Peterson's Graduate Programs in Computer Science & Information Technology, Electrical & Computer Engineering, and Energy & Power Engineering contains a wealth of information on colleges and universities that offer graduate work these exciting fields. The profiled institutions include those in the United States, Canada and abroad that are accredited by U.S. accrediting bodies. Up-to-date data, collected through Peterson's Annual Survey of Graduate and Professional Institutions, provides valuable information on degree offerings, professional accreditation, jointly offered degrees, part-time and evening/weekend programs, postbaccalaureate distance degrees, faculty, students, degree requirements, entrance requirements, expenses, financial support, faculty research, and unit head and application contact information. Readers will find helpful links to in-depth descriptions that offer additional detailed information about a specific program or department, faculty members and their research, and much more. In addition, there are valuable articles on financial assistance, the graduate admissions process, advice for international and minority students, and facts about accreditation, with a current list of accrediting agencies.

Spend your study time wisely As you advance from student to apprentice to journeyman status, you log a lot of study hours. Make the most of those hours with this fully updated, sharply focused self-study course. It contains everything you need to know about electrical theory and applications, clearly defined and logically organized, with illustrations for clarity and review questions at the end of each chapter to help you test your knowledge. \* Understand electron theory and how electricity affects matter \* Recognize applications for both alternating and direct current \* Comprehend Ohm's Law and the laws governing magnetic circuits \* Learn from detailed drawings and diagrams \* Explore trigonometry and alternative methods of calculation \* Identify instruments and measurements used in electrical applications \* Apply proper grounding and ground testing, insulation testing, and power factor correction

"This popular guide provides an understanding of basic design criteria and calculations, along with current inspection and testing requirements and explains how to meet the requirements of the IEE IET Wiring Regulations. The book explains in clear language those parts of the regulations that most need simplifying. There are common misconceptions regarding bonding, voltages, disconnection times and sizes of earthing conductors. This book clarifies the requirements and outlines the correct procedures to follow. This title provides an affordable reference for all electrical contractors, technicians and other workers involved in designing and testing electrical installations. With the coverage carefully matched to the syllabus of the City and Guilds Certificate in Design, Erection and Verification of Electrical Installations (2396) and containing sample exam questions and answers, it also makes an ideal revision guide. Brian Scaddan, I Eng, MIET, is a consultant for and an Honorary Member of City & Guilds. He has over 35 years' experience in Further Education and training. He is Director of Brian Scaddan Associates Ltd, an approved City & Guilds and NICEIC training centre offering courses on all aspects of Electrical installation Contracting, Including the City & Guilds 2396 series. He is also a leading author of books on Electrical Installation"--
