Developing Norms for the Provision of Biological Laboratories in Low-Resource Contexts

This thesis examines the role of agricultural service organizations in the rural transformation processes in Uzbekistan, which has experienced a chain of agricultural reforms since 1991. These organizations, apart from providing services (i.e. provision of fertilizers, seeds, machinery), fulfill many other socio-political functions. They also act as a social security net for their personnel. The book's analysis reveals that agrarian transformation has produced three types of service organizations, which differ in their distance from and importance for the government and the state procurement system. This distance has implications for their autonomy, market orientation, and potential for long-term sustainability. Thesis. (Series: ZEF Development Studies - Vol. 23)

DNA Science

The study of life, in all its glory; animals and plants we see around us, the tiny organisms we can't see that affect us every day, and even the molecules which make up life. Learning biology, we ask questions about nature. Lab experiments are HOW we ask the questions. This guide shows how we ask questions in biology- what are the tools, terms, and major approaches scientists use to learn about the living world. It includes some of the major ideas biologists study, as well as descriptions of techniques and instruments used. This guide is intended for a high school or early college student, or anyone interested in understanding how biologists make the discoveries reported in the news daily. Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom. Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.

On June 27-28, 2018, the U.S. National Academies of Sciences, Engineering, and Medicine (the National Academies) convened an international workshop in Amsterdam, the Netherlands, on developing norms for the provision of laboratories in low-resource contexts. The U.S. Department of State's Biosecurity Engagement Program requested that the National Academies organize this workshop to engage an international group of organizations that provide funding for construction, upgrades, and maintenance of biological laboratories in countries without the means to build such labs themselves. Twenty-one people from 19 organizations participated. The intent was to advance the conversation about the identification and application of guiding principles and common norms for use by these organizations in their grants, partnerships, and aid. This publication summarizes the presentations and discussions from the workshop.
