If mobile technologies are to be effectively used in education, how do we best implement sustainable mobile solutions for teaching and learning? The aim of this handbook is to support educators and policy makers who are investing in innovations in digital education to develop effective and sustainable mobile learning solutions for higher education environments. Authors from sixteen countries across the Asia-Pacific region have collaborated to share their experiences with developing and implementing mobile learning initiatives. These projects focus on a variety of aspects of mobile learning innovation, from the trial adoption of existing social media platforms on mobile devices and the development of specialised applications or mobile learning systems, to the large-scale, interuniversity implementation of technologies and pedagogies to support mobile learning. Each chapter addresses challenges and solutions at one or more levels of mobile learning innovation within the education system, encompassing the student perspective, the educator perspective, technical processes, policies and organisational strategy, and leadership. The book also offers a unique perspective on the integration of mobile learning innovations within the educational, political and cultural environments of Asia-Pacific countries.

Ramón Zallo offers us with this informative book an overall synthesis of Basque culture, society and history. Thanks to its contents it may be destined to become a road map for understanding some keys about the country of the Basques. The author starts from a broad concept of Basque culture which, while it is not very well known, is proportionally very rich for such a small country. He conceives it as a whole culture and as having a history of its own, although it is very closely related to its surroundings. And its trajectory indicates the need to prioritize its development and singularity in this global world full of uncertainty. In Part One he traces (and vindicates) the cultural and spatial idea of Euskal Herria, and briefly describes its history, society and characteristics, its economic evolution and the political systems of Euskadi, Navarra and Iparralde. He presents a society with deeply-rooted values and a very dense civil society that now needs to review, without amnesia, the tragedies and disappointments of recent years. In Part Two he offers a new vision of each one of the various branches of culture. Giving Euskara the attention that it deserves as the most specific defining trait, the book offers an added dimension through an updated look at the styles, works and names within architecture, the visual, theatre and musical arts, Basque literature in Euskara and Spanish and the different types of heritage. It ends with a gallery of historical and contemporary figures that demonstrate the country's diversity. Its method is descriptive, orderly and not overly interpretative. Interpretation is left to the reader.

Retailers today are drowning in data but lacking in insight. They have so much information at their disposal that they struggle with both how to sort through it, and how to add science to their decision-making process without blunting the art that they correctly believe is a key ingredient of their success. This book reveals how retailers can use data to manage everything from strategic assortment planning, inventory management, and markdowns to improve store-level execution. This data-driven approach to the retail supply chain leads to far greater and faster inventory turns, far fewer and lower discounted goods and services, and

better profit margins. The authors also tease out the personnel issues and the organizational implications of this approach.
