I*PROMS 2005 is an online web-based conference. It provides a platform for presenting, discussing, and disseminating research results contributed by scientists and industrial practitioners active in the area of intelligent systems and soft computing techniques (such as fuzzy logic, neural networks, evolutionary algorithms, and knowledge-based systems) and their application in different areas of manufacturing. Comprised of 100 peer-reviewed articles, this important resource provides tools to help enterprises achieve goals critical to the future of manufacturing. I*PROMS is an European Union-funded network that involves 30 partner organizations and more than 130 researchers from universities, research organizations, and corporations. * State-of-the-art research results * Leading European researchers and industrial practitioners * Comprehensive collection of indexed and peer-reviewed articles in book format supported by a user-friendly full-text CD-ROM with search functionality

Doctoral Thesis / Dissertation from the year 2006 in the subject Law - Public Law / Administrative Law, grade: Ausgezeichnet, Hiroshima University (Department for Public Law), course: Ph.D. Studium, 142 entries in the bibliography, language: English, abstract: In this thesis a comprehensive discussion of the current immigration and deportation systems of both Japan and Austria provides the basis for qualitative and quantitative comparisons. The first section explains the basic methodology, the idea of comparative public law and respective international regimes that influence the alien law in either or both countries. In the second part the immigration system of both Austria and Japan are explained in considerable detail (introducing only high-profile case law, though) including new legislation introduced in most recent years. The system of residence titles in both countries is discussed with reference to particular group of immigrants such as family members of already residing foreign nationals, work related immigration, short-term and long-term visitors. An overview of the respective organization of the immigration control administration is provided before the last chapter of part two compares the immigration laws of both countries. The quantitative comparison employs, extends and adjusts the Quantitative Index for the Integration of Immigrants by H. Waldrauch (associated also with the work of Prof. U. Davey). Part three is extensively discusses the system of "termination of stay" in both countries. This also includes the newly introduced (2004) revocation of residence titles (zairyu shikaku no torikeshi) and the departure order (shukkoku meirei) on the Japanese side and the new system of residence

bans (Aufenthaltsverbote) etc. on the Austrian side (2005). This part also features (1) detailed case law on both systems (for Japan particularly in regard to the special residence permit), (2) a short explanation of detention facilities and detention related problems,"

American Dream

International Directory of Company Histories

Abstract: Artificial intelligence has already been applied to many areas since its official birth in 1956, but most of the applications ended up in great disappointments as the benefits they reaped were very low. Due to this reason the vast interest in applying this relatively young technology to business calmed down in the late seventies when scientists recognized that the current intelligent systems were not yet plug-and-play solutions, hence mature enough to fully meet the business needs and requirements at that time. However, the limited commercial applicability of artificial intelligence in the past has to be rethought today as with the significant progress in artificial intelligence research and the growth of electronic commerce conducted over the World Wide Web new opportunities for business applications of artificial intelligence have emerged consequently. Nowadays horizontal and vertical electronic commerce is significantly driven by intelligent applications. Their employment in electronic

businesses may well generate huge returns on investments, providing a technology-based response to increasing competition, the volatility of business models, and the pace of technology change . Despite the wide assumption that artificial intelligence will have a major impact on Internet-related businesses today and especially in the next years to come, it is uncertain to what extent it performs and will perform that way. The purpose of this thesis is to analyse, assess and evaluate the potential of commercial applications of artificial intelligence in electronic businesses. Therefore the main research question of this paper is whether artificial intelligence is reasonably applicable in Internet-related businesses, first in terms of effectiveness and second in terms of efficiency. In the assessment the application of artificial intelligence in electronic businesses is represented by the employment of intelligent agents. In harmony with the major research question emphasized above, the paper provides a thorough discussion about the economic impact of the most common and relevant application types of intelligent agents on electronic commerce environments. In addition the driving underlying technologies of intelligent agents are analysed with respect to artificial intelligence techniques and methods, and current standardisation efforts. []

Intelligent Systems Report

Intelligent Networks: Telecommunications Solutions for the 1990s addresses the telecommunications perspective of the 1990s and the problems involved in the transition from where we are now to where we should be within the next decade. It will appeal to managers as well as specialists interested in how communications and information technologies will evolve during the coming five to seven years. Valuable information on how they can use the new products becoming available to their company's

advantage is also provided. This book is divided into two parts: Part 1 focuses on the strategic aspects of Intelligent Networks, while Part 2 looks into the dynamics and mechanics of computer networks and focuses on transition. Topics discussed in Part 1 include a look into advanced projects currently under development in the U.S. and Japan; the next big steps in deregulation from the viewpoint of the Federal Communications Commission; Artificial Intelligence (AI) implementation in network operations; the establishment of global private networks with AI as the infrastructure; and a discussion regarding the merits of open architectures, ISDN, teleports and bypass, and photonics. Topics discussed in Part 2 include system integration; a case study of Union Bank of Switzerland and how an Intelligent Network documentation database can be used to increase the quality of network design, improve upon the reliability of its implementation, automate diagnostics and facilitate maintenance, provide quality histories for different vendors, and swamp the costs associated with networking. Part 2 also includes a discussion regarding the prerequisites for system reliability; management's role in cost-effectiveness; telecommunications tariffs and the architectural impact on costing; and "how to" tips for negotiating with vendors. This book provides valuable insight into the telecommunications technologies developing over the next 10 years and should be considered required reading for all professionals within the telecommunications industry, finance, and other fields in which data communication plays a vital role.

In this definitive work, two-time Pulitzer finalist Jason DeParle, author of *A Good Provider Is One Who Leaves*, cuts between the mean streets of Milwaukee and the corridors of Washington to produce a masterpiece of literary journalism. At the heart of the story are three cousins whose different lives follow similar trajectories. Leaving welfare, Angie puts her heart in her work. Jewell bets on an imprisoned man. Opal guards a tragic secret that threatens her kids and her life. DeParle traces their family history back six generations to slavery and weaves poor people, politicians, reformers, and rogues into a spellbinding epic. With a vivid sense of humanity, DeParle demonstrates that although we live in a country where anyone can make it, generation after generation some families don't. To read *American Dream* is to understand why.

an overview of the most salient issues, the experts collected in this work present their own novel visions of the future and offer suggestions for adapting to a more symbiotic economic relationship with AI. These suggestions include different modes of dealing with education, aging workers, government policies, and the machines themselves. Ultimately, they lay out a whole new approach to economics, one in which we learn to merge with and adapt to our increasingly intelligent creations.

Medical Herald

The first volume of the Eurasian Studies in Business and Economics, the official proceedings series of the Eurasia Business and Economics Society (EBES), includes selected papers from the 13th EBES Conference held in Istanbul in 2014. This volume covers theoretical and empirical contributions in the areas of innovation, entrepreneurship, HR, banking and finance. An eclectic set of methodologies and contributions from experts across the World makes this volume a valued work of reference. This volume also provides a timely opportunity to colleagues, professionals and students to catch up with the most recent studies in different fields and empirical findings on many countries and regions.
