Business India

Innovation is the driving force behind economic growth. The knowledge that fosters innovation builds on both systematic research and serendipity. The availability of new knowledge—be it technological or organizational (social)—is, however, insufficient. An institutional structure must be in place that enhances mutual learning among the actors involved and that stimulates cooperation, as well as competition. This recognition has inspired this volume, which focuses on national innovation systems and sectoral (technology) innovation systems that differ widely between countries, due to their diverse historical paths and distinctive cultural and societal features. With regard to theory, most chapters incorporate a mix of endogenous growth theory and evolutionary thinking. Endogenous growth theory places an emphasis on the interplay between technological knowledge and various structural characteristics of the economy and society, as well as on the results of economic growth. Concepts related to technology development,

accumulation of knowledge on technology, and technology diffusion feature prominently here. In evolutionary thinking, and in particular coevolutionary thinking, the focus is on close links between technology and institutions, whereby the functionality of technology is influenced by certain dynamic interactions with institutional systems. Information technology turns out to be a clear example of such a development.

Volume One traces the history of Opel and Vauxhall separately from inception through to the 1970s and thereafter collectively to 2015. Special attention is devoted to examining innovative engineering features and the role Opel has taken of providing global platforms for GM. Each model is examined individually and supplemented by exhaustive supporting specification tables. The fascinating history of Saab and Lotus begins with their humble beginnings and examines each model in detail and looks at why these unusual marques came under the GM Banner. Included is a penetrating review of Saab through to its unfortunate demise. Volume Two examines unique models and variations of Chevrolet and Buick manufactured in the Southern Hemisphere and Asia but never offered in North America. Daewoo, Wuling and Baojun are other Asian brands covered in detail. This volume concludes with recording the remarkable early success of Holden and its continued independence through to today. Volume Three covers the smaller assembly operations around the world and the evolution of GM's export operations. A brief history of Isuzu, Subaru and Suzuki looks at the three minority interests GM held in Asia. The GM North American model specifications are the most comprehensive to be found in a single book. Global and regional sales statistics are included. GM executives and management from around the globe are listed with the roles they held. An index ensures that these volumes serve as the ideal reference source on GM.

considering in depth the globalization processes that the Korean automobile industry has undertaken. Tracing the development of HMC as it recovered from the failure of its first venture overseas, in Canada, and tried again in India, the authors explore the similarities and differences between the practices which HMC implemented in India and Korea. They highlight the importance of production systems and employment relations as part of HMC's growth, and argue that if Korean companies such as HMC are to compete successfully as global automobile producers they will need to increase the proportion of overseas production, establish global supply chains and improve co-ordination between head office and subsidiaries. Based upon extensive fieldwork in India and Korea, this book is a detailed account of the globalization of the Korean automobile industry and Hyundai Motor Company. Its findings will be of importance to all those who seek to understand the challenges faced by firms that attempt to become global players.
