This volume offers a simple, systematic guide to creating a knowledge sharing practice in your organization. It shows how to build the enabling environment and develop the skills needed to capture and share knowledge gained from operational experiences to improve performance and scale-up successes. Its recommendations are grounded on the insights gained from the past seven years of collaboration between the World Bank and its clients around the world—ministries and national agencies operating in various sectors—who are working to strengthen their operations through robust knowledge sharing. While informed by the academic literature on knowledge management and organizational learning, this handbook’s operational background and many real-world examples and tips provide a missing, practical foundation for public sector officials in developing countries and for development practitioners. However, though written with a public sector audience in mind, the overall concepts and approaches will also hold true for most organizations in the private sector and the developed world.

What English Teachers Need to Know, a set of companion texts designed for pre-service teachers and teachers new to the field of ELT, addresses the key question: What do English language teachers need to know and be able to do in order for their students to learn English? These texts work for teachers across different contexts (countries where English is the dominant language, one of the official languages, or taught as a foreign language); different levels (elementary/primary, secondary, college or university, or adult education); and different learning purposes (general English, workplace English, English for academic purposes, or English for specific purposes). Volume I, on understanding learning, provides the background information that teachers need to know and be able to use in their classroom. Volume II, on facilitating learning, covers the three main facets of teaching: planning, instructing, and assessing. Volume III, on designing curriculum, covers the contexts for, processes in, and types of ELT curricula—linguistic based, content-based, learner-centered, and learning-centered. Throughout the three volumes, the focus is on outcomes, that is, student learning. Features • Situated in current research in the field of English language teaching and other disciplines that inform it • Sample data, including classroom vignettes • Three kinds of activities/tasks: Reflect, Explore, and Expand

Innovative Buddhist Women

Are you mad? Have you got nerves of steel? Are you hoping to die soon? If the answers to all the above questions are yes, then you have what it takes to be a driving instructor. Twenty years as a driving instructor has made me appreciate the simple things in life. I spent ten years in the army, serving three tours of Northern Ireland, but none of that training could have possibly prepared me for what I was about to encounter the day I walked into the job center and saw a notice on the wall, which read, "Driving instructors wanted." After qualifying by passing my three exams, I took to the road. This was it; I was on

my own with my pupil. I was excited but at the same time nervous. My first lesson went well. The second lesson, I ended up in a ditch. The third lesson, I just was holding on to anything I could find. I have never been so pleased to arrive home and walk through my front door. Inside this book you will learn how to change gear from the comfort of your bed. You may even understand the logic why pupils think you drive on the right-hand side of the road in the United Kingdom, and if you ask a pupil to follow that bus, you don't expect to end up parked up in the bus station.

Research on driver behaviour has clearly demonstrated that the goals and motivations a driver brings to the driving task are important determinants for driver behaviour. The objective of the book, and of the conference on which it is based, is to describe and discuss recent advances in the study of driving behaviour and driver training. It bridges the gap between practitioners in road safety, and theoreticians investigating driving behaviour, from a number of different perspectives and related disciplines. The book is timely in its aim of defining new approaches to driver training methodology based on decades of empirical research on driver behaviour. The contributing road safety researchers and professionals consider the kinds of methods that are effective in teaching drivers the higher-level skills needed to be a safe competent driver. The readership includes road safety researchers from a variety of different academic backgrounds, senior practitioners

in the field from regulatory authorities and professional driver training organisations such as the police service, and private and public sector personnel who are concerned with improving road safety.

This volume offers a systematic review of the literature on communication education and instruction. Making meta-analysis findings accessible and relevant, the editors of this volume approach the topic from the perspective that meta-analysis serves as a useful tool for summarizing experiments and for determining how and why specific teaching and learning experiences have positive student outcomes. The topics covered here are meaningful and relevant to classroom practice, and each chapter offers a summary of existing quantitative social science research using meta-analysis. With contributions from experienced researchers throughout the communication discipline, this work provides a unique analysis of research in instructional communication. Taken together, the chapters in this volume enhance understanding of behaviors, practices, and processes that promote positive student outcomes. This book is

Parliamentary Debates (Hansard).

Over the last 25 years, cognitive load theory has become one of the world's leading theories of instructional design. It is heavily researched by many educational and psychological researchers and is familiar to most practicing instructional designers, especially designers using computer and related technologies. The theory can be divided into two aspects that closely inter-relate and influence each other: human cognitive architecture and the instructional designs and prescriptions that flow from that architecture. The cognitive architecture is based on biological evolution. The resulting description of human cognitive architecture is novel and accordingly, the instructional designs that flow from the architecture also are novel. All instructional procedures are routinely tested using randomized, controlled experiments. Roughly 1/3 of the book will be devoted to cognitive architecture and its

evolutionary base with 2/3 devoted to the instructional implications that follow, including technology-based instruction. Researchers, teachers and instructional designers need the book because of the explosion of interest in cognitive load theory over the last few years. The theory is represented in countless journal articles but a detailed, modern overview presenting the theory and its implications in one location is not available.

Obtaining a driving licence is now more complex and demanding than ever before. With higher standards for each of the theory, hazard perception and practical tests, candidates will need as much information and guidance as possible. Furthermore, the demand for LGV instructors at all levels is increasing as the industry responds to a severe skills shortage. A forthcoming EU directive will also require the retraining of drivers and instructors who wish to be included on the Driving Standards Agency (DSA) register. The LGV Learner Driver's Guide provides an overview of all the requirements for obtaining a LGV Drivers licence for both drivers and instructors. It provides comprehensive guidance on the theory and practical tests, the main points of law for the LGV drivers and identifies areas of responsible driving.

Dedicated chapters on the role of the LGV instructor and the LGV instructors exam is also included. Appendices include useful addresses, contact details for test centres and DSA accredited instructor training centres. The book is essential reading for aspiring drivers, drivers who will need to re-train under new EU legislation and instructors aiming to be included on the DSA register.

Featuring an interdisciplinary, developmental, ecological-systems framework, *Human Behavior for Social Work Practice, Third Edition* helps students implement a consistent system through which to approach multifaceted social issues in any environment. Students will learn that by effectively connecting theory to practice, they can develop successful strategies to use as they encounter complex issues currently facing social workers, whether it be in inner city schools or rural nursing homes with individuals of different ages, ethnicities, and socioeconomic status. This text examines social work issues at various points in human development using specific programs and policies to illustrate developmentally- and culturally-sensitive social work practice. Excerpts from interviews with practicing social workers highlight real-life experiences and introduce a variety of policy contexts. Part 3 of the text focuses on social work issues affecting individuals across the lifespan and around the globe through chapters on disability and stigmatization; race, racism and resistance; women and gender; and

In this galvanizing book for all educators, Kristin Souers and Pete Hall explore an urgent and growing issue--childhood trauma--and its profound effect on learning and teaching. Grounded in research and the authors' experience working with trauma-affected students and their teachers, *Fostering Resilient Learners* will help you cultivate a trauma-sensitive learning environment for students across all content areas, grade levels, and educational settings. The authors--a mental health therapist and a veteran principal--provide proven, reliable strategies to help you * Understand what trauma is and how it hinders the learning, motivation, and success of all students in the classroom. * Build strong relationships and create a safe space to enable students to learn at high levels. * Adopt a strengths-based approach that leads you to recalibrate how you view destructive

student behaviors and to perceive what students need to break negative cycles. * Head off frustration and burnout with essential self-care techniques that will help you and your students flourish. Each chapter also includes questions and exercises to encourage reflection and extension of the ideas in this book. As an educator, you face the impact of trauma in the classroom every day. Let this book be your guide to seeking solutions rather than dwelling on problems, to building relationships that allow students to grow, thrive, and--most assuredly--learn at high levels.

Shake Up Learning

Science, engineering, and technology permeate nearly every facet of modern life and hold the key to solving many of humanity's most pressing current and

future challenges. The United States' position in the global economy is declining, in part because U.S. workers lack fundamental knowledge in these fields. To address the critical issues of U.S. competitiveness and to better prepare the workforce, A Framework for K-12 Science Education proposes a new approach to K-12 science education that will capture students' interest and provide them with the necessary foundational knowledge in the field. A Framework for K-12 Science Education outlines a broad set of expectations for students in science and engineering in grades K-12. These expectations will inform the development of new standards for K-12 science education and, subsequently, revisions to curriculum, instruction, assessment, and professional development for educators. This book identifies three dimensions that convey the core ideas and practices around which science and engineering education in these grades should be built. These three dimensions are: crosscutting concepts that unify the study of science through their common application across science and engineering; scientific and engineering practices; and disciplinary core ideas in the physical sciences, life sciences, and earth and space sciences and for engineering, technology, and the applications of science. The overarching goal is for all high school graduates to have sufficient knowledge of science and engineering to engage in public discussions on science-related issues, be careful consumers of scientific and technical information, and enter the careers of their choice. A Framework for K-12 Science Education is the first step in a process that can inform state-level decisions and achieve a research-grounded basis for improving science instruction and

learning across the country. The book will guide standards developers, teachers, curriculum designers, assessment developers, state and district science administrators, and educators who teach science in informal environments.

Winner of the SAGE/ILTA Award for Best Book on Language Testing 2009 This volume focuses on the social aspects of language testing, including assessment of socially situated language use and societal consequences of language tests. The authors argue that traditional approaches to ensuring social fairness in tests go some way to addressing social concerns, but a broader perspective is necessary to examine the functions of tests on a societal scale. Considers these issues in relation to language assessment in oral proficiency interviews, and to the assessment of second language pragmatics. Student Writing presents an accessible and thought-provoking study of academic writing practices. Informed by 'composition' research from the US and 'academic literacies studies' from the UK, the book challenges current official discourse on writing as a 'skill'. Lillis argues for an approach which sees student writing as social practice. The book draws extensively on a three-year study with ten non-traditional students in higher education and their experience of academic writing. Using case study material - including literacy history interviews, extended discussions with students about their writing of discipline specific essays, and extracts from essays - Lillis identifies the following as three significant dimensions to academic writing: * Access to higher education and to its language and literacy representational resources * Regulation of meaning

making in academic writing * Desire for participation in higher education and for choices over ways of meaning in academic writing. Student Writing: access, regulation, desire raises questions about why academics write as they do, who benefits from such writing, which meanings are valued and how, on what terms 'outsiders' get to be 'insiders' and at what costs.

Riding motorcycles is fun, but author Ken Condon maintains that there is a state of consciousness to be achieved beyond the simple pleasure of riding down the road. Riding in the Zone helps riders find that state of being. It's the experience of being physically and mentally present in the moment, where every sense is sharply attuned to the ride. Your mind becomes silent to the chatter of daily life, and everyday problems seem to dissolve. You feel a deeper appreciation for life. Your body responds to this state of being with precise, fluid movements, you feel in balance, your muscles are relaxed, and it seems as though every input you make is an expression of mastery. This is "the Zone." Condon identifies all of the factors that affect entering the Zone and addresses each one individually, from the development of awareness and mental skills to

mastering physical control of the motorcycle. At the end of each chapter are drills designed to transform the book's ideas into solid, practical riding skills. Riding in the Zone takes riders to the next level in their skill set.
