Children are one of the largest new user groups of mobile technology -- from phones to micro-laptops to

electronic toys. These products are both lauded and criticized, especially when it comes to their role in education and learning. The need has never been greater to understand how these technologies are being designed and to evaluate their impact worldwide. Mobile Technology for Children brings together contributions from leaders in industry, non-profit organizations, and academia to offer practical solutions for the design and the future of mobile technology for children. *First book to present a multitude of voices on the design, technology, and impact of mobile devices for children and learning *Features contributions from leading academics, designers, and policy makers from nine countries, whose affiliations include Sesame Workshop, LeapFrog Enterprises, Intel, the United Nations, and UNICEF *Each contribution and case study is followed by a best practice overview to help readers consider their own research and design and for a quick reference

ABC Pathfinder Railway Guide

With the explosive increase in the number of mobile devices and applications, it is anticipated that wireless traffic will increase exponentially in the coming years. Moreover, future wireless networks all carry a wide variety of flows, such as video streaming, online gaming, and VoIP, which have various quality of service (QoS) requirements. Therefore, a new mechanism that can provide satisfactory performance to the complete variety of all kinds of flows, in a coherent and unified framework, is needed. In this book, we introduce a framework for real-time wireless networks. This consists of a model that jointly addresses several practical concerns for real-time wireless networks, including per-packet delay bounds, throughput requirements, and heterogeneity of wireless channels. We detail how this framework can be employed to address a wide range of problems, including admission control, packet scheduling, and utility maximization. Table of Contents: Preface / Introduction / A Study of the Base Case / Admission Control / Scheduling Policies / Utility Maximization without Rate Adaptation / Utility Maximization with

Rate Adaptation / Systems with Both Real-Time Flows and Non-Real-Time Flows / Broadcasting and Network Coding / Bibliography / Authors' Biographies

Can You See what I See?

This volume--a collection and synthesis of key research studies since the program's inception over three decades ago--serves as a marker of the significant role that Sesame Street plays in the education and socialization of young children. Editors Shalom M. Fisch and Rosemarie T. Truglio have included contributions from both academics and researchers directly associated with Sesame Street, creating a resource that describes the processes by which educational content and research are integrated into production, reviews major studies on

the impact of Sesame Street on children, and examines the extension of Sesame Street into other cultures and media. In the course of this discussion, the volume also explores broader topics, including methodological issues in conducting media-based research with young children, the longitudinal impact of preschoolers' viewing of educational versus non-educational television, and crosscultural differences in the treatment of educational content. As the first substantive book on Sesame Street research in more than two decades, "G" is for Growing provides insight into the research process that has informed the development of the program and offers valuable guidelines for the integration of research into future educational endeavors. Intended for readers in media studies, children and the media, developmental studies, and education, this work is an exceptional chronicle of the growth and processes behind what is arguably the most influential program in children's educational television.

Get Ready for 4th Grade Reading

My No No No Day

In Dust or Magic, Bob Hughes delves deep beneath the gloss and the hype surrounding multimedia, to reveal the human beings who make magic, and to show how it happens. The book draws together a wealth of knowledge and experience, with insights from recent science and older creative industries, and reveals the key to designing accomplished interactive

computer-based media. It presents a simple, consistent and convincing paradigm for satisfying and successful creative work, and gives practical advice that will save designers from falling into old traps and re-inventing perfectly good wheels. Dust or Magic is for programmers, writers, artists, animators, and interface designers, for the people who teach, lead and hire them, and also for people who simply want to know how human creativity fares in the new, digital age.

PC Mag

The last 25 years have seen tremendous advances in the study of psychological processes in reading. Our growing body of knowledge on the reading process and reading acquisition has applications to such important problems as the prevention of reading difficulties and the identification of effective instructional practices. This volume summarizes the gains that have been made in key areas of reading research and provides insights on current controversies and debates. The volume is divided into seven parts, with each part begininning with an introductory chapter presenting findings on the topic at hand, followed by one or more classic papers from the author's research program. Issues covered include phonological processes and context effects in reading, the "reading wars" and how they should be resolved, the meaning of the term "dyslexia," and the cognitive effects and benefits of reading. --From publisher's description.

Co-Design for System Acceleration

This book is concerned with studying the co-design methodology in general, and how to determine the more suitable interface mechanism in a co-design system in particular. This is based on the characteristics of the application and those of the target architecture of the system. Guidelines are provided to support the designer's choice of the interface mechanism. Some new trends in co-design and system acceleration are also introduced.

Dust Or Magic

Readers will say, "Yes, yes, yes!" From the moment Bella wakes up, her day goes wrong. She hates her breakfast egg, she won't share, she has a hurting foot, her supper is too hot, and her bath is too cold. And then it's no, no, no to bedtime. But at last a yawn, a story, and a kiss from mother end the day, with the promise of a cheerful tomorrow. Every parent, teacher, and caregiver will respond to this hilariously accurate portrait of one toddler with a case of the Terrible Twos!
