### **American Book Publishing Record**

The lead author of eight successful previous editions has brought together a team that combined, has well over 60 years experience in offering beginning biology labs to several thousand students each year at Iowa State University. Their experience and diverse backgrounds ensure that this extensively revised edition will meet the needs of a new generation of students. Designed to be used with all majors-level general biology textbooks, the included labs are investigative, using both discovery- and hypothesis-based science methods. Students experimentally investigate topics, observe structure, use critical thinking skills to predict and test ideas, and engage in hands-on learning. Students are often asked, "what evidence do you have that" in order to encourage them to think for themselves. By emphasizing investigative, quantitative, and comparative approaches to the topics, the authors continually emphasize how the biological sciences are integrative, yet unique. An instructor's manual, available through McGraw-Hill Lab Central, provides detailed advice based on the authors' experience on how to prepare materials for each lab, teachings tips and lesson plans, and questions that can be used in quizzes and practical exams. This manual is an excellent choice for colleges and universities that want their students to experience the breadth of modern biology.

## **AP Biology**

A New Agenda for Higher Education Historically, higher education has aimed to enhance the possibilities of life for its students. The liberal arts and sciences have sought to do this through cultivating in students a "life of the mind"—the intellectual dimensions of students' lives such as problem-solving capacities and

critical thinking. On the other hand, the professional schools have focused on providing the means whereby students might "make something of themselves" by acquiring competence in specific skills valuable to others. In *A New Agenda for Higher Education*, the authors endorse higher education's utility for enhancing the practical as well as intellectual dimensions of life by developing a third, different conception of educational purpose. Based on The Carnegie Foundation for the Advancement of Teaching seminar that brought together educators from six professional fields with faculty from the liberal arts and sciences, *A New Agenda for Higher Education* proposes an educational aim of "practical reason," focusing on the interdependence of liberal education and professional training. The book includes case studies of instructors from a wide array of disciplines including those who educate their students for practical responsibility. The authors document the process by which they learned to collaborate with one another across fields and, in the end, produced a new discourse of practical reason. The book also offers faculty, administrators, and those interested in the promise of higher education valuable suggestions on how to put these insights to work in their own academic contexts. It promises to stir and support the development of practical wisdom among students of all fields who are preparing for a wide variety of careers and callings.
