True's matchmaking skills are the stuff of legend! The second novel in Kieran Scott's delightful teen romance series that TeenVogue.com called "the next Twilight." True is not exactly loving New Jersey. Banished from Mount Olympus and tasked with helping couples find love without using her powers, the goddess-formerly-known-as-Cupid is having a

tough time. Especially now that True's immortal love, Orion, has also appeared at her New Jersey high school—but with no memory of their relationship. To distract herself from seeing Orion flirt with another girl, True focuses her efforts on making a match: Peter and Claudia. Peter is the star quarterback and the most popular guy in school. But he's insecure about his future, so he preemptively dumps Claudia, his girlfriend. (If she won't want to be with him later, why stay together now?) Claudia doesn't take the breakup too well, and she's ready to show the quarterback of their rival school just how ready she is to get over it. But True sees something in these two seniors. She believes they should be together—but can she help them find their way back to each other (and get herself closer to home)? Or have things already spun too far out of control?

Switch-Mode Power Supplies, Second Edition

Developed as a resource for practicing engineers, while simultaneously serving as a text in a formal classroom setting, Wind and Earthquake Resistant Buildings provides a fundamental understanding of the behavior of steel, concrete, and composite building structures. The text format follows, in a logical manner, the typical process of designing a building, from the first step of determining design loads, to the final step of evaluating its behavior for unusual effects. Includes a worksheet that takes the drudgery out of estimating wind response. The book presents an in-depth review of wind effects and outlines seismic design, highlighting the dynamic behavior of buildings. It covers the design and detailing the

requirements of steel, concrete, and composite buildings assigned to seismic design categories A through E. The author explains critical code specific items and structural concepts by doing the nearly impossible feat of addressing the history, reason for existence, and intent of major design provisions of the building codes. While the scope of the book is intentionally broad, it provides enough in-depth coverage to make it useful for structural engineers in all stages of their careers.

Genes quickly established itself as one of the foremost teaching resources in modern biology following its first publication in 1983. It has retained that position through two further editions (1985 and 1987). It was the first textbook to provide a unified view of the molecular biology of prokaryotes (bacteria) and eukaryotes (higher organisms - animals and plants) but this integrated view has always been supported by descriptions of the approaches that the researchers are currently using, making it the most consistently up-to-date account of the rapid advances which have been made in this field during the 1980s. The purpose of this book is to give an account of what is known about the structure and function of genes in both eukaryotes and prokaryotes. The author provides a authoritative, consistent discussion of the complex biochemical and genetic answers to some

crucial questions. What is a gene? How is it reproduced? How are its characteristics conceived or modified within individuals or over evolutionary time? How is it expressed? What controls expression? In effect it covers the ground that now constitutes the core of any modern course in genetics or biochemistry above the most elementary level.

A rich son-of-a-gun hell-bent on getting the grizzly who robbed him of a leg, Larr is a fouler piece of work than the usual brand of lowlifes Nash comes up against. When Larr blackmails Nash into leading his hunt, Nash discovers the killers of man in Larr's twisted domain—a netherworld filled with violence and drugs, obsession and revenge. Nash finds himself face-to-face with Laura, Larr's gorgeous, murderously manipulative wife, and one savage grizzly, a man-killer straight from the jaws of hell . Mary Moon Is Missing

Companies live or die on the basis of estimating their costs. Preparing estimates and bidding for new jobs is a complex and often costly process. There is no substitute for on the job training -- until now. Drawing on the authors' combined experience of more than 70 years, *Estimating Building Costs* presents state-of-the-art principles, practices, and techniques for assessing these expenditures that can be applied regardless of changes in the costs of materials, equipment, and labor. The book is an efficient and practical tool for developing contracts or controlling project costs. The authors cover the major components of the direct cost: estimating procedures and cost trends related to materials, construction equipment, and skilled and unskilled labor. They describe various types of building estimates encountered during the lifecycle of a project, as well as the role and accuracy of each. The book provides an overview of the industry, cost indexes in use, approaches to preparing a detailed estimate, and an in-depth description of the organization and function of the estimating group. Including CSI Master Format and UniFormat codes, estimating forms, a list of available estimating software packages, a detailed construction site and investigation report, the book provides a cost estimating methodology that readers can tailor to their own organizational needs.

Geotechnical Engineering

This volume forms a collection of papers tracking the emergence of the history of archaeology from a subject of marginal status in the 1980s to the

mainstream subject which it is today. Professor Timothy Murray's essays have been widely cited and track over 20 years in the development of the subject. The papers are accompanied by a new introduction which surveys the development of the subject over the last 25 years as well as a reflection of what this means for the philosophy of archaeology and theoretical archaeology. This volume spans Tim's successful career as an academic at the forefront of the study of the history of archaeology, both in Australia and internationally. During his career he has held posts in Britain and Europe as well as Australia. He has edited The Bulletin of the History of Archaeology since 2003.
