Transactions of the ASAE.

This work presents the results of RILEM TC 237-SIB (Testing and characterization of sustainable innovative bituminous materials and systems). The papers have been selected for publication after a rigorous peer review process and will be an invaluable source to outline and clarify the main directions of present and future research and standardization for bituminous materials and pavements. The following topics are covered: - Characterization of binder-aggregate interaction - Innovative testing of bituminous binders, additives and modifiers - Durability and aging of asphalt pavements - Mixture design and compaction analysis - Environmentally sustainable materials and technologies - Advances in laboratory characterization of bituminous materials - Modeling of road materials and pavement performance prediction - Field measurement and in-situ characterization - Innovative materials for reinforcement and interlayer systems - Cracking and damage characterization of asphalt pavements - Recycling and re-use in road pavements This is the proceedings of the RILEM SIB2015 Symposium (Ancona, Italy, October 7-9, 2015).

This collection presents papers from a symposium on extraction of rare metals as well as rare extraction processing techniques used in metal production. Rare metals include strategic metals that are in increasing demand and subject to supply risks. Metals represented include neodymium, dysprosium, scandium and

others; platinum group metals including platinum, palladium, iridium, and others; battery related metals including lithium, cobalt, nickel, and aluminum; electronics-related materials including copper and gold; and refractory metals including titanium, niobium, zirconium, and hafnium. Other critical materials such as gallium, germanium, indium and silicon are also included. Papers cover various processing techniques, including but not limited to hydrometallurgy (solvent extraction, ion exchange, precipitation, and crystallization), electrometallurgy (electrorefining and electrowinning), pyrometallurgy, and aerometallurgy (supercritical fluid extraction). Contributions are focused on primary production as well as secondary production through urban mining and recycling to enable a circular economy. A useful resource for all involved in commodity metal production, irrespective of the major metal Provides knowledge of cross-application among industries Extraction and processing of rare metals that are the main building block of many emerging critical technologies have been receiving significant attention in recent years. The technologies that rely on critical metals are prominent worldwide, and finding a way to extract and supply them effectively is highly desirable and beneficial.

Processing Contaminants in Edible Oils

Better Roads

Rare Metal Technology 2020

Covers all aspects of controlled drug delivery, including human, agricultural and animal applications. The 70 entries, written by an international team of renowned experts, offers A-to-Z coverage of controlled drug delivery systems for researchers in the pharmaceutical and biotechnology industries, agriculture companies, medical device companies, clinical research organizations and medical schools.

Bulletin

Provides information on the chemical properties of dietary fiber and reliable analytical methodology with an emphasis on AOAC Official Methods. Topics include the chemistry of saccharides, dietary fiber analytical methodology, the physico-chemical properties of dietary fiber, and fiber contents of foods. The book includes many tables of data such as the dietary fiber content of brand name and generic food products of China, Japan, Bangladesh, the US, and Mexico. Intended for analytical chemists, nutritionists, food scientists, and health professionals. Annotation copyrighted by Book News, Inc., Portland, OR

This masterful third edition of Freshney's Culture of Animal Cells updates and considerably expands the scope of its predecessor and still enables both the novice and the experienced researcher to apply the basic and more sophisticated techniques of tissue culture. New Topics covered include: the use of molecular techniques in cell culture, such as DNA fingerprinting, fluorescence in situ hybridization, and chromosome painting cell interactions in cell culture new methods for separating cells new or refined methods for assessing cytotoxicity, viability, and mutagenicity experimental details for culture of specialized cells types not covered in previous editions new or refined techniques for visualizing cells, including time-lapse photography and confocal microscopy The revised and expanded third edition offers the following features: over 350 new references to the primary literature an international list of cell banks an international listing of

reagents and commercial supplies a subject index a glossary Also available:
0471169021 Culture of Animal Cells: A Multimedia Guide CD-ROM \$150 est. From
the reviews: "I strongly recommend this volume for any laboratory wishing to
culture mammalian cells" - Biotechnology "It is not very often that it is possible to
say of a book, 'I don't know how I managed without it previously.' Here is such a
book" - Cell Biology International Reports

Dietary Fiber Analysis and Applications

ASHRAE Journal

Instruments

Ceramic matrix composites are likely candidates for high-temperature structural applications in industries such as aerospace, utilities, and transportation. This volume includes papers on advances in basic science and technology of ceramic matrix composites and how these advances can be used to address technological issues faced by industry.

Instruments & Control Systems

Official Methods of Analysis of AOAC International

In summary, it was found that phosphates are antioxidants, particularly after cooking. Two different mechanisms are suggested for their antioxidant activity: chelation in the cooked muscle, and pH and pH buffering in the raw muscle.
