Just like the periodical crystalline potential in solid-state crystals determines their properties for the conduction of electrons, the periodical structuring of photonic crystals leads to envisioning the possibility of achieving a control of the photon flux in dielectric and metallic materials. The use of photonic crystals as a cage for storing, filtering or guiding light at the wavelength scale thus paves the way to the realisation of optical and optoelectronic devices with ultimate properties and dimensions. This should contribute toward meeting the demands for a greater miniaturisation that the processing of an ever increasing number of data requires. Photonic Crystals intends to provide students and researchers from different fields with the theoretical background needed for modelling photonic crystals and their optical properties, while at the same time presenting the large variety of devices, from optics to microwaves, where photonic crystals have found applications. As

such, it aims at building bridges between optics, electromagnetism and solid-state physics. This book was written by six specialists of nanophotonics, and was coordinated by Jean-Michel Lourtioz, head of the Institut d'Optique Electronique Fondamentale in Orsay and coordinator of the French Research Network in Nanophotonics.

The Outsiders is a dramatic and enduring work of fiction that laid the groundwork for the YA genre. S. E. Hinton's classic story of a boy who finds himself on the outskirts of regular society remains as powerful today as it was the day it was first published. "The Outsiders transformed young-adult fiction from a genre mostly about prom queens, football players and high school crushes to one that portrayed a darker, truer world." —The New York Times "Taut with tension, filled with drama." —The Chicago Tribune "[A] classic coming-of-age book." —Philadelphia Daily News A New York Herald Tribune Best Teenage Book A Chicago Tribune Book World Spring Book Festival Honor Book An ALA Best Book for Young Adults Winner of the Massachusetts Children's Book Award

On the occasion of the twenty-fifth anniversary of its first publication, here is the definitive edition of the book acclaimed as "the most affecting and successful narrative ever done about the Holocaust" (Wall Street Journal) and "the first masterpiece in comic book history" (The New Yorker). The Pulitzer Prize-winning Maus tells the story of Vladek Spiegelman, a Jewish survivor of Hitler's Europe, and his son, a cartoonist coming to terms with his father's story. Maus approaches the unspeakable through the diminutive. Its form, the cartoon (the Nazis are cats, the Jews mice), shocks us out of any lingering sense of familiarity and succeeds in "drawing us closer to the bleak heart of the Holocaust" (The New York Times). Maus is a haunting tale within a tale. Vladek's harrowing story of survival is woven

into the author's account of his tortured relationship with his aging father. Against the backdrop of guilt brought by survival, they stage a normal life of small arguments and unhappy visits. This astonishing retelling of our century's grisliest news is a story of survival, not only of Vladek but of the children who survive even the survivors. Maus studies the bloody pawprints of history and tracks its meaning for all of us.

Born into a Jewish ghetto in Hungary, as a child, Elie Wiesel was sent to the Nazi concentration camps at Auschwitz and Buchenwald. This is his account of that atrocity: the ever-increasing horrors he endured, the loss of his family and his struggle to survive in a world that stripped him of humanity, dignity and faith. Describing in simple terms the tragic murder of a people from a survivor's perspective, *Night* is among the most personal, intimate and poignant of all accounts of the Holocaust. A compelling consideration of the darkest side of human nature and the enduring power of hope, it remains one of the most important works of the twentieth century. New translation by Marion Wiesel, with a new introduction by Elie Wiesel.
