Once considered the most famous African-American resort community in the country, Idlewild was referred to as the Black Eden of Michigan in the 1920s and '30s, and as the Summer Apollo of Michigan in the 1950s and '60s. Showcasing classy revues and interactive performances of some of the leading black entertainers of the period, Idlewild was an oasis in the shadows of legal segregation. Idlewild: Black Eden of Michigan focuses on this illustrative history, as well as the decline and the community's contemporary renaissance, in over 200 rare photographs. The lively legacy of Lela G. and Herman O. Wilson, and Paradise Path is included, featuring images of the Paradise Club and Wilson's Grocery. Idlewild continued its role as a distinctive American resort throughout the 1950s, with photographs ranging from Phil Giles' Flamingo Club and Arthur Braggs's Idlewild Revue.

A presentation of real examples of industrial uses for formal methods such as SCADE, the B-Method, ControlBuild, Matelo, etc. in various fields, such as railways, aeronautics, and the automotive industry, the purpose of this book is to present a summary of experience on the use of these "formal methods" (such as proof and model-checking) in industrial examples of complex systems. It is based on the experience of people who are currently involved in the creation and evaluation of safety critical system software. The involvement of people from within the industry allows us to avoid the usual problems of confidentiality which could arise and thus enables us to supply new useful information (photos, architecture plans, real examples, etc.).

Most of the research done in social cognition has been conducted with younger adults and may not be applicable to a much older population. Social Cognition and Aging provides a snapshot view of research that has been done with older adults or is directly applicable to this population. Focusing on issues of self identity, social interactions, and social perceptions, this book provides a broad overview of how aging affects one's own perceptions and actions as well as how others perceive and interact with the aged. Coverage includes such topics as self-control, memory, resilience, age stereotypes, moral development, and the "art" of living. With contributions from top researchers in both gerontology and psychology, this book is an important reference for academics and professionals alike in personality, cognition, social psychology, adult development, sociology, and gerontology.

This book is an introductory course to the physics and chemistry of the atmosphere and to climate dynamics. It covers the basics in thermodynamics, fluid dynamics, radiation, and chemistry and explains the most intriguing problems that currently exist in the study of the atmospheres of the Earth and planets. A particular effort is made to approach the different topics intuitively. Among the themes covered are the most recent evolution concerning the chemistry of polluted troposphere, the global warming problem, and chaos and nonlinear theory. The book is almost completely rewritten in comparison to the previous edition, with a more logical organization of the chapters. The fundamentals of thermodynamics, radiation, fluid dynamics and chemistry are introduced in the first six chapters, including a new chapter on remote sensing. Also there is an additional chapter on geoengineering. A significant addition to the new edition, at the end of each chapter, are examples where the topics introduced in the chapter are further discussed with application to classical problems or new research items. Many of these examples are accompanied by computer programs. The most important updates deal with the

theory of the general circulation, the methods to evaluate GCM, the detailed discussion of the urban troposphere and the chaos and nonlinear phenomena.

Teeth are among the best sources of evidence for both identification purposes and studies of demography, biological relationships, and health in ancient human communities. The anthropologist's specimen may be a cast that a dentist has taken from a living mouth, or actual teeth from an archaeological site or forensic case. Acronym agglomeration is an affliction of the age, and there are acronym addicts who, in their weakness, find it impossible to resist them. More than once in recent months my peers have cautioned me about my apparent readiness to use not only acronyms, but abbreviations, foreign isms, codes, and other cryptic symbols rather than common, ordinary American words. Many among us, though, either have not received or have chosen to ignore such advice. As a consequence, what we write and speak is full of mystery and confusion. It is then for the reader and listener and for the writer and speaker that Reta C. Moser has compiled this guide. Its effective application to the art of communication is urged. Such use should help avoid many

of the misunderstandings involving terminology which occur daily. Although such misunderstandings are certainly crucial in humanistic and social situations, they are often of immediate import and the trigger to disaster in scientific, technical, and political situations. Some 15,000 acronyms and 25,000 definitions are provided (a 50- and 47 -percent increase over the 1964 edition!), with due credit to Miss Moser's diligence in making the compilation and with the acknowledgment that the acronymical phenomenon is very much with us. This edition, like the first, is certain to be of value to writers, librarians, editors, and others who must identify and deal with acronyms.
