### **Picky Eater Project**

Parents of babies in the NICU will become more informed partners in care with this essential resource and beautiful keepsake. The spiral-bound journal provides educational content and a place for parents to record their baby's progress. Parents are encouraged to track their baby's condition week-to-week and to commemorate special moments along the way. Journaling prompts remind parents to record their infant's vital statistics and jot down questions to ask the medical team. The journal also includes helpful information on common issues and questions in the NICU, as well as an overview of developmental milestones. A self-care section offers tips for parents

on coping during this stressful time. A glossary of NICU terms and a checklist for bringing baby home round out the NICU Journal.

### **Red Book 2018**

From the files of "NeoReviews" comes this collection of Perinatal Profiles, chosen to provide a glimpse into the lives of the movers and shakers in neonatal/perinatal medicine. Many of the profiles in this collection were written by the students of these pioneers who have gone on to become key NPM innovators themselves. They provide rare insight into the personalities of their mentors and the development of NPM. You'll meet such luminaries as: Alex Minkowski, MD, whose life's work, including a conference on whether assisted ventilation did more harm than good, led French President Jacques Chirac in 2004 to call him one of the consciences of the 20th century. Martin Couney, MD, who in 1896 began 40 years of organizing preterm baby child hatchery sideshows to showcase the marvels of incubator technology at expositions, state fairs, traveling circuses even Coney Island showing the public that even the most severely preterm infants had a chance for survival. Elizabeth Blackwell, Marie Putnam Jacobi, Elizabeth Garret, and Madeleine Bres, the first female physicians caring for women and children at the end of the 19th century. All struggled for admission to medical school yet eventually managed to pierce the armor of sex bias. Ignac Fulop Semmelweis, the Hungarian pioneer of antisepsis who first demonstrated that most childbed fever cases could

be prevented one of the most important discoveries of 19th-century medicine yet was ridiculed and released in disgrace from his Viennese hospital and medical school faculty posts. Cathy Cropley, the Seattle nurse who wove nurses into the fabric of neonatal resuscitation as team members and instructors, insisting that skill take precedence over title. This collection of 26 key columns was compiled and edited by NeoReviews Editor-in-Chief Alistair G.S. Philip, MD, FRCPE, FAAP, in honor of the 15th anniversary of "NeoReviews," the American Academy of Pediatrics online journal of neonatology, available at <http://www.neoreviews.org>. "

immunizations, and safety.

## **Challenging Cases in Pediatric Cardiology**

When a novel influenza A virus with pandemic potential emerges, nonpharmaceutical interventions (NPIs) often are the most readily available interventions to help slow transmission of the virus in communities, which is especially important before a pandemic vaccine becomes widely available. NPIs, also known as community mitigation measures, are actions that persons and communities can take to help slow the spread of respiratory virus infections, including seasonal and pandemic influenza viruses. These guidelines replace the 2007 Interim Pre-pandemic Planning Guidance: Community Strategy for Pandemic Influenza Mitigation in the United States - Early, Targeted, Layered Use of Nonpharmaceutical Interventions (<https://stacks.cdc.gov/view/cdc/11425>). Several elements remain unchanged from the 2007 guidance, which described recommended NPIs and the supporting rationale and key concepts for the use of these interventions during influenza pandemics. NPIs can be phased in, or layered, on the basis of pandemic severity and local transmission patterns over time. Categories of NPIs include personal protective measures for everyday use (e.g., voluntary home isolation of ill persons, respiratory etiquette, and hand hygiene); personal protective measures reserved for influenza pandemics (e.g., voluntary home quarantine of exposed household members and use of face masks in

community settings when ill); community measures aimed at increasing social distancing (e.g., school closures and dismissals, social distancing in workplaces, and postponing or canceling mass gatherings); and environmental measures (e.g., routine cleaning of frequently touched surfaces). Several new elements have been incorporated into the 2017 guidelines. First, to support updated recommendations on the use of NPIs, the latest scientific evidence available since the influenza A (H1N1)pdm09 pandemic has been added. Second, a summary of lessons learned from the 2009 H1N1 pandemic response is presented to underscore the importance of broad and flexible prepandemic planning. Third, a new section on community engagement has been included to highlight that the timely and effective use of NPIs depends on community acceptance and active participation. Fourth, to provide new or updated pandemic assessment and planning tools, the novel influenza virus pandemic intervals tool, the Influenza Risk Assessment Tool, the Pandemic Severity Assessment Framework, and a set of prepandemic planning scenarios are described

## **Red Book**

Although epilepsy is one of the nation's most common neurological disorders, public understanding of it is limited. Many people do not know the causes of epilepsy or what they should do if they see someone having a seizure. Epilepsy is a complex spectrum of disorders that affects an estimated 2.2 million

Americans in a variety of ways, and is characterized by unpredictable seizures that differ in type, cause, and severity. Yet living with epilepsy is about much more than just seizures; the disorder is often defined in practical terms, such as challenges in school, uncertainties about social situations and employment, limitations on driving, and questions about independent living. The Institute of Medicine was asked to examine the public health dimensions of the epilepsies, focusing on public health surveillance and data collection; population and public health research; health policy, health care, and human services; and education for people with the disorder and their families, health care providers, and the public. In *Epilepsy Across the Spectrum*, the IOM makes recommendations ranging from the expansion of collaborative epilepsy surveillance efforts, to the coordination of public awareness efforts, to the engagement of people with epilepsy and their families in education, dissemination, and advocacy for improved care and services. Taking action across multiple dimensions will improve the lives of people with epilepsy and their families. The realistic, feasible, and action-oriented recommendations in this report can help enable short- and long-term improvements for people with epilepsy. For all epilepsy organizations and advocates, local, state, and federal agencies, researchers, health care professionals, people with epilepsy, as well as the public, *Epilepsy Across the Spectrum* is an essential resource.

Medical liability continues to be a fact of life for pediatricians. One third of pediatricians will be sued for medical liability over the course of their careers. Pediatricians need to be aware of this fact and take steps to reduce the likelihood of being sued. *Medicolegal Issues in Pediatrics*, offers a wide range of medicolegal topics that affect the practice of pediatrics from residency through retirement. It provides pediatricians with detailed information on common pediatric malpractice claims and specific risk management strategies to reduce the threat of being sued and make it easier to defend a claim. In addition, it explains in simple language the anatomy of a malpractice lawsuit, guidance for coping with malpractice litigation stress, and the basics of professional liability insurance for pediatricians. Resources for managing the specific risks of newborn care, adolescent care, and pediatric emergency medicine are included. New to this edition are chapters on the medicolegal risks associated with the

reporting of child abuse and neglect, health care fraud and abuse, and an expanded chapter on patient safety. Other highlights include: " Telephone and on-call care " Legal issues relating to email, Web sites, and telemedicine " Documentation of pediatric care " Liability for vaccine administration " Testifying as an expert witness " Volunteer activities Table of Contents Overview of Medical Liability Anatomy of a Medical Malpractice Lawsuit and the Defendent Pediatrician Professional Liability Insurance Risk Management Telephone and On-call Care Legal Issues Relating to E-mail, Web Sites, and Telemedicine Liability for Vaccine Administration Newborn Care Adolescent Health Care Pediatric Emergency Medicine Documenting Pediatric Care Medical Liability Experiences of Pediatricians Coping with Malpractice Litigation Stress Testifying as an Expert Witness Resolving Malpractice Disputes Without Litigation: Alternative Dispute Resolution Pediatric Patient Safety Medical Licensure, Specialty Boards, and Practitioner Data Banks Career Transitions: Residency Through Retirement Volunteer Activities Medical Liability and Child Abuse Health Care Fraud, Wast, and Abuse
