### **A Terrorist State as a Frontline Ally**

From acclaimed animal photographer Elke Vogelsang comes a charming, personal collection of portraits of

her three dogs—Noodles, Scout, and Loli. Nice Nosing Youpresents Elke's expressive portraits of her much-loved dogs; a collection compiled over two years in what became a personal and touching project for Elke and her husband, Carsen. One year on Christmas Day, Elke's three dogs suddenly started barking outside the bathroom door. Investigating the commotion, Elke discovered Carsen collapsed in the bathroom. He had suffered a major brain hemorrhage, and the dogs had in fact saved his life, discovering him at a crucial time. The months immediately following were filled with much uncertainty, and in an attempt to establish some sort of routine and find something to lift her husband's mood, Elke started taking photos of their dogs to show Carsen in the hospital. Over the next two years, as Carsen slowly recovered, Elke's project became an obsession. Gathered here in a stunning collection, Elke's photographs are captioned with inspiring quotes, illustrating the personal encouragement she and her husband found in these intimate and playful images. Praised by Good Morning America—"people are going nuts over these photos"—and The Huffington Post—"Elke Vogelsang has taken dog portraits to a new level"—this is truly a collection to treasure.

## **The Astrophotographer's Journal**

It was hitting rock bottom that convinced Lauren to quit her job, sell everything she owned, and travel the world alone. It wasn't an easy decision: she suffered from debilitating anxiety, was battling an eating disorder, and had just had her heart broken. Not only that, but she had so little life experience that she had never eaten rice or been on a bus. She'd hoped leaving everything behind would help her find and heal herself, but instead Lauren's travels were full of bad luck and near-death experiences. She was scammed and assaulted; lost teeth and swallowed a cockroach. She fell into leech-infested rice paddies, was caught up in a tsunami, had the brakes of her motorbike fail, and experienced a very unhappy ending in Thailand. It was just as she was about to give up on travel when she stumbled across a handsome New Zealander with a love of challenges. How Not to Travel The World is about following your dreams, no matter how many curveballs life throws at you. It's about learning to get out of your comfort zone, finding the humour in messed up situations, and falling in love with life on the road.

### **Photographer's Guide to the Nikon Coolpix P900**

The Sony A7 and A7R were the world's first mirrorless, interchangeable lens cameras with a full-frame sensor. Since their release, Sony has expanded the series, adding the A7S and A7II models. All of the cameras in the series are intended for amateurs to semi-professionals who want to jump into photography with a camera that combines compact

size with the performance of a high end DSLR. While the camera manual explains what the camera can do, it doesn't show exactly how to use the camera to create great images! That's where Sony A7 Series: From Snapshots to Great Shots comes in. Starting with the top ten things users need to know about the camera, author Brian Smith carefully guides readers through the operating features. Readers get practical advice from a pro on which settings to use when, great shooting tips, and end of chapter assignments. In this book, updated from the Sony A7 / A7R: From Snapshots to Great Shots (2014), Brian will:

- Include an entire new chapter on Menu Settings and Camera Setup for the various cameras in the A7 series.
- Update and expand the video chapter to include new features in the Sony A7S and A7II, like XAVC S recording and Picture Profiles.
- Update the content covering new features like 5-Axis SteadyShot—only found in A7II—so that the text can apply to possible future cameras with this feature
- Extensively update the Lens Adapter and Accessories chapters to cover new features and gear.
- Replace some of the photos to include shots from the A7S and A7II in the mix.

The A7 Series camera features include:

- Exmor CMOS full frame sensor (with different megapixels depending on camera version)
- TruBlack XtraFine LCD screen (3"/7,5 cm) with 921.6K dots resolution with tilt functionality
- 1.3 cm (0.5inch) Electronic Viewfinder
- 1200-zone evaluative light metering
- Built-in Wi-Fi and NFC
- LED-auto focus illuminator
- Multi Interface Shoe
- 9 customizable buttons and 45 assignable functions

Key differentiating features among the cameras:

- A7: 24MP and fast hybrid-autofocus.
- A7R: 36MP version, with new, higher-density sensor

design, but without optical low-pass filter of A7. Also does not include the faster hybrid auto-focus system in base model. • A7S: High-sensitivity version with an effective ISO range from 100 to 409600 and with 4K video capability, but only 12MP. • A7II: Uses the same sensor (with minor tweaks) as the original A7, but updates the external ergonomics and adds image stabilization as the world's first 5-axis sensor-shift image stabilization system for a full-frame ILC. The A7II has the same 50Mbit XAVC-S codec as the A7S but lacks 4K video.

### **Understanding Exposure**

Attentional biases (ABs) play a prominent role in the development and maintenance of clinically relevant symptoms of, for example, anxiety and depression. In particular, increased attentional orienting and preoccupation with biologically relevant and mood-congruent stimuli has been observed, suggesting that the visual-attentional system is overly sensitive towards threat cues and avoidant of cues of reward in these disorders. First, several experimental paradigms have been used to assess ABs, e.g., the dot probe task, the emotional stroop task, and the spatial cueing task amongst others. Yet, these paradigms are based on different theoretical backgrounds and target different stages of the attentional process. Thus, different paradigms provided converging as well as diverging evidence

with regard to ABs. However, it is often not entirely clear to what extent this reflects real differences and commonalities, or is caused by differences in methodology. For example, behavioral reaction time data can only provide a snapshot of selective attention. Measuring event-related potentials, eye movements, or functional brain imaging data enables exploring the exact temporal and spatial dynamics of attentional processes. Moreover, neuroimaging data reveal specific cortical networks involved in directing attention toward a stimulus or disengaging from it. Second, ABs have been mainly discussed as symptoms of psychopathology, while results in healthy participants are still scarce; previous studies mostly compared extreme groups. However, a comprehensive theoretical and empirical account of ABs in psychopathology also requires a thorough account of ABs in the general healthy population. Moreover, the effect of gender, as an important contributing factor in processing of emotional stimuli, has also not been considered systematically in previous research. Third, a variety of stimuli has been used in the assessment of ABs. So far, mostly facial or word stimuli have been applied. However, in everyday life not only facial emotion recognition but also a fast evaluation of complex social situations is important to be effective in social interactions. Recent research started using more complex stimuli to raise ecological validity. However, the use of ecologically valid stimuli poses some methodological challenges and needs to be applied more systematically. The aim of this research topic is to integrate different paradigms and stimuli, addressing individuals from the whole range of the population continuum, and to apply different

methodological approaches. It is intended to bring together expertise in stimulus selection, timing and implementing issues, advancing and broadening the overall understanding of ABs.
