From environmental remediation to alternative fuels, this book explores the numerous important applications of photocatalysis. The book covers topics such as the photocatalytic processes in the treatment of water and air; the fundamentals of solar photocatalysis; the challenges involved in developing self-cleaning photocatalytic materials; photocatalytic hydrogen generation; photocatalysts in the synthesis of chemicals; and photocatalysis in food packaging and biomedical and medical applications. The book also critically discusses concepts for the future of photocatalysis, providing a fascinating insight for researchers. Together with *Photocatalysis: Fundamentals and Perspectives*, these volumes provide a complete overview to photocatalysis.

This textbook is written for meteorology majors who require an initial introduction to the physical properties of the atmosphere and to the essential principles and real-world applications of atmospheric thermodynamics. These topics are supplemented by a sampling of techniques and technologies related to atmospheric measurements and observations. A unique tutorial, included as an appendix, teaches students how to attack physical problems symbolically, deferring numerical calculations until the final step in the solution. The author's overall objectives include not only covering the traditional core subject matter of an undergraduate thermodynamics course but also facilitating students' transition from a purely abstract understanding of calculus and physics concepts to the confident application of both to the science of meteorology.

AN INCREDIBLE DISCOVERY. A MERCILESS FOE. A DEADLY RACE FOR THE TRUTH. Off a remote stretch of the Indonesian coast, archaeologist Nina Wilde has made an astounding discovery: an artifact that will rewrite everything that's known about human history. But before she can return to tell the world of her find, her ship is brutally attacked, her crew is ruthlessly murdered, and the artifact is stolen. Someone wants this secret to stay hidden—and will do anything to keep it that way. From the depths of the ocean to the Australian outback to the halls of the United Nations, Nina and her fiancé, ex-SAS bodyguard Eddie Chase, embark on a quest to stop the all-powerful Covenant of Genesis, a clandestine group sworn to keep Nina's discovery a secret. Nina and Eddie have faced tough adversaries before, but the relentless Covenant is

always two steps ahead of them—and more than willing to kill again. Who will be the first to expose the truth—and claim the most valuable archaeological prize of all time? Enter *The Covenant of Genesis* And discover an action-packed thrill ride that will keep you reading long into the night! From the Paperback edition.

L'Industrie du pétrole en Europe, gaz-chimie

This updated edition of a widely admired text provides a user-friendly introduction to the field that requires only routine mathematics. The book starts with the elements of fluid mechanics and heat transfer, and covers a wide range of applications from fibrous insulation and catalytic reactors to geological strata, nuclear waste disposal, geothermal reservoirs, and the storage of heat-generating materials. As the standard reference in the field, this book will be essential to researchers and practicing engineers, while remaining an accessible introduction for graduate students and others entering the field. The new edition features 2700 new references covering a number of rapidly expanding fields, including the heat transfer properties of nanofluids and applications involving local thermal non-equilibrium and microfluidic effects.

safety and health processes and make fact-based decisions that continually improve overall performance. Newly updated, this edition now also shows you how to incorporate safety management system components into your safety performance program and provides you with additional techniques for analyzing safety performance data. Written for safety professionals with limited exposure to statistics and safety-performance-measurement strategies, this comprehensive book shows you how to assess trends, inconsistencies, data, safety climates, and training in your workplace so you can identify areas that need corrective actions before an accident or injury occurs. To help you develop an effective safety metrics program, the author includes both an overview of safety metrics, data collection, and analysis and a set of detailed procedures for collecting data, analyzing it, and presenting it. You'll examine a comprehensive collection of tools and techniques that includes run charts and control charts, trending and forecasting, benchmarking, insurance rating systems, performance indices, the Baldrige Model, and six sigma. In addition, you'll find exercises and questions in each chapter that allow you to practice and review what you've learned. All answers are provided in an appendix. Techniques and tools discussed in this book include descriptive and inferential statistics, cause and effect analyses, measures of variability, and probability. Safety metric program development, implementation, and evaluation techniques are presented as well.

Grainger

This book presents a counter-view, based on a survey of several thousand young persons and adults, probing attitudes, beliefs, feelings, and perceptions of risk associated with smoking. The authors agree that young smokers give little or no thought to health risks

or the problems of addiction. The survey data contradicts the model of informed, rational choice and underscores the need for aggressive policies to counter tobacco firms' marketing and promotional efforts and to restrict youth access to tobacco.

In this thoroughly revised edition of *My House Is Killing Me!* Jeffrey C. and Connie L. May draw on the dramatic personal stories of their clients to help readers understand the links between indoor environmental conditions and human health. Explaining how air conditioning, finished basements, and other home features affect indoor air quality, the authors offer a step-by-step approach to identifying, controlling, and even eliminating the sources of indoor pollutants and allergens. This new edition includes

- more than 60 color photographs
- expanded coverage on the dangers posed by volatile organic compounds (VOCs) produced by such common items as paint, carpet, and household cleaning products
- up-to-date information on the potential risks of installing spray polyurethane foam (SPF) insulation
- completely new case studies of people who improved their indoor air quality by following the authors' advice
- brand-new chapters, including " 'Trojan Horse' Allergens," "The Three Ps—Pets, Pests, and People," "Indoor Air Quality in
