This book provides a comparative analysis of the social, economic, industrial and migration dynamics that structure women's paid work and unpaid care work experience in the Asia-Pacific region. Each country-focused chapter examines the formal and informal ways in which work and care are managed, the changing institutional landscape, gender relations and fertility concerns, employer and trade union responses and the challenges policy makers face and the consequences of their decisions for working women. By covering the entire region, including Australia and New Zealand, the book highlights the way different national work and care regimes are linked through migration, with wealthier countries looking to their poorer neighbours for alternative sources of labour. In addition, the book contributes to debates about the barriers to women's participation in the workforce, the valuation of unpaid care, the gender wage gap, social protection and labour regulation for migrant workers and gender relations in developing Asia.

Hydrogen Power: Theoretical and Engineering Solutions

Marketing High Profit Product/Service Solutions addresses one of the most exciting and growing strategic marketing opportunities facing product and service companies - 'bundling'. Many customers want bundled products and services which represent integrated solutions to their problems, rather than buying individual products and services piecemeal, and if you become that supplier it can transform a company. There are many outstanding examples: Magna International grew in several stages from a supplier of basic individual auto parts to a company manufacturing a product/service 'super-bundle'; ultimately sourcing and assembling the entire car itself. GE developed their business involving the supply of medical imaging machines to hospitals to become a 'super-bundler' of complete hospital radiological floor imaging operations planning, installation, and integration. IBM transformed their position as a supplier of individual hardware, software, and peripherals to companies into a product/service solution 'bundler' of increasing complexity, and finally into the 'super-bundle' of BPO (Business Process Outsourcing); representing an outsourced and complete integrated IT solution set for clients' entire global operations. Roger More explores what was learned by these leading companies (amongst others) when they transformed their market strategies to become bundlers of complex integrated customer solutions. Over many years the author has developed and tested new concepts, maps and tools for use by a wide variety of managers in developing strategies for these bundled product/service solutions. His book now offers these maps and tools to all who invest in a copy.

LAXTON'S BUILDING PRICE

United States Code Service, Lawyers Edition

Quality Progress

New Hampshire Register, State Yearbook and Legislative Manual

Now in its 179th edition, Laxton's has become a firm favourite in the UK Building Industry. With more prices and more in-depth build-ups, Laxton's offers more practical and complete information than any other price book available. This new edition takes into account major price variations that stem from raw material costs in the last few months. * Higher-fuel costs have impacted on prices across the board, in particular costs of non-ferrous metals in increased * Copper sheet and pipe show price increases of well above 50% in the last year, while zinc, lead and aluminium prices have also risen significantly * There are savings in plaster and drainage goods, prices are down All the prices in Laxton's are based on the new 3 year Construction Industry Joint council wage rate agreement that came into force at the end of June 2006 *Saving you time - comprehensive basic price and approximate estimating sections make putting together outline costings quicker and easier *Saving you effort - all the information you need on each measured item is clearly set out on a single page, with a full break down of costs *Saving you money - all 250,000 prices are individually checked and updated to make sure that your tender costs are precise

This book presents a mathematical treatment of the radio resource allocation of modern cellular communications systems in contested environments. It focuses on fulfilling the quality of service requirements of the living applications on the user devices, which leverage the cellular system, and with attention to elevating the users' quality of experience. The authors also address the congestion of the spectrum by allowing sharing with the band incumbents while providing with a quality-of-service-minded resource allocation in the network. The content is of particular interest to telecommunications scheduler experts in industry, communications applications academia, and graduate students whose paramount research deals with resource allocation and quality of service.

Relay systems have become a subject of intensive research interest over the recent years, as it is recognized that they can improve performances and extend the coverage area of wireless communication systems. Special attention has been dedicated to them since the proposal appeared for their implementation in mobile cellular systems. Numerous researches conducted after that proposal have enabled incorporation of OFDM based relay systems in both accepted standards for IMT-Advanced systems. Nowadays, researches are ongoing with the aim to define new solutions for performance improvement of the standardized OFDM relay systems for cellular networks and one of the interesting solutions is implementation of subcarrier permutation (SCP) at the relay (R) station. The book "OFDM based relay systems for future wireless communications" presents a comprehensive research results in analyzing behavior and performance of the OFDM based relay systems with SCP. Dual-hop relay scenario with three communication terminals, and no direct link between the source (S) and the destination (D) has been analyzed, as it is compliant with the accepted solutions for IMT-Advanced systems. The book includes performance analysis and performance comparison of OFDM based: amplify-and-forward (AF) relay systems with fixed gain (FG), amplify-and-forward (AF) relay systems with variable gain (VG), decode-and-forward (DF) relay systems, each including two SCP schemes, known to maximize the system capacity and/or improve the bit error rate (BER) performances. Performance comparisons have enabled definition of optimal solutions for the future wireless communication systems in a given conditions, and for the given optimality criteria. OFDM based relay systems for future wireless communications contains recent research results in this area and is ideal for the academic staff and master/research students in area of mobile communication systems, as well as for the personnel in communication industry. Contents: 1. Introduction; 2. General overview of relay techniques; 3. OFDM relay systems; 4. Relay stations in wireless cellular networks; 5. Performance of OFDM AF FG relay systems with subcarrier permutation; 6. Performance of OFDM AF VG relay systems with subcarrier permutation; 7. Performance of OFDM DF relay systems with subcarrier permutation; List of Abbreviations

Engineering Record

AUTOMOTIVE TECHNOLOGY: A SYSTEMS APPROACH, 5th Edition remains the leading authority on automotive theory, service and repair procedures. The new edition has been updated to include coverage of hybrid vehicles throughout the text, new content on electronic automatic transmissions, preventive maintenance, and many other topics that reflect the most recent changes in the industry. Chapters cover the theory, diagnosis and service of all system areas for automobiles and light trucks, and the content closely adheres to the 2008 NATEF Automobile Program Standards. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

This volume contains selected contributions to the second Hydrogen Power, Theoretical and Engineering Solutions, International Symposium (HYPOTHESIS II), held in Grimstad, Norway, from 18 to 22 August, 1997. The more than one hundred papers submitted to this conference represent the efforts of research groups from all over the world. The contributions reflect the progress that has been achieved in hydrogen technology aimed primarily at hydrogen as the ultimate energy vector. This research has already yielded mature technologies for mass production in many areas. These results will be of increased interest and importance as global and local environmental issues move higher up the political agenda. This volume yields a comprehensive review of the most relevant areas of hydrogen technology, making it an asset for all researchers and students interested in these subjects. The papers are organised into the following sections: transportation, hydrogen production, hydrides, safety, hydrogen systems, liquid hydrogen and fuel cells.
