Accounting For Management

Principles of Accounting/Principles of Accounting

This book discusses the principles, practices, and uses of accounting in making business decisions. It aims at discussing all the three categories of accounting – financial accounting, cost accounting, and management accounting-that are closely interlinked and vital for managerial decision making. Written in a simple and lucid language with ample illustrations and solved examples, this book will be

useful for even those students who do not have any previous knowledge of the subject. Real life cases and examples, and rich pedagogy will make the learning easy and interesting.

The Nature of Accounting Regulation

Accounting standards are an essential element in the regulation of current financial reporting. Standard setters promulgate such standards, and companies and professional accountants follow them in preparing financial reports. Although much has been written about the history of standard setting, the conceptual underpinnings of accounting standards, the process of setting them, and whether such standards should be 'rules-based' or 'principles-based,' there has been little written about the kind of thing they are. This book examines the nature of accounting standards and the very idea of a rule, of implementation guidance, and of the objectives that are included in them. It enables the reader to grasp the reasons for promulgating standards, the role of the conceptual framework in setting standards in an institutional context, and the kind of rules that are useful in regulating financial reporting. The insights provided by this examination are used to throw light on the distinction between 'principles-based' and 'rules-based' standards and on the nature of 'good' accounting standards.'
