This is a fictionalized account of the life and career of world chess champion Alexander Alekhine. Born into Russian nobility, Alekhine lost his family and nearly his life to the Bolsheviks before becoming the world's most powerful chess player. The coming of World War II placed the grandmaster in a difficult position, forcing him to collaborate with the Nazis and to produce anti-Semitic materials. Desperate to win back his credibility after the war, Alekhine was preparing for a redemptive title match at the time of his sudden death. Alekhine's life was marked by alcoholism, fits of depression, scandalous affairs, marriages of convenience, painful compromises, and his battle to become "the Greatest." The novel is told as fiction but is based on the actual people and events that were part of his triumphant career and troubled life.

What is this mysterious activity we call entrepreneurship? Does success require special traits and skills or just luck? Can large companies follow their example? What role does venture capital play? In a field dominated by anecdote and folklore, this landmark study integrates more than ten years of intensive research and modern theories of business and economics. The result is a comprehensive framework for understanding entrepreneurship that provides new and penetrating insights. Examining hundreds of successful ventures, the author finds that the typical business has humble, improvised origins. Well-planned start-ups, backed by substantial venture capital, are exceptional. Entrepreneurs like Bill Gates and Sam Walton initially pursue small, uncertain opportunities, without much capital, market research, or breakthrough technologies. Coping with ambiguity and surprises, face-to-face selling, and making do with second-tier employees is more important than foresight, deal-making, or recruiting top-notch teams. Transforming improvised

start-ups into noteworthy enterprises requires a radical shift, from "opportunistic adaptation" in niche markets to the pursuit of ambitious strategies. This requires traits such as ambition and risk-taking that are initially unimportant. Mature corporations have to pursue entrepreneurial activity in a much more disciplined way. Companies like Intel and Merck focus their resources on large-scale initiatives that scrappy entrepreneurs cannot undertake. Their success requires carefully chosen bets, meticulous planning, and the smooth coordination of many employees rather than the talents of a driven few. This clearly and concisely written book is essential for anyone who wants to start a business, for the entrepreneur or executive who wants to grow a company, and for the scholar who wants to understand this crucial economic activity.
