This book is about ecosystem mechanics and how to generate revenue through ecosystems and partnerships in the software industry. Topics include: economic foundations, value chains, business and partnering models as well as examples from Google, Microsoft, SAP, OpenSource among many others. Preface by Karl-Heinz Streibich, CEO of Software AG and Executive Member of BITKOM, the German Federal Association for IT, Tele-communications and New Media on "Software Clusters." Industry Comments: Thomas Koulopoulos, Founder and CEO of Delphi Group, author of multiple bestselling books on IT and business trends, futurist, opinion leader www.TKspeaks.com "Complexity and scale of the software industry is daunting. Partnering in this maze of players and relationships is like climbing Everest without a guide. This book is your GPS to the software ecosystem. Popp and Meyer did a great job distilling and explaining essential principles, such as the software industry value chain, many types of business models, and how all these can be leveraged to help your business grow and thrive. This book is a must read for anyone trying to navigate the chaos of the software landscape " Franz Baljer, President of the International Association for SAP Partners www.ia4sp.org and SAP Alliance Manager at T-Systems." "This book helps people in our industry since it provides deep insight into partnering and alliance management. We are proud that knowledge and experiences of our members have contributed to this book."

Since the September 11, 2001 terrorist attacks on the World Trade Center, many in the New York City area have become concerned about the possible consequences of a similar attack on the Indian Point nuclear power plants—located about 40 miles from Manhattan, and have made calls for their closure. Any closure, however, would require actions to replace the 2000 MW of power supplied by the

plants. To examine this issue in detail, the Congress directed DOE to request a study from the NRC of options for replacing the power. This report presents detailed review of both demand and supply options for replacing that power as well as meeting expected demand growth in the region. It also assesses institutional considerations for these options along with their expected impacts. Finally, the report provides an analysis of scenarios for implementing the replacement options using simulation modeling.

For mergers and acquisitions in the software industry this book lays the foundation for successful due diligence. Based on methodological foundations, a business model driven approach for due diligence is presented. The key difference between this book and other due diligence books: this book focuses on a business model driven approach, M&A processes, M&A organization and software industry specifics. The book focuses on four goals. First, it focuses on creating a holistic view of acquisition targets using business models. Second, the book defines differences of the software industry to other industries. Third, the book tries to lay the foundation for standardization of due diligence activities. It also analyses the right setup for acquirers to successfully carry out acquisitions. Fourth, it elaborates on typical business models, business ecosystems and partnerships in the software industry. Many examples from real life due diligence activities and many hints make this book a valuable resource for business professionals in mergers and acquisitions in all industries.

The application of construction dispute procedures has changed dramatically in the last decade. This has resulted in an increased use of Alternative Dispute Resolution in many countries, and mediation in particular. Construction is one of the major industries using mediation, in the UK and in many other countries such as the US, China, Australia and New Zealand. This expansion in mediation has been helped by encouragement from governments, although it takes diverse forms in different

legal jurisdictions, for example: court rules to encourage this use (as in the US and UK); the courts' own mediation schemes or programmes, or legislation-backed programmes; or the use of industry driven mediation clauses in standard form contracts. These developments have taken place extremely rapidly. They represent significant changes to the legal environment within which the international construction industry conducts its business but, to date, there has been little research on their impact. All these initiatives have inevitably led to a developing legal jurisprudence concerned with the validity of contract clauses or with providing statutory interpretation of the rules requiring or governing practice. This has important consequences for the construction industry because legal uncertainty increases the likelihood of dispute, which is not only costly for the disputants but can be damaging to national and global economies. This book identifies the emerging international practices within construction mediation, and seeks solutions to the many legal and commercial challenges which they pose. It presents an international collection of reviews by experts, and allows a comparative commentary on the practice of construction mediation and the legal challenges facing its development.

Mergent International News Reports

Described as "Who owns whom, the family tree of every major corporation in America," the directory is indexed by name (parent and subsidiary), geographic location, Standard Industrial Classification (SIC) Code, and corporate responsibility.
