Hip-hop culture has grown from its humble beginnings in the South Bronx section of New York City into a significant and influential cultural movement. This volume examines the rich history and promising future of this musical genre. Created in the mid-1970s by poor Bronx residents with few resources, hip-hop has become a billion-dollar industry whose reach now stretches around the world. Hip-hop has influenced the way people make music, the way they dance, and the way they wear their clothes. It has also shaped people's political views and turned many people into entrepreneurs.

Fundamental solutions in understanding information have been elusive for a long time. The field of Artificial Intelligence has

proposed the Turing Test as a way to test for the "smart" behaviors of computer programs that exhibit human-like qualities. Equivalent to the Turing Test for the field of Human Information Interaction (HII), getting information to the people that need them and helping them to understand the information is the new challenge of the Web era. In a short amount of time, the infrastructure of the Web became ubiquitous not just in terms of protocols and transcontinental cables but also in terms of everyday devices capable of recalling network-stored data, sometimes wirelessly. Therefore, as these infrastructures become reality, our attention on HII issues needs to shift from information access to information sensemaking, a relatively new term coined to describe the process of digesting information and understanding its structure and intricacies so as to make decisions and take action.

Minimalism as a concept was first used in the world of art to characterize the work of Donald Judd, Sol Le Witt and several others. Soon afterwards, this creative approach began to take hold in architecture, and the works of many contemporary architects are rooted in Minimalism to a greater or lesser degree. This publication goes to the heart of this trend, looking first at Loos, Wittgenstein, Mies van der Rohe, and Asplund, the definitive precursors of Minimalism. Then the works of today's protagonists, who include Tadao Ando, Luìs Barragàn, Alberto Campo Baeza, A.G. Fronzoni, Michael Gabellini, John Pawson, Claudio Silvestrin, Eduardo Souto Moura, and Peter Zumthor are covered extensively. A selection of texts contributed by the featured architects conclude the volume. With a clear even austere presentation, this book not only reflects its contents but provides a comprehensive overview of Minimalism, one of the dominant trends in contemporary architecture.

A dangerous case with ties leading back to the battlefields of World War I dredges up dark memories for Scotland Yard Inspector Ian Rutledge in *Hunting Shadows*, a gripping and atmospheric historical mystery set in 1920s England, from acclaimed New York Times bestselling author Charles Todd. A society wedding at Ely Cathedral in Cambridgeshire becomes a crime scene when a man is murdered. After another body is found, the baffled local constabulary turns to Scotland Yard. Though the second crime had a witness, her description of the killer is so strange its unbelievable. Despite his experience, Inspector Ian Rutledge has few answers of his own. The victims are so different that there is no rhyme or reason to their deaths. Nothing logically seems to connect them—except the killer. As the investigation widens, a clear suspect emerges. But for Rutledge, the facts still don't add up, leaving him to question his own judgment. In going over the details of the case, Rutledge is reminded of a dark episode he witnessed in the war. While the memory could lead him to the truth, it also raises a prickly dilemma. To stop a murderer, will the ethical detective choose to follow the letter—or the spirit—of the law?

This title argues that Noam Chomsky's Minimalist Program is deeply flawed. Seuren points to the original acrimonious split in the 1960s and 1970s between Chomsky's generative grammar and the alternative generative semantics proposed by his followers, and argues that the latter theory was sounder and unfairly suppressed.

The notion of Minimalism is proposed as a theoretical tool supporting a more differentiated understanding of reduction and thus forms a standpoint that allows definition of aspects of simplicity. Possible uses of the notion of minimalism in the field of human-computer interaction design are examined both from a theoretical and empirical viewpoint, giving a range of results. Minimalism defines a radical and potentially useful perspective for design analysis. The empirical examples show

that it has also proven to be a useful tool for generating and modifying concrete design techniques. Divided into four parts this book traces the development of minimalism, defines the four types of minimalism in interaction design, looks at how to apply it and finishes with some conclusions.

“Web Engineering: Modelling and Implementing Web Applications” presents the state of the art approaches for obtaining a correct and complete Web software product from conceptual schemas, represented via well-known design notations. Describing mature and consolidated approaches to developing complex applications, this edited volume is divided into three parts and covers the challenges web application developers face; design issues for web applications; and how to measure and evaluate web applications in a consistent way. With contributions from leading researchers in the field this book will appeal to researchers and students as well as to software engineers, software architects and business analysts.

### **The History of Rap and Hip-Hop**

Human-Centered Software Engineering: Bridging HCI, Usability and Software Engineering From its beginning in the 1980's, the field of human-computer interaction (HCI) has been defined as a multidisciplinary arena. By this I mean that there has been an explicit recognition that distinct skills and perspectives are required to make the whole effort of designing usable computer systems work well. Thus people with backgrounds in Computer Science (CS) and Software Engineering (SE) joined with people with backgrounds in various behavioral science disciplines (e. g. , cognitive and social psychology, anthropology) in an effort where all perspectives were seen as essential to creating usable systems. But while the field of HCI brings individuals with many background disciplines together to discuss a common goal - the development of useful, usable, satisfying systems - the form of the collaboration remains unclear. Are we striving to coordinate the varied activities in system development, or are we seeking a richer collaborative framework? In coordination, Usability and SE skills can remain quite distinct and while the activities of each group might be critical to the success of a project, we need only insure that critical results are provided at appropriate points in the development cycle. Communication by one group to the other during an activity might be seen as only minimally necessary. In collaboration, there is a sense that each group can learn something about its own methods and processes through a close partnership with the other. Communication during the process of gathering information from target users of a system by usability professionals would not be seen as something that gets in the way of the essential work of software engineering professionals.

### **The Pleasures of Life**

It is well known that Jorge Luis Borges was a translator, but this has been considered a curious minor aspect of his literary achievement. Few have been aware of the number of texts he translated, the importance he attached to this activity, or the extent to which the translated works inform his own stories and poems. Between the age of ten, when he translated Oscar Wilde, and the end of his life, when he prepared a Spanish version of the Prose Edda, Borges transformed the work of Poe, Kafka, Hesse, Kipling, Melville, Gide, Faulkner, Whitman, Woolf, Chesterton, and many others. In a multitude of essays, lectures, and interviews Borges analyzed the versions of others and developed an engaging view about translation. He held that a translation can improve an original, that contradictory renderings of the same work can be equally valid, and that an original can be unfaithful to a translation. Borges's bold habits as translator and his views on translation had a decisive impact on his creative process. Translation is also a recurrent motif in Borges's stories. In "The Immortal," for example, a character who has lived for many centuries regains knowledge of poems he had authored, and almost forgotten, by way of modern translations. Many of Borges's fictions include actual or imagined translations, and some of his most important characters are translators. In "Pierre Menard, author of the Quixote," Borges's character is a respected Symbolist poet, but also a translator, and the narrator insists that Menard's masterpiece-his "invisible work"-adds unsuspected layers of meaning to Cervantes's Don Quixote. George Steiner cites this short story as "the most acute, most concentrated commentary anyone has offered on the business of translation." In an age where many discussions of translation revolve around the dichotomy faithful/unfaithful, this book will surprise and delight even Borges's closest readers and critics.

### **Human-Centered Software Engineering - Integrating Usability in the Software Development Lifecycle**

Normative conflicts center on fundamental disagreements over issues of public morality and the identity of a society. In thinking about normative conflicts on a global scale, two principal questions arise. First, are there common characteristics of such conflicts worldwide? Second, which institutions polarize such conflicts and which can serve to mediate them? This pathbreaking book, edited by renowned sociologist Peter Berger, examines both questions through findings gained from a study of normative conflicts in eleven societies located in different parts of the world and at different levels of economic development. On both points, the findings have proved surprising. Although there are, of course, normative conflicts peculiar to individual societies, two features emerged as common to most of the societies examined: one concerns disputes over the place of religion in the state and in public life; the other is a clash of values between a cultural elite and the broad masses of the population. Often the two features coincide. For instance, in many countries the elite is the least religious

group within the population, and therefore, resentments against the elite are often mobilized under religious banners. On the institutional question, the study started out with a bias toward the institutions of so-called "civil society"—that is, the institutions that stand between the personal life of individuals and the vast mega-structures of a modern society. The finding is that the same institutions can either polarize or mediate normative conflicts. The conclusion suggests one must ask not just what sort of institutions one looks to for social cohesion, but what ideas and values inspire these institutions. Comprising reports from some of the leading scholars dealing with normative conflict, this book is an important contribution to understanding the cultural fault lines that threaten social cohesion.

I HAVE determined to write a book upon clemency, Nero Caesar, in order that I may as it were serve as a mirror to you, and let you see yourself arriving at the greatest of all pleasures. For although the true enjoyment of good deeds consists in the performance of them, and virtues have no adequate reward beyond themselves, still it is worth your while to consider and investigate a good conscience from every point of view, and afterwards to cast your eyes upon this enormous mass of mankind - quarrelsome, factious, and passionate as they are; likely, if they could throw off the yoke of your government, to take pleasure alike in the ruin of themselves and of one another - and thus to commune with yourself: - "Have I of all mankind been chosen and thought fit to perform the office of a god upon earth?"

The Church is in a season of profound change. The birth pangs of transition are changing the order of "what is" into a Church that can do the will of God in the midst of a difficult environment. By nature, labor produces a violent change from the old to the new, and it has left some churches broken and bewildered. We must discern between the work of the enemy and the work of the Holy Spirit. In essence, transition forms the rite of passage from one dimension of the Spirit to another. This book details the elements of that changing process. "[This book] bristles with heart-searching demands for a people who will be found ready in a day of God's power and prevailing presence." - Tony Morton

Bowen asks not the usual question--how well are Muslims integrating in France?--but, rather, how do French Muslims think about Islam? In particular, Bowen examines how French Muslims are fashioning new Islamic institutions and developing new ways of reasoning and teaching. He looks at some of the quite distinct ways in which mosques have connected with broader social and political forces, how Islamic educational entrepreneurs have fashioned niches for new forms of schooling, and how major Islamic public actors have set out a specifically French approach to religious norms. --from publisher description

This book studies how Borges constructs a theory of translation that plays a fundamental role in the development of Argentine literature, and which, in turn, expands the potential for writers in Latin America to create new and innovative literatures through processes of re-reading, rewriting, and mis-translation. The book analyzes Borges's texts in both an Argentine and a transnational context, thus incorporating Borges's ideas into contemporary debates about translation and its relationship to language and aesthetics, Latin American culture and identity, tradition and originality, and center-periphery dichotomies. Furthermore, a central objective of this book is to show that the study of the importance of translation in Borges and of the importance of Borges for translation studies need not be separated. Furthermore, translation studies has much to gain by the inclusion of Latin American thinkers such as Borges, while literary studies has much to gain by in-depth considerations of the role of translation in Latin American literatures. Sergio Waisman is an Assistant Professor of Spanish at The George Washington University.

This book, a fascinating companion to *The Secret Life of Plants* by the same authors, tells the story of the innovative, nontraditional, often surprising things that certain scientists, farmers, and mystics are doing to prevent the slow degradation of our planet. For example, using the techniques of Rudolf Steiner's biodynamic agriculture with its reliance on ethereal forces from the planets, Dan Carlson's growth stimulating *Sonic Bloom*, and rock dust fertilizer to revitalize depleted soils; or gardening with the help of truly amazing new technologies to reverse serious agricultural problems. The authors illustrate, in a truly enlightening and convincing manner, the pivotal role that the natural elements play in our lives, and the necessity of cultivating and sustaining a relationship with one most basic of them the soil.

### **Invisible Work**

TV viewers today are exposed to overwhelming amounts of information, and challenged by the plethora of interactive

functionality provided by current set-top boxes. To ensure broad adoption of this technology by consumers, future Digital Television will have to take usability issues thoroughly into account. In particular, serious attention must be paid to facilitate the selection of content on an individual basis, and to provide easy-to-use interfaces that satisfy viewers' interaction requirements. This volume collects selected research reports on the development of personalized services for Interactive TV. Drawing upon contributions from academia and industry in the US, Europe and Asia, this book represents a comprehensive picture of leading edge research in personalized television.

How do you design personalized user experiences that delight and provide value to the customers of an eCommerce site? Personalization does not guarantee high quality user experience: a personalized user experience has the best chance of success if it is developed using a set of best practices in HCI. In this book 35 experts from academia, industry and government focus on issues in the design of personalized web sites. The topics range from the design and evaluation of user interfaces and tools to information architecture and computer programming related to commercial web sites. The book covers four main areas: -Theoretical, Conceptual, and Architectural Frameworks of Personalization, -Research on the Design and Evaluation of Personalized User Experiences in Different Domains, -Approaches to personalization Through Recommender Systems, -Lessons Learned and Future Research Questions. This book will be a valuable tool in helping the reader to understand the range of factors to take into consideration in designing and building a personalized user experience. The authors of each of the chapters identify possibilities and alert the reader to issues that can be addressed in the beginning of a project by taking a 'big picture' view of designing personalized user interfaces. For anyone working or studying in the field of HCI, information architecture or eCommerce, this book will provide a solid foundation of knowledge and prepare for the challenges ahead.

### **Designing Personalized User Experiences in eCommerce**

User-adaptive (or "personalized") systems take individual characteristics of their current users into account and adapt their behavior accordingly. Several empirical studies demonstrate their benefits in areas like education and training, online help for complex software, dynamic information delivery, provision of computer access to people with disabilities, and to some extent information retrieval. Recently, personalized systems have also started to appear on the World Wide Web where they are primarily used for customer relationship management. The aim hereby is to provide value to customers by serving them as individuals and by offering them a unique personal relationship with the business. Studies show that web visitors indeed spend considerably more time at personalized than at regular portals and view considerably more web pages. Personalized sites in general also draw more visitors and turn more visitors into buyers. Personalization therefore would

look like a win-win technology for both consumers and online businesses. However, it has a major down side: in order to be able to exhibit personalized behavior, user-adaptive systems have to collect considerable amounts of personal data and "lay them in stock" for possible future usage. Moreover, the collection of information about the user is often performed in a relatively inconspicuous manner (such as by monitoring users' web navigation behavior), in order not to distract users from their tasks.

Embodied conversational agents (ECAs) are autonomous software entities with human-like appearance and communication

skills. These agents can take on a number of different roles, for example, as an assistant, tutor, information provider, or customer service agent. They may also simply represent or entertain a user. The precise nature and benefits of different characteristics of ECAs requires careful investigation. Questions range from the function of an eyebrow raise to mechanisms for assessing and improving ECA trustworthiness. This book will help experts and designers in the specification and development of applications incorporating ECAs. Part 1 provides guidelines for evaluation methodologies and the identification of design and evaluation parameters. Part 2 demonstrates the importance of considering the user's perspective and interaction experience. Part 3 addresses issues in fine-tuning design parameters of ECAs and verifying the perceived effect. Finally, in Part 4 lessons learned from a number of application case studies are presented. The book is intended for both ECA researchers in academia and industry, and developers and designers interested in applying the technology.
