Laboratory Procedures for the Medical Office

Master magician Harry Houdini and English ghost researcher Harry Price were true pioneers in both establishing skepticism and scientific methods in the newly created field of paranormal research. They set the foundation for future 20th Century researchers such as J.B. Rhine. Joseph Banks Rhine was a botanist who later developed an interest in parapsychology and psychology. Rhine founded the parapsychology lab at Duke University, the Journal of Parapsychology, and the Foundation for Research on the Nature of Man. He also initiated the Parapsychological Association. Rhine also coined the term ESP. I think the reader will find that 1957's Parapsychology: Frontier Science of the Mind is as relevant today as it

was when it first written.

Basic Mathematics for Electronics combines electronic theory and applications with the mathematical principles necessary to solve a wide range of circuit problems. Coverage of mathematical topics reflects current trends in electronics. A complete chapter is devoted to Karnaugh mapping to help students cope with the greater complexity of modern digital circuit devices. Marginal notes indicate areas of special interest in computers and computer usage. To facilitate learning, material is presented in a block form that employs a two-color, single-column format. After the initial chapters, sections may be studied independently. As each new topic is introduced, illustrative examples and numerous problems, graded from easy to difficult, are given for reinforcement. Answers to odd-numbered problems are provided in the back of the book. The Answers to Even-Numbered Problems booklet contains answers and selected worked-out solutions. This book examines the Iran-Contra affair, the trials of Poindexter and North and the testimony of Ronald Reagan as a test-case of political morality. It draws out the implications of the statements of North and his secretary, Fawn Hall, who were so convinced of the moral rightness of their actions that they were prepared to break the law, lie and destroy vital evidence. It tries to ascertain what was going on in the minds of these people and especially in that of the President who claimed not to be cognizant of the actions of his subordinates.

Science in Your World: Teacher resource masters

Back when I was seventeen, a buddy and I took a car for a test drive. I guess we really wanted to test it because we drove it all the way from the suburbs of Cleveland to Chicago. That was one of the first of many trips in my life. Since then, they have been tamer and less intense but, certainly, still exciting. I've come across quite a few memorable people and places, and this story touches some of those experiences. We all have our little story to tell about our lives, and this is mine. It is here that I share them with you, and I hope you find some enjoyment out of it. I look forward to someday reading about your story.
