Zimbabwe: The Blame Game

Atomic Power With God Thru Fasting and Prayer, first published in 1946 by Franklin Hall, describes how prayer during extended fasts can heal the body and soul, and bring practitioners greater spiritual power to exalt and glorify Jesus Christ.

Forms Manual to Accompany Cases and Materials on Oil and Gas Law

The Blame Game is a cycle of creative non-fiction pieces, pulling the readers through the politics of modern day Zimbabwe. Like in any game, there are players in this game, opposing each other. The game is told through the eyes of one of the players, thus it is subjective. It centres on truthfully trying to find who to blame for Zimbabwe's problems, and how to undo all these problems. Finding who to blame should be the beginning for the search of solutions. It encourages talking to each other, maybe about the wrongs we have done to each other, and genuinely trying to embrace and forgive each other. In trying to undo the problems in Zimbabwe, it also offers insight or solutions on a larger platform - Africa: particularly South Africa; that it might learn from other African countries that have imploded before it, how to solve its own problems.

An Introduction to Sociology

Family historians depend upon thousands of people unknown to them. They exchange research with others; copy information from books and databases; and write libraries, societies, and government offices. At times they even hire professionals to do legwork in distant areas and trust strangers to solve important problems. But how can a researcher be assured that he or she is producing or receiving reliable results? This official manual from the Board of Certification for Genealogists provides a standard by which all genealogists can pattern their work.

The principal function of this forms manual is to illustrate the exceptional importance of specific language to all contract-based transactions. Unintended ambiguities or carelessness in wording may result in the loss of properties worth millions of dollars. Additionally, differences in state law, regional custom, the identity and interests of the client, and the peculiarities of the specific transaction require a lawyer to choose carefully which form to use as the basis of the transaction. For this reason, there are often included several forms for the same transaction.

This is an exciting revision of John Kraus' classic book Antennas, which has been long known as the "Antenna Bible". A new co-author, Ronald Marhefka has joined the author team for this revision. Many new, modern applications have been added- thus the title change to Antennas with All Applications. As well, the references have been updated to include recent additions to the literature. Additionally, the book has been reorganized to make it more user-friendly for both students and professionals. The book now covers the fundamentals of various antennas and

concepts in the first half of the book and then gets into more details on those same topics later in the book. This allows a one-semester course to just cover the fundamentals if desired, and a professional to focus on advanced topics if he or she wants.

This volume forms a collection of papers tracking the emergence of the history of archaeology from a subject of marginal status in the 1980s to the mainstream subject which it is today. Professor Timothy Murray's essays have been widely cited and track over 20 years in the development of the subject. The papers are accompanied by a new introduction which surveys the development of the subject over the last 25 years as well as a reflection of what this means for the philosophy of archaeology and theoretical archaeology. This volume spans Tim's successful career as an academic at the forefront of the study of the history of archaeology, both in Australia and internationally. During his career he has held posts in Britain and Europe as well as Australia. He has edited The Bulletin of the History of Archaeology since 2003.

Till the Last Breath . . .

Once again keeping a keen ear to the needs of the evolving calculus community, Stewart created this text at the suggestion and with the collaboration of professors in the mathematics department at Texas A&M University. With an early introduction to vectors and vector functions, the approach is ideal for engineering students who use vectors early in their curriculum. Stewart begins by introducing vectors in Chapter 1, along with their basic operations, such as addition, scalar multiplication, and dot product. The definition of vector functions and parametric curves is given at the end of Chapter 1 using a two-dimensional trajectory of a projectile as motivation. Limits, derivatives, and integrals of vector functions are interwoven throughout the subsequent chapters. As with the other texts in his Calculus series, in Early Vectors Stewart makes us of heuristic examples to reveal calculus to students. His examples stand out because they are not just models for problem solving or a means of demonstrating techniques - they also encourage students to develop an analytic view of the subject. This heuristic or discovery

approach in the examples give students an intuitive feeling for analysis.

Motivated by potentially turning Flushing Meadows, literally a land of refuse, into his greatest public park, Robert Moses—New York's "Master Builder"—brought the World's Fair to the Big Apple for 1964 and '65. Though considered a financial failure, the 1964-65 World's Fair was a Sixties flashpoint in areas from politics to pop culture, technology to urban planning, and civil rights to violent crime. In an epic narrative, the New York Times bestseller *Tomorrow-Land* shows the astonishing pivots taken by New York City, America, and the world during the Fair. It fetched Disney's empire from California and Michelangelo's *La Pieta* from Europe; and displayed flickers of innovation from Ford, GM, and NASA—from undersea and outerspace colonies to personal computers. It housed the controversial work of Warhol (until Governor Rockefeller had it removed); and lured Ken Kesey and the Merry Pranksters. Meanwhile, the Fair—and its house band, Guy Lombardo and his Royal Canadians—sat in the musical shadows of the Beatles and Bob Dylan, who changed rock-and-roll right there in Queens. And as Southern civil rights efforts turned deadly, and violent protests also occurred in and around the Fair, Harlem-based Malcolm X predicted a frightening future of inner-city racial conflict. World's Fairs have always been collisions of eras, cultures, nations, technologies, ideas, and art. But the trippy, turbulent, Technicolor, Disney, corporate, and often misguided 1964-65 Fair was truly exceptional.
