Innumerable books have been published on (new) concepts of strategy. But when I was mentoring executives during their EMBA or on the job, I could not find a single simple manual about how to apply these concepts to real life. My book is a manual that gives you the steps towards building a strategy. It can also be used as a checklist to assess an existing strategy. It has been compiled for people with years of experience in their function who are relatively new to being involved in a company-wide strategy creation process. At the core, this book is about customer needs and competitive advantage. I have seen courses focus on one or the other. To me, the essence of strategy is establishing a link between both these areas. Strategy Manual is book #2 in the Management Manuals series by Bas van Heel

Boatbuilder's Manual

Log buildings are embedded deeply into North American history and culture. For more than one thousand years, builders have been weaving logs into homes, shelters, barns, and churches. Today, however, the buildings where we live and work are rarely handmade from natural materials. In this context, handcrafted, scribe-fitted natural log buildings are an attractive and uplifting alternative to conventional buildings and building materials. This book tells you what you need to know to build your own log home and also reveals the deep rhythms and patterns of log construction. Author Robert Chambers shows how to take naturally shaped, tapered, round logs and scribe-fit them one to another so that they look like they actually grew together in the woods. The Log Construction Manual is filled with information available nowhere else, including the Log Selection Rules, Chambers's brilliantly simple method for choosing which log to use next; instructions for building hip and valley log rafters and roof trusses from full-round logs; step-by-step directions for laying out the sill logs for virtually any floor plan, including hexagons, prows, and more; state-of-the-art compression-fit saddle notches and underscribing to keep fits tight over time; details on scribing and cutting long grooves and corner notches just like the pros; and more. Chambers also offers advice on organizing and financing a log home project and has loads of experience to share on cutting costs and avoiding common pitfalls. He presents practical ideas for saving money and controlling costs. Although handcrafted log homes are expensive to buy, they are within reach for many as owner-managed building projects. Written concisely with great care in explaining important details, the Log Construction Manual brings clarity, insight, depth, and even humor to the log builder's craft. This is a comprehensive book for log home owner-builders, beginners as well as professionals.

How to Build a Small Two-manual Chamber Pipe Organ

Africa's population and economic growth make it the world's fastest urbanizing continent. While some might still associate Africa with rural development, the future of Africa is, in fact, very urban. This urbanization is a huge challenge in areas with

fragile institutional frameworks and chronic poverty. Many migrants moving to the city end up in self-organized settlements without basic services. One alternative is being offered by developers and investors who have designed and built new towns in Africa that are modelled after Asian and American cities. But is this really a proper alternative? Does one size fit all? 'Urban Africa' brings together authors from various academic, political and design backgrounds; as well as case studies on new towns in, amongst others Ghana, Egypt, South Africa, Angola, Morocco and Kenya. In this way, the book provides a critical narrative about contemporary 'Urban Africa' and the western world's role - if any - in the radical transformations happening today.
