Accountancy I Survived Tax Season

Designed as a textbook for undergraduate students in various engineering disciplines—Mechanical, Civil, Industrial Engineering, Electronics Engineer-ing and Computer Science—and for postgraduate students in Industrial Engineering and Water Resource Management, this comprehensive and well-organized book, now in its Second Edition, shows how complex economic decisions can be made from a number of given alternatives. It provides the managers not only a sound basis but also a clear-cut approach to making decisions. These decisions will ultimately result in minimizing costs and/or maximizing benefits. What is more, the book adequately illustrates the concepts with numerical problems and Indian cases. While retaining all the chapters of the previous edition, the book adds a number of topics to make it more comprehensive and more student friendly. What's New to This Edition

- Discusses different types of costs such as average cost, recurring cost, and life cycle cost.
- Deals with different types of cost estimating models, index numbers and capital allowance.
- Covers the basics of nondeterministic decision making.
- Describes the meaning of cash flows with probability distributions and decision making, and selection of alternatives using simulation.
- Discusses the basic concepts of Accounting.

This book, which is profusely illustrated with worked-out examples and a number of diagrams

and tables, should prove extremely useful not only as a text but also as a reference for those offering courses in such areas as Project Management, Production Management, and Financial Management.

Overlord, Vol. 8 (manga)

A comprehensive guide to understanding and practicing Vedic astrology, the art of jyotish. • Teaches beginners how to read and interpret Vedic

astrology charts, based on their own birth chart as well as the birth charts of 112 notable people. • Shows how to use Vedic astrology to anticipate upcoming events and direct the cosmic energies of one's life toward a positive future outcome. For over 5,000 years the people of India have used jyotish, or Vedic astrology, to anticipate future influences and make major decisions. Now Andrew Bloomfield brings this increasingly popular tool to the West in an easy-to-follow, comprehensive format, providing the reader with everything needed to practice the Indian art of predicting the future. Vedic astrology was codified by the ancient Maharishis to help people achieve the four basic goals of human existence: kama (desire), artha (wealth), dharma (life purpose), and moksha (spiritual growth). Unlike other forms of astrology, Vedic calculations focus more on the primal, unconscious, driving forces linking our thoughts and actions. How to Practice Vedic Astrology shows how to make accurate predictions on when to expect life's changes concerning one's career, love life, children, or spirituality.

Still life has been a popular genre for many hundreds of years, and artists wishing to explore it can find inspirational examples from the time of the romans right up to the present day, encompassing murals from the Italian Renaissance, the lavish floral studies from the Netherlands in the early 17th century, the exuberant handling of the Impressionists, and the surprising new shapes and dimensions introduced by the Cubists and Surrealists. In *The Fundamentals of Drawing Still Life*, Barrington Barber explores the genre in all its richness. A teacher as well as a working artist, the author demonstrates in this book his wealth of experience in leading students through the fundamental steps of learning to draw and onwards by means of practice studies and learning from the work of earlier artists. Whether you are a beginner or are already well-versed in the art of drawing, you will find much in this book to inspire you and to develop your talent.

Comets Burial

A man may be a scoundrel, a crook, a high-phased confidence man, and still work toward a great dream which will be worth far more than the momentary damage his swindles cost. Excerpt Outside Tycho Station on the Moon, Jess Brinker showed Arne Copeland the odd footprints made in the dust by explorers from Mars, fifty million years ago. A man-made cover of clear plastic now kept them from being trampled. "Who hasn't heard about such prints?" Copeland growled laconically. "There's no air or weather here to rub them out--even in eternity. Thanks for showing a fresh-arrived greenhorn around" Copeland was nineteen, tough, willing to learn, but

wary. His wide mouth was usually sullen, his grey eyes a little narrowed in a face that didn't have to be so grim. Back in Iowa he had a girl. Frances. But love had to wait, for he needed the Moon the way Peary had once needed the North Pole. Earth needed it, too--for minerals; as an easier, jump-off point to the planets because of its weak gravity; as a place for astronomical observatories, unhampered by the murk of an atmosphere; as sites for labs experimenting in forces too dangerous to be conducted on a heavily-populated world, and for a dozen other purposes. Young Copeland was ready for blood, sweat, and tears in his impulse to help conquer the lunar wastes. He sized up big, swaggering Jess Brinker, and admitted to himself that this man, who was at least ten years his senior, could easily be a phony, stalking suckers. Yet, Copeland reserved judgment. Like any tenderfoot anywhere, he needed an experienced man to show him the ropes. He already knew the Moon intimately from books: A hell of a silence, some of it beautiful: Huge ringwalls. Blazing sunlight, inky shadow. Grey plains, black sky. Blazing stars, with the great blurry bluish globe of Earth among them. You could yearn to be on the Moon, but you could go bats and die there, too--or turn sour, because the place was too rough for your guts. Afield, you wore a spacesuit, and conversed by helmet radiophone. Otherwise you lived in rooms and holes dug underground, and sealed up. The scant water you dared use was roasted out of gypsum rock. The oxygen you breathed was extracted from lunar oxides by a chemical process. Then air-rejuvenator apparatus re-separated it from the carbon-dioxide you exhaled, so that you could use it over and over. Copeland had read the tales: With that kind of

frugality as the price of survival, lunar prospectors could turn selfish to the point of queerness. Afraid somebody might follow them to their mineral claims, they'd take more pains to leave as little spoor as possible than a fox being tracked by dogs. "Speaking of how footprints last around here," Copeland remarked for the sake of conversation, "I understand you've got to be careful--stick to high ridges, and to parts of the flat maria where there's no old volcanic ash or dust of thermal erosion."

A.W. Tozer calls God the "Composer of the Cosmos," the "Chief Musician of the Universe." God signals the birds to chirp their beautiful tune in the coolness and tranquility of a spring morning, simply because that is what He designed them to do. Each note is wonderfully constructed by God, uniquely bringing praise to His name. With this inspiring perspective on worship, Tozer invites readers to take a deep look at

the ways in which we worship and why. He reminds us that we were created solely for this purpose and that worshipping the Father and seeking His fellowship is our primary task. It is also His delight. The newest revised edition now includes "Worship: The Missing Jewel of the Evangelical Church," first published in the Alliance Life magazine in 1965, and still so profound today.
