From basic concepts to research grade material, *Mobile Web 2.0: Developing and Delivering Services to Mobile Devices* provides complete and up-to-date coverage of the range of technical topics related to Mobile Web 2.0. It brings together the work of 51 pioneering experts from around the world who identify the major challenges in Mobile Web 2.0 applications and provide authoritative insight into many of their own innovations and advances in the field. To help you address contemporary challenges, the text details a conceptual framework that provides modeling facilities for context-aware, multi-channel Web applications. It compares various platforms for developing mobile services—from the developer and user perspectives—and explains how to use high-level modeling constructs to drive the application development process through automatic code generation. Proposes an expanded model of mobile application context Explores mobile social software as an Information and Communications Technology (ICT) Discusses the effect of context on mobile usability Through empirical study, the book tests a number of hypotheses on the use of software implementation technology and location context in mobile applications. It introduces Reusable End-User Customization (REUC)—a technique that allows users to adapt the layout of Web pages and automatically reapplies those preferences on subsequent visits. It also investigates the need for non-visual feedback with long system response times, particularly when downloading Web pages to mobile devices.

Why Remember the Fathers

(Please note that a 2015 updated edition is also available). Hailed in 2010 as the most complete source available, Five Last Acts II details options and methods for rational suicide in the event of unbearable and unrelievable suffering. Bringing reassurance, knowledge and hope, and the strength to face an uncertain future. (Please note a 2015 version is now available.) Even with modern technology, not all ends are good ones. Although palliative care continues to make great strides, the final hours or days of some people are so difficult that they elect to take

matters into their own hands and end things sooner rather than later. Once that decision is taken, lack of knowledge, planning or preparation can result in even greater suffering. Five Last Acts collects the wisdom of multi-disciplinary research, workshops and developments worldwide in a major new volume. The body of the work is written in easy-to-understand language to offer a practical guide for every reader. Technical explanations are reserved for the appendix. Five Last Acts provides the reliable options for the last act in your own play. Feedback on the first edition: "I have just finished reading your most excellent book, Five Last Acts; it is so well-researched, so informative, so clear, that it leads me to ask this question: which rational person would not want to obtain a copy of this book as an insurance policy against an uncertain future?" Chris Goodwin The new edition of Five Last Acts is completely revised and expanded, giving even clearer insights and the most comprehensive guidance on self-deliverance worldwide. Over 400 pages with more than 40 illustrations and over 450 references. It is the only book of its kind that includes the emergency methods and practices that can even be used if one finds oneself confined to a hospital or a nursing home.

The aim of this volume is to give an introduction and overview to differential topology, differential geometry and computational geometry with an emphasis on some interconnections between these three domains of mathematics. The

chapters give the background required to begin research in these fields or at their interfaces. They introduce new research domains and both old and new conjectures in these different subjects show some interaction between other sciences close to mathematics. Topics discussed are; the basis of differential topology and combinatorial topology, the link between differential geometry and topology, Riemannian geometry (Levi-Civita connection, curvature tensor, geodesic, completeness and curvature tensor), characteristic classes (to associate every fibre bundle with isomorphic fiber bundles), the link between differential geometry and the geometry of non smooth objects, computational geometry and concrete applications such as structural geology and graphism.

"We are created in rhythm, kept alive in rhythm, evolve through rhythm. Tides, breath, and blood flow in rhythm. We are born into a universe of currents, and our heart is the great conductor of the body, orchestrating our flow." The mystical foundations of all the world's spiritual paths meet in a single, sacred place: the heart of the seeker. We have reached a time when scientific understanding mirrors

the teachings of the great wisdom traditions in revealing our energetic heart as the light of consciousness, the fire of love, a field of intelligence. Tending the Heart Fire, the first book by pioneering yogini Shiva Rea, is an invitation to embody our extraordinary potential at this turning point in time, to reconnect your life to the rhythms of your body and the natural world—to live in flow with the pulse of life. Weaving together wisdom from the great world traditions—including yoga, Ayurveda, Tantra, and modern science—Shiva presents an essential resource for becoming a firekeeper of the sacred heart. This diverse treasury is filled with mediations, life guidance, seasonal rituals, and daily practices, including: Insights for harmonizing with the sacred junctures of time—the daily, weekly, lunar, and solar cycles of manifestation and renewal Aligning with the seasons—how to adapt your diet, exercise, and yoga rhythms throughout the annual cycle Ways to honor the great sacred holidays, rites, and festivals Awakening of sahaja—the natural flow at the origins and source of yoga asana and sacred embodiment at the heart of yoga and Tantra Skills for tending your inner fire in every aspect of life and healing imbalances that can support a renewable energy lifestyle A visual teaching with over a hundred full-color images, including reference charts, diagrams, illustrations, and ancient poetry for inspiration The legacy of the Heart Fire is more than eight hundred thousand years old—and in our modern world, we need more than ever to consciously reconnect to the radiant field that transcends time, space, and culture. "The direct awakening of the heart often happens when we are at a crisis point, when the armor of our heart has to crack," writes Shiva Rea. "Let us

return to the power and magnificence of our hearts—as living fire, as intelligent energy and electromagnetic radiance, and as our illuminating guide toward love, creativity, and deep knowing of our true sacred nature."

The Information and Communications for Development series looks in depth at how information and communications technologies are affecting economic growth in developing countries. This new report, the fourth in the series, examines the topic of data-driven development, or how better information makes for better policies.

The objective is to assist developing-country firms and governments in unlocking the value of the data they hold for better service delivery and decision making and to empower individuals to take more control of their personal data. We are undoubtedly experiencing a data revolution in which our ability to generate, process, and utilize information has been magnified many times over by the machines that we increasingly rely upon. This report is about how the data revolution is changing the behavior of governments, individuals, and firms and how these changes affect the nature of development: economic, social, and cultural. How can governments extract value from data to improve service delivery in the same way that private companies have learned to do for profit? Is it feasible for individuals to take ownership of their own data and to use it to improve their livelihoods and quality of life? Can developing-country firms compete with the internet majors on their own turf and be even more innovative in their use of data to serve local customers better? Though the report is aimed primarily at government policy makers, it also has great relevance for individuals concerned about how their personal data is used and how the data revolution might affect their future job prospects. For private sector firms, particularly those in developing countries, the report suggests how they might expand their markets and improve their competitive edge. For development professionals, the report provides guidance on how they might use data more creatively to tackle long-standing global challenges, such as eliminating extreme poverty, promoting shared prosperity, or mitigating the effects of climate change. The report's chapters

explore different themes associated with the supply of data, the technology underlying it, and the demand for it. An overview chapter focuses on government use of data and presentation of definitions. Part I of the report then looks at the “supply side” of the data sector, with chapters on data connectivity and capacity (where data comes from, how it is stored, and where it goes) and data technology (specifically big data analytics and artificial intelligence) and how this is contributing to development. Part II looks at the sector’s “demand side,” with a chapter on people’s use of data and another that examines how firms use digital platforms in the data economy and how that contributes to competitiveness. Part III brings together the policy implications for developing-country stakeholders, with a chapter considering government policies for data, including data protection and privacy. A closing Data Notes appendix looks at statistical indicators associated with the use of data and presents the 2018 update of the Digital Adoption Index (DAI), a composite indicator introduced in the 2016 World Development Report: Digital Dividends.

Southern Pacific and its predecessor railroads constructed and maintained depots throughout their territory. Between 1877 and 1894, a series of 26 numbered standard plans for depots was developed, and each plan was successively in use for a few years. By the beginning of the 20th century, there were more than 600 SP depots and telegraph offices. By then, many older depots, as well as most new ones at that time, had been or would be built to these standards. This book describes those depots. "The story of depots in SP's far-flung territory is an interesting one: when they were built, what they looked like, and when they were destroyed or were saved. Particularly for smaller communities, the depot was once an integral part of local life, so the life stories of these depots are an integral part of town history. "In addition to the 26 numbered standard depot designs, SP also built a number of other de facto standard depots, such as the colonnade style, and

several such designs are described here. Also included are a group of stuccoed depots, modernized from older buildings, as well as standard-design depots built by predecessor railroads, such as the El Paso & Southwestern. Southern Pacific built each depot with an eye to what was expected to be needed. The overall size of the depot often reflected current or anticipated town size. The agent had quarters upstairs in a two-story depot, essential in places where suitable local housing was not available, but otherwise a one-story depot would be built. Freight rooms were sized according to the expected volume of business. Well-known depot historian Henry Bender has extensively researched this subject, and presents here an authoritative account of hundreds of SP standard depots, illustrated with a fine collection of photographs. The jacket painting is by noted railroad artist John R. Signor.

Excerpts from the book: ..".It may be well for us to take a general view of the subject of Yoga. What is the end and aim of the teachings and the practices? What does it all mean? What is Man seeking for in all these endeavors? What does life, and growth, and development, and evolution mean? These are questions that thinking people are constantly asking, and which but few are able to answer even partially. The Yogi Philosophy teaches that the end of all human endeavor and life is to allow the soul to unfold until it reach with Spirit. And as Spirit is the divine part of man- the bit of God-material in him - this union eventually will result in what is known as Union with God - that is the bringing of the individual soul into conscious touch and union with the centre of all life."

With a wealth of color illustrations, the book serves as a record of the 30-plus Crochet Reefs worldwide and names all 7,000-plus contributors in a specially designed section."--Amazon.

Somehow Good

Samuel Beckett is unique in literature. Born and educated in Ireland, he lived most of his life in Paris. His literary output was rendered in either English or French, and he often translated one to the other, but there is disagreement about the contents of his bilingual corpus. A Beckett Canon by renowned theater scholar Ruby Cohn offers an invaluable guide to the entire corpus, commenting on Beckett's work in its original language. Beginning in 1929 with Beckett's earliest work, the book examines the variety of genres in which he worked: poems, short stories, novels, plays, radio pieces, teleplays, reviews, and criticism. Cohn grapples with the difficulties in Beckett's work, including the opaque erudition of the early English verse and fiction, and the searching depths and syntactical ellipsis of the late works. Specialist and nonspecialist readers will find A Beckett Canon valuable for its remarkable inclusiveness. Cohn has examined the holdings of all of the major Beckett depositories, and is thus able to highlight neglected manuscripts and

correct occasional errors in their listings. Intended as a resource to accompany the reading of Beckett's writing--in English or French, published or unpublished, in part or as a whole--the book offers context, information, and interpretation of the work of one of the last century's most important writers. Ruby Cohn is Professor Emerita of Comparative Drama, University of California, Davis. She is author or editor of many books, including *Anglo-American Interplay in Recent Drama*; *Retreats from Realism in Recent English Drama*; *From Desire to Godot*; and *Just Play: Beckett's Theater*.

Five Last Acts, the Exit Path 2015

Of interest to psychotherapists and counsellors of all kinds, this text describes key issues and controversies in human sexuality as they present in therapy practice. The author uses the biopsychosocial approach to human behaviour to analyze sexual behaviour, object choice, transgendered experience, sexual problems, transgressive sex and sex therapy. Issues of sexuality in the consulting room, including transference and countertransference, are discussed and, throughout, therapeutic approaches to sexual problems are presented. The human capacity for inventive imagining is presented as an important force for beneficial change and, in relation to sexuality, discussed in terms of the 'erotic imagination'.
