Rotten School #1: The Big Blueberry Barf-Off!

Robert Herjavec has lived the classic “rags to riches” story, from having \$20 in his pocket to starting up technology companies worth hundreds of millions of dollars. Now the star of television’s Dragons’ Den and Shark Tank, this son of Croatian immigrants earned his incredible wealth by overcoming the odds with hard work and determination. On television, Herjavec bankrolls the best inventions and shoots down the best of intentions. Now, he’s sharing his hard-won wisdom in one of the most inspirational business books of recent times. In Driven, Herjavec shares the secrets that took him from his job waiting tables to growing his nascent technology company into a world-class conglomerate, The Herjavec Group. Herjavec’s principles are as valuable in the living room as they are in the boardroom. Anyone can succeed, on their own terms, by following his sage but simple advice—if they’re willing to take chances, to take control of their own future and to stay true to their own visions.

American Library Book Catalogues 1801-1875

Offers a look at how to create safe "psychic places" and benevolent feelings in the face of difficult and challenging situations, such as meeting new people, traffic jams and long lines, and emotionally charged family get-togethers. Original.

Little Girl Lost

In his bestselling business book *Driven*, Robert Herjavec, the co-star of CTV's *Shark Tank* and former co-star of CBC's *Dragons' Den*, urged his readers to embrace risk, take control of their lives and stay true to their visions. Now, Herjavec pushes his readers even further toward greatness. Known for his honesty, integrity and powers of persuasion, Herjavec never fails to reach for the highest rung on the ladder. In *The Will to Win*, he shares some of his own secrets for greatness, whether it's knowing when to be aggressive (and when not to be), when to talk and when to listen, or when and how to ask the right questions. And he reminds us that we all have the same 24 hours a day in which to maximize our future—it's how we spend those hours that counts. Whether you are seeking to build the next big communications technology company, become the most respected teacher in your education system or make a lasting impact as an artist in your field, the most important decision you can make, according to Herjavec, is to reject mediocrity. Drawing on anecdotes from his own life and from the lives of celebrity friends such as Oprah, Georges St-Pierre and Celine Dion, he delivers valuable lessons that will guide readers to greater happiness and success.

There are investment aspects of the North American Free Trade Agreement (NAFTA) which considerably enhance the opportunities for foreign investment among the signatories, while at the same time improving the security of such investment. NAFTA reflects the Parties' recognition that liberalization of host country investment restrictions is as important as the elimination of trade barriers. With the assistance of such high caliber contributors as Roberto Mayorga, Kent S. Foster, Preston Brown, and Dr. Jorge Witker, the book analyses both the advantages and disadvantages of this policy upon the investment climate within the countries of the various signatories. This book is the second volume in Kluwer's NAFTA Law and Policy Series, publishing high-quality studies on different aspects of NAFTA, including legal analysis and commentary on the Agreement. Among the numerous areas that are to be covered in the series are topics as diverse as agriculture, dispute settlement, environment, intellectual property rights, investment, and labour.

This case study of a politically reformed, middle-sized Midwestern city provides a model of fiscal stress that contrasts sharply with that of America's vast metropolitan centers. Dr. Rubin examines the interaction of social, political, and economic causes of the city's predicament. She then goes on to analyze the specific factors that solved the city's problems over a six-year period. Finally, she offers a self-correcting mechanism that would allow a city to save itself from financial trouble without direct state or federal assistance. This study suggests that local political factors were even more important than national factors in contributing to the city's fiscal stress. It also brings into question the theory that generosity to the poor creates urban fiscal stress and that giving less to the poor will solve urban financial problems.

Blood Is Thicker Than Water

Physics is naturally expressed in mathematical language. Students new to the subject must simultaneously learn an idiomatic mathematical language and the content that is expressed in that language. It is as if they were asked to read *Les Misérables* while struggling with French grammar. This book offers an innovative way to learn the differential geometry needed as a foundation for a deep understanding of general relativity or quantum field theory as taught at the college level. The approach taken by the authors (and used in their classes at MIT for many years) differs from the conventional one in several ways, including an emphasis on the development of the covariant derivative and an avoidance of the use of traditional index notation for tensors in favor of a semantically richer language of vector fields and differential forms. But the biggest single difference is the authors' integration of computer programming into their explanations. By programming a computer to interpret a formula, the student soon learns whether or not a formula is correct. Students are led to improve their program, and as a result improve their understanding.

Broken Skies

"In the last ten years, the United States—the most powerful and technically advanced society in human history—has been confronted by a series of ominous, seemingly intractable crises. First there was the threat to the environmental survival; then there was the apparent shortage of energy; and now there is the unexpected decline of the economy. These are usually regarded as separate

afflictions, each to be solved in its own terms: environmental degradation by pollution controls; the energy crisis by finding new sources of energy and new ways of conserving it; the economic crisis by manipulating prices, taxes, and interest rates. But each effort to solve one crisis seems to clash with the solution of the others—pollution control reduces energy supplies; energy conservation jobs. Inevitably, proponents of one solution become opponents of the others. Policy stagnates and remedial action is paralyzed, adding to the confusion and gloom that beset the country." So opens Barry Commoner's *The Poverty of Power*, the book in which America's great biologist and environmentalist addresses himself to the central question of our day. He concludes that "what confronts us is not a series of separate crises, but a single basic deficit—a fault that lies deep in the design of modern society. This book is an effort to unearth that fault, to trace its relation to the separate crises, and to consider what can be done to correct it at its root."

Our Working-girls and how to Help Them

Just as with his remarkable military novels, millions of readers have been captured by the rich characters and vivid realism of W. E. B. Griffin's police dramas. "Griffin has the knack," writes *The Philadelphia Inquirer*. He "sets his novel before you in short, fierce, stop-for-nothing scenes. Before you know it, you've gobbled it up." Now, in *Final Justice*, Detective Matt Payne of the Philadelphia police department—newly promoted to sergeant and assigned to Homicide—finds himself in the middle of three major assignments. The first case, a fatal shooting at a fast-food restaurant, seems simple, but rapidly becomes complicated. The second, a rape that tumbled into murder, begins complicated and only gets more so, as it becomes apparent that the crime may be part of a disturbing, and escalating, pattern. The third is the most bizarre, as Payne becomes involved with a local figure who long ago fled the country, leaving behind the mummified body of his girlfriend in a trunk. Ever since, the murderer has been sending taunting postcards from his safe haven—but all that may be about to change. Weaving in and around this already hectic schedule are the visit to Philadelphia of the self-absorbed star of a series of improbable police movies, who wants Payne to show him "the real stuff," and the appearance in Payne's life of two very different women. Either one of them alone would be enough to set his head spinning, but together . . . this might be the most complicating thing of all. Filled with color and detail and plots as real as the headlines, this is a riveting novel of the men and women who put their lives on the line, from the cop on the beat to the commissioner himself. It's a story of fears, dangers, courage, loyalty, and genuine heroism: storytelling at its best.

What was the world like for people thousands of years ago? How can we know? Through fiction? This is a work of literary criticism, and more. It begins with a discussion of the problem of authenticity and then considers twelve pieces of

fiction that depict human prehistory: H.G. Wells' *The Island of Doctor Moreau*, Pierre Boulle's *The Planet of the Apes*, Jules Verne's *The Village in the Treetops*, Edgar Rice Burroughs' *The Land That Time Forgot*, the struggle for legitimacy in Wells' "The Grisly Folk," the Tasmanian analogue in Lester Del Rey's "The Day Is Done," William Golding's *The Inheritors*, "the promise of humanity" in Arthur C. Clarke's *2001: A Space Odyssey*, the theme of "a god among the heathen" in Wells' "The Lord of the Dynamos" and other works, Jean Auel's *The Clan of the Cave Bear*, J.H. Rosny-Aîné's *Quest for Fire*, and Wells' *The Time Machine: An Invention*. A final chapter considers the paleoanthropologist as literary critic.

The Castlemaine Murders

A radical reinterpretation of early American history from a native point of view In *Masters of Empire*, the historian Michael McDonnell reveals the pivotal role played by the native peoples of the Great Lakes in the history of North America. Though less well known than the Iroquois or Sioux, the Anishinaabeg who lived along Lakes Michigan and Huron were equally influential. McDonnell charts their story, and argues that the Anishinaabeg have been relegated to the edges of history for too long. Through remarkable research into 19th-century Anishinaabeg-authored chronicles, McDonnell highlights the long-standing rivalries and relationships among the great tribes of North America, and how Europeans often played only a minor role in their stories. McDonnell reminds us that it was native people who possessed intricate and far-reaching networks of trade and kinship, of which the French and British knew little. And as empire encroached upon their domain, the Anishinaabeg were often the ones doing the exploiting. By dictating terms at trading posts and frontier forts, they played a crucial role in the making of early America. Through vivid depictions of early conflicts, the French and Indian War, and Pontiac's Rebellion, all from a native perspective, *Masters of Empire* overturns our assumptions about colonial America and the origins of the Revolutionary War. By calling attention to the Great Lakes as a crucible of culture and conflict, McDonnell reimagines the landscape of American history.

These topics are addressed in an interdisciplinary manner, focusing on legal, economic, social, political and scientific issues, with contributions from American, Canadian, Mexican and Chilean authors. The book is invaluable as it provides a broad outlook on multifaceted environmental issues in a single volume. This book is the third volume in our NAFTA Law and Policy series, which offers high-quality studies on different aspects of NAFTA, including legal analysis and commentary on the Agreement. The numerous areas covered by the series include NAFTA topics as diverse as agriculture, dispute settlement, intellectual property rights, investment and labour.
