At first glance, one might compare the young Chinese photographer Yang Yong to Nan Goldin or Larry Clark, for he, too creates sexy/abject pictures of marginal urban youth. However, when one examines Yang Yong's work more closely, one connects it with its larger context, the "model" city of Shenzhen. In this light, Yang Yong's work can be seen as a kind of photo-roman that exposes the specific state of being that is shared by his generation, who have immigrated from all over China to reinvent themselves in this artificially created "Special Economic Zone" that is supposed to be a testing ground for China's new urbanization and modernization. Yang Yong is a sensitive and accurate observer of his generation, though his work is by no means documentary: The scenes he depicts are all directed and set up by the artist himself. Perhaps this is why Yang Yong's work always radiates a certain cinematic flair.

Knowledge of heat and fluid flow through porous media finds extensive applications in several engineering devices spanning four major divisions: mechanical, civil, chemical, and bioengineering. This textbook fills the knowledge-gap between available research monographs in porous media and basic thermo-fluids courses required to understand such monographs. Coverage includes fluid flow, conduction, convection, and radiation in porous media as well as porous medium aspects of biological systems. The book includes end-of-chapter problems and an appendix of useful convection correlations.

Web services and Service-Oriented Computing (SOC) have become thriving areas of academic research, joint university/industry research projects, and novel IT products on the market. SOC is the computing paradigm that uses Web services as building blocks for the engineering of composite, distributed applications out of the reusable application logic encapsulated by Web services. Web services could be considered the best-known and most standardized technology in use today for distributed computing over the Internet. This book is the second installment of a two-book collection covering the state-of-the-art of both theoretical and practical aspects of Web services and SOC research and deployments. Advanced Web Services specifically focuses on advanced topics of Web services and SOC and covers topics including Web services transactions, security and trust, Web service management, real-world case studies, and novel perspectives and future directions. The editors present foundational topics in the first book of the collection, Web Services Foundations (Springer, 2013). Together, both books comprise approximately 1400 pages and are the result of an enormous community effort that involved more than 100 authors, comprising the world's leading experts in this field.

In the post-Enron climate corporate executives are increasingly pressured to increase productivity and create an ethical, trustworthy organizational climate. 'Total Performance Scorecard' introduces a concept of organizational improvement and change management that combines the Balanced Scorecard model with the learning organization theory. The TPS contains a personal balanced scorecard, which is tied to an organizational balanced scorecard. These scorecards reflect not only performance goals but personal learning and growth goals as well, and the organizational scorecards also address organizational climate issues. Continuous improvement, change management, 360 degree feedback, and the learning

organization are theories that the TPS makes use of in a very straightforward way. If implemented, the TPS enables a company to tie personal goals to organizational goals and tie personal performance to organizational performance, all within a culture that supports integrity, personal growth, learning, and open communication.
