Imagine No Possessions

In this fourth volume of the "Secrets of the Forest" series, outdoor educator Mark Warren describes the details of how to make and operate the tools that hurl projectiles toward a target including: · "firing" techniques of a sling, spear, atl-atl, bow and arrow, throwing knife, tomahawk, and blowgun. · a comprehensive lesson in the art of archery that includes the direct, lob, and clout shots, as well as shooting at a moving target. · primitive precision methods of creating your own Cherokee self-bow and rivercane arrows. · cementing projectile skills through a gamut of games and challenges. The second half of the book provides lessons on tandem canoeing, beginning on a lake or pond and evolving to whitewater. The pre-education of paddling starts on a creek with a self-made model boat to understand the dynamics of moving water. On the lake, using a full-sized canoe, paddlers learn how to take control of their craft. Once on current, paddlers are introduced to the never-relenting march of moving water, a phenomenon that must figure into every river maneuver, from planning routes by "reading" the water, eddy turns, lateral ferry maneuvers, peel-outs, hovering in place, and running rapids "dry," to river-rescue of capsized boats and "swimmers," and the joy and instruction of slalom. This volume contains more than two hundred original adventures.

Aimed at beginners, Lucid Dreaming, Plain and Simple shows the reader how to enter and fully experience the lucid dreaming. Among the amazing things Waggoner and McCready teach readers are how to: consciously decide what actions to perform explore dream space (or the contents of your subconscious)

interact with dream figures conduct personal and scientific experiments be free of waking state limitations (e.g., flying, walking through walls, and discovering creative solutions to waking issues) This book approaches lucid dreaming from a more cognitive psychology stance, and focuses more on how to lucid dream and how to use lucid dream techniques for personal growth, insight and transformation. Whether a reader is completely new to lucid dreaming or someone who has experienced that incredible moment of realizing, "This is a dream!", readers will learn valuable tips and techniques gleaned from scientific research and decades of experience to explore this unique state of awareness more deeply.

Volume 2: Physical Properties of Nanostructured Materials and Their Applications of Nanotechnology: The Physics of Nanomaterials (2-volume set) provides a good overview of the main techniques of the working principles and the type of structures that can be produced with nanomaterials. Specifically, Volume 2 discusses the mechanical, electrical, and optical properties of nanostructures as well as nanomagnetism, spintronics, spin dynamics, as well as a broad range of applications to illustrate how the physical properties of materials can be manipulated to perform very specific functions. Nanotechnology: The Physics of Nanomaterials (2-volume set) is a comprehensive guide to the various aspects of nanophysics. The author's microscopic approach illustrates how physical principles can be used to understand the basic properties and functioning of low-dimensional systems. It provides an in-depth introduction to the techniques of production and analysis of materials at the nanoscopic level. Much of physics is based on our

understanding of solid-state physics. These volumes show how limitations of size can give rise to new physical properties and quantum effects, which can be exploited in new applications and devices. Volume 1: The Physics of Surfaces and Nanofabrication Techniques provides a broad introduction to nanophysics and nanotechnologies, and the importance of low-dimensional and surface physics is discussed in depth. Chapters in Volume 1 covers the large range of physical preparation techniques available for the production of nanomaterials and nanostructuring. Key features: Provides a comprehensive treatment of nanoscience, covering all major areas of the physics involved in nanostructures, including sample preparation techniques, characterization methods, physical principles, and applications Presents an introduction and summary to each chapter, highlighting the principal ideas of each chapter in a concise manner Includes revision problems that will allow students to assess their progress at the end of each chapter Incorporates the author's 25 years research experience Based on a lecture course the author has given over a period of several years, Nanotechnology: The Physics of Nanomaterials includes the benefit of feedback from students, helping to make the subject matter approachable and appealing to newcomers and students. The volumes will be valuable for courses in nanotechnologies, nanomedicine, nanobiotechnologies etc.

What is philosophy, why does it matter, and how would it be different if women wrote more of it? At a time when the importance of philosophy, and the humanities in general, is being questioned and at a time when the question of gender equality is a huge public question, 22 women in philosophy lay out in this book how they think of philosophy, what they actually do, and how that is applied to actual problems. By bringing together accounts of the personal experiences of women in philosophy, this book provides a new understanding of the ways in which the place of women in philosophy has changed in recent decades while also introducing the reader to the nature and the value of philosophy.

This volume is addressed to researchers in the field of phraseology, and to teachers, translators and lexicographers. It is a collection of essays offering a comprehensive, modern analysis of phrasemes, embracing a wide range of subjects and themes, from linguistic, both applied and theoretical, to cultural aspects. The contrastive approach underlying this variety of themes allows the divergences and analogies between phraseological units in two or more languages to be outlined. The languages compared here are both major and minor, European and non-European, and the text includes contrastive analyses of the most commonly investigated languages (French-German, English-Spanish, Russian-German), as well as some less frequently investigated languages (like Ukrainian, Romanian, Georgian and Thai), which are not as well-represented in phraseological description, despite their scientific interest.

"The work analyses law enforcement cooperation mechanisms within the socio-legal framework of global normmaking. The strategies addressed range from legal frameworks facilitating cooperation to formal and informal police networks and cooperation practices. The study also takes into account crime-specific engagement, for example campaigns focusing on drug crimes, terrorism, financial crime, kidnappings and other offences. It explores challenges in policing practice and human rights protection in each region that could be countered by existing strategies in another. As regions usually develop more advanced cooperation mechanisms than exist at a global scale, strategies found in the former could help find solutions for the latter. To map existing strategies and assess their impact on both human rights and policing practice this study relies on an assessment of the primary and secondary literature sources in each region as well as interviews with practitioners ranging from senior police officers to prosecutors, government officials, customs and military staff"--

These artists, heeding the call of Constructivist manifestos to abandon the nonobjective painting and sculpture of the early Russian avant-garde and enter into Soviet industrial production, aimed to work as "artist-engineers" to produce useful objects for everyday life in the new socialist collective." "Kiaer shows how these artists elaborated on the theory of the socialist object-as-comrade in the practice of their art. They broke with the traditional model of the autonomous avant-garde, Kiaer argues, in order to participate more fully in the political project of the Soviet state. She analyzes Constructivism's attempt to develop modernist forms to forge a new comradely relationship between human subjects and the mass-produced objects of modernity."--BOOK JACKET.

There is more to setting up a successful business than just a good idea. Creating a Business examines concisely all the relevant aspects: the excitement and satisfaction that business entails, the challenges that face the entrepreneur, the risks that lie in wait. The textbook is organized around a practical example: a company setting out to launch a new line of clothing. Aspects of setting up a business, including management, marketing, legislation, and financial management are examined. Including pedagogical features, such as end-of-chapter questions and illustrations, Creating a Business will interest students of small business and entrepreneurship.

This book highlights some of the unique aspects of spatio-temporal graph data from the perspectives of modeling and developing scalable algorithms. The authors discuss in the first part of this book, the semantic aspects of spatio-temporal graph data in two application domains, viz., urban transportation and social networks. Then the authors present representational models and data structures, which can effectively capture these semantics, while ensuring support for computationally scalable algorithms. In the first part of the book, the authors describe algorithmic development issues in spatio-temporal graph data. These algorithms internally use the semantically rich data structures developed in the earlier part of this book. Finally, the authors introduce some upcoming spatio-temporal graph datasets,

such as engine measurement data, and discuss some open research problems in the area. This book will be useful as a secondary text for advanced-level students entering into relevant fields of computer science, such as transportation and urban planning. It may also be useful for researchers and practitioners in the field of navigational algorithms.

The Business of Pandemics

A promising series debut with engaging characters, social commentary, and a Victorian twist on the ever popular upstairs-downstairs storyline First in a brand-new Victorian mystery series featuring steward Matthew Rowsley and housekeeper Mrs Faulkner as an engaging detective duo. Newly appointed as land agent to the youthful Lord Croft, Matthew Rowsley finds plenty to keep him busy as he attends to his lordship's neglected country estate. But he's distracted from his tasks by the disappearance of a young housemaid. Has Maggie really eloped with a young man, as her mother seems to think - or is the truth rather more sinister? What's been going on behind the scenes at the grand country estate and where has his lordship disappeared to? Teaming up with housekeeper Mrs Faulkner to get to the bottom of the matter, Matthew uncovers a number of disturbing secrets, scandals and simmering tensions within the household. Something rotten is going on at Thorncroft - and it's up to Matthew and Mrs Faulkner to unearth the truth.

New Perspectives on Virtual and Augmented Reality discusses the possibilities of using virtual and augmented reality in the role of innovative pedagogy, where there is an urgent need to find ways to teach and support learning in a transformed learning environment. Technology creates opportunities to learn differently and presents challenges for education. Virtual reality solutions can be exciting, create interest in learning, make learning more accessible and make learning faster. This book analyses the capabilities of virtual, augmented and mixed reality by providing ideas on how to make learning more effective, how existing VR/AR solutions can be used as learning tools and how a learning process can be structured. The virtual reality (VR) solutions can be used successfully for educational purposes as their use can contribute to the construction of knowledge and the development of metacognitive processes. They also contribute to inclusive education by providing access to knowledge that would not otherwise be available. This book will be of great interest to academics, researchers and post-graduate students in the field of educational technology.

Nanotechnologies: The Physics of Nanomaterials

African nations have an underdeveloped industrial and economic base such as their water supply, electrical systems, roads, railways, etc. Massive funding is required to build each of these basic services to the levels of developed nations – funding they don't have. Many African countries rely on assistance from the government and global companies looking to invest or facilitate projects in the region. And for a variety of reasons, many of these projects fail or are inadequate to fulfil the needs of the nation. In order to facilitate their own economic development, African nations need to cultivate efficient project management practices and policies that will help them achieve their goal of sustainability. This book by a multidisciplinary project management consultant, contributes to the body of knowledge that each African country can attain and sustain economic development by suggesting how to eliminate and correct most causes of failures of projects in construction, water treatment, electricity and renewable energy. It suggests that they should also be able to obtain the sustainable harvesting of the benefits of project deliverables which have been planned for in order to implement the various aspects of their economic development. The suggestions in this book will make a difference in project delivery and are comprehensive enough to create a root-and-branch change which will affect the people involved in making decision on projects and their delivery. Thus, project management teams and their managers, organization decision makers, companies looking to invest in the region, and politicians who plan the economy have to understand the causes of unhelpful practices and what needs to be done in order to produce productive and effective delivery of long-term sustainable project. The principal goal of this book is to advise public and private companies, and international organizations conducting projects in Africa on how to prepare themselves, their businesses and enterprises to solve the problems that cause failure of projects and abandonment of project deliverables. The book also recommends the necessity for a commercial enterprise or government entity to prepare and develop its vision, mission, and strategic objects to constitute the basis of a business plan which should be implemented for successful operations. After first identifying various failed and abandoned projects in Nigeria, Ghana and South Africa, the author provides an analysis of why these projects failed or were abandoned. By using methodologies of Organizational

Project Management (OPM), Project Portfolio Management (PPM) and project management techniques, he suggests a framework for project delivery which could be used as a foundational structure and platform that will address the problem and provide solutions for the achievement of successful and sustainable project delivery in Africa.

Berrr's Vow

Transparency and Apperception: Exploring the Kantian Roots of a Contemporary Debate explores the links between the idea that belief is transparent and Kant's claims about apperception. Transparency is the idea that a person can answer questions about whether she, for instance, believes something by considering, not her own psychological states, but the objects and properties the belief is about. This marks a sharp contrast between a first-person and third-person perspective on one's current mental states. This idea has deep roots in Kant's doctrine of apperception, the claim that the human mind is essentially self-conscious, and Kant held that it underlies the responsibility that a person has for certain of their own mental states. Nevertheless, the idea of transparency and its roots in apperception remain obscure and give rise to difficult methodological and exegetical questions. The contributions in this work address these questions and will be required reading for anyone working on this intersection of the philosophy of mind and language, and epistemology. The chapters in this book were originally published in a special issue of the Canadian Journal of Philosophy.

Provides Step-by-Step Instruction Structural Analysis: Principles, Methods and Modelling outlines the fundamentals involved in analyzing engineering structures, and effectively presents the derivations used for analytical and numerical formulations. This text explains practical and relevant concepts, and lays down the foundation for a solid mathematical background that incorporates MATLAB® (no prior knowledge of MATLAB is necessary), and includes numerous worked examples. Effectively Analyze Engineering Structures Divided into four parts, the text focuses on the analysis of statically determinate structures. It evaluates basic concepts and procedures, examines the classical methods for the analysis of statically indeterminate structures, and explores the stiffness method of analysis that reinforces most computer applications and commercially available structural analysis software. In addition, it covers advanced topics that include the finite element method, structural stability, and problems involving material nonlinearity. MATLAB® files for selected worked examples are available from the book's website. Resources available from CRC Press for lecturers adopting the book include: A solutions manual for all the problems posed in the book Nearly 2000 PowerPoint presentations suitable for use in lectures for each chapter in the book Revision videos of selected lectures with added narration Figure slides Structural Analysis: Principles, Methods and Modelling exposes civil and structural engineering undergraduates to the essentials of structural analysis, and serves as a resource for students and practicing professionals in solving a range of engineering problems.

This book focuses on news silence in Zimbabwe, taking as a point of departure the (in)famous blank spaces (whiteouts) which newspapers published to protest official censorship policy imposed by the Rhodesian government from the mid-1960s to the end of that decade. Based on archived news content, the author investigates the cause(s) of the disappearance of blank spaces in Zimbabwe's newspapers and establishes whether and how the blank spaces may have been continued by stealth and proposes a model of doing journalism where news is inclusive, just and less productive of blank spaces. The author explores the broader ramifications of news silences, tacit or covert on society's sense of the world and their place in it. It questions whether and how news media continued with the practice of epistemic deletions and continue to draw on the colonial archive for conceptual maps with which to define and interpret contemporary postcolonial realities and challenges in Zimbabwe. This book will be of interest to scholars, researchers and academics researching the press in contemporary Africa, critical media analysis, media and society studies, and news as discourse.

Nations and businesses across the globe have been working through the difficulties of dealing with the COVID-19 pandemic. Industry, academia, NGOs, and governments have been "feverishly" searching for ways to address this deadly virus, which may continue to spread for at least the next year and perhaps beyond (in terms of a resurgence and different strains). From a business standpoint, there have been dramatic effects on logistics and supply chains, economic downfalls, bailouts of major industries and small businesses, and far-reaching calamities from around the world. Even though the COVID-19 story is still in its making, this book focuses on the business of pandemics as applied to COVID-19. The book brings together a global panel of experts across industries and NGOs to help guide business executives and managers through the complex array of issues affecting business in the time of a pandemic. Offering solutions to the business of pandemics as applied to COVID-19, the book is written for organizational decision makers and leaders, as well as those involved in crisis management, public health, and related fields. Its chapters focus on key areas that relate to the business of pandemics, including Lessons learned to date Big data and simulation Logistics and supply-chain management challenges Conducting global business virtually Global economic impact Media and risk communication IT infrastructure and networking

In the current United States (U.S.) context, we are facing a constitutional crisis with frequent government shutdowns and new debates surrounding immigration, climate change, budgeting practices, and the balance of power. With competing interests, unclear policy, and inconsistent leadership directives, the question becomes: How do contemporary bureaucrats make sense of this ethically turbulent environment? This collection provides a lens for viewing administrative decision-making and behavior from a constitutional basis, as contemporary bureaucrats navigate uncharted territory. *Ethics for Contemporary Bureaucrats* is organized around three constitutional values: freedom, property, and social equity. These themes are based on emerging trends in public administration and balanced with traditional ethical models. Each chapter provides an overview of a contemporary ethical issue, identifies key actors, institutions, legal and legislative policy, and offers normative and practical recommendations to address the challenges the issue poses. Rooted in a respected and time-tested intellectual history, this volume speaks to bureaucrats in a modern era of governance. It is ideally suited to educate students, scholars, and public servants on constitutional values and legal precedent as a basis for ethics in the public sector.

The TCP/IP protocol suite has become the de facto standard for computer

communications in today's networked world. The ubiquitous implementation of a specific networking standard has led to an incredible dependence on the applications enabled by it. Today, we use the TCP/IP protocols and the Internet not only for entertainment and information, but to conduct our business by performing transactions, buying and selling products, and delivering services to customers. We are continually extending the set of applications that leverage TCP/IP, thereby driving the need for further infrastructure support. It is our hope that both the novice and the expert will find useful information in this publication.

School Leadership ` Jon Prosser has put together an eclectic volume. School Culture is not isolated from out of school forces, most of the authors argue Jon Prosser and Terry Warbuton's piece analyzing the visual representation of schools and teaching shows this in a looking-glass manner. The different chapters challenge us to think again about what we mean by ethos and atmosphere. What the volume demonstrates is just how difficult and challenging it is to define what constitutes a school's culture' - Journal of Education for Teaching School culture is today one of the most important themes in education and educational research. This book draws on a wide range of contemporary perspectives to provide an insight into the key issues and concepts which underpin school culture. The first part of the book is concerned with culture as an holistic concept. The second part adopts the stance that school culture is the sum of its subcultures. The contributors focus on significant groups such as teachers and students, or theme, for example sexuality, and examine in depth the nature and character of schooling.

This comprehensive book unveils the working relationship of blockchain and the fog/edge computing. The contents of the book have been designed in such a way that the reader will not only understand blockchain and fog/edge computing but will also understand their co-existence and their collaborative power to solve a range of versatile problems. The first part of the book covers fundamental concepts and the applications of blockchain-enabled fog and edge computing. These include: Internet of Things, Tactile Internet, Smart City; and E-challan in the Internet of Vehicles. The second part of the book covers security and privacy related issues of blockchain-enabled fog and edge computing. These include, hardware primitive based Physical Unclonable Functions; Secure Management Systems; security of Edge and Cloud in the presence of blockchain; secure storage in fog using blockchain; and using differential privacy for edge-based Smart Grid over blockchain. This book is written for students, computer scientists, researchers and developers, who wish to work in the domain of blockchain and fog/edge computing. One of the unique features of this book is highlighting the issues, challenges, and future research directions associated with Blockchain-enabled fog and edge computing paradigm. We hope the readers will consider this book a valuable addition in the domain of Blockchain and fog/edge computing.

Working With Fathers in Psychoanalytic Parent-Infant Psychotherapy interfaces theoretical ideas about fatherhood and their incorporation into the clinical practice of psychoanalytic parent-infant psychotherapy. Often, when a family attends parent-infant psychotherapy, issues of the father are eclipsed by attention to the mother, who is usually the identified patient. Until now relatively neglected in the literature, this book attends to both the barriers to psychological work with the father, and to ways in which he can be engaged in a therapeutic process. In this book, Tessa Baradon brings together some of the most eminent clinicians and academics in the field of parent-infant psychotherapy, in a layered collection of theoretical and clinical contributions. She and her co-discussants, Björn Salomonsson and Kai von Klitzing, conclude with an integration and critique of the themes presented, exploring the ideas of their fellow contributors and expanding on the central themes of the work. Working With Fathers in Psychoanalytic Parent-Infant Psychotherapy will be of interest to mental health practitioners working with infants, who will learn that each individual and the family as a system can benefit from such an inclusive approach.

Blessing is God's idea--it's the first thing He did when He made Adam and Eve, and it's the last thing Jesus did before He ascended into heaven. And yet many of us picture God as a grumpy old man who measures out blessing in measly thimblefuls. Building on her book *The Promise of Blessing*, which explores the Aaronic blessing from Numbers 6, this encouraging devotional from Kate Patterson offers daily opportunities to see God afresh through that shining blessing made to God's people as they wandered in the desert. Though thousands of years old, this blessing still holds surprising truths for God's children today. With reflections, Scripture, and prayer prompts, Patterson looks at each phrase of God's blessing in Numbers 6. Each day shares a significant discovery about the God at the heart of our faith--a God who loves us and longs to bless His people so they can be a blessing to others. For those wanting to know God's blessing for themselves, this inviting giftbook will bless not only them but also those around them.
