To read the books of Virginia Stem Owens is to understand what Dylan Thomas once called "the mystery of having been moved by words." Her style is contemplative, ecstatic, tender – always yearning for a purer vision of reality and grace. Wind River Winter is her account of watching the world die and be reborn in

the desolate Wind River mountains of Wyoming. By attuning her mind to the enormous cadence of autumn and winter, she contemplates the balance of life and death?the world's and her own. Her writing, as beautiful as the best of Annie Dillard or John McPhee, will appeal to anyone who finds the power of language as awesome a power as nature itself. Virginia Stem Owens is the author of several books, including the critically acclaimed Feast of Families. She is a frequent contributor to the Reformed Journal and other publications. She lives near Huntsville, Texas.

Beauty--the book, born out of Cooper Hewitt, Smithsonian Design Museum's 2015 Triennial of the same name, curated by Andrea Lipps and Ellen Lupton--showcases some of the most exciting and provocative design created around the globe during the past three years. These pages aim not to emphasize the hidden beauty in the everyday--a beloved teapot or favorite shoe--but to locate transformational beauty in contemporary design that is exuberant, ethereal, atmospheric, experiential, exceptional or sublime. Sixty-two designers represent a vast range of disciplines from architecture, fashion, digital, graphic, and product design, to interiors, hair, nail and lighting design. The objects featured cause us to take pause, catch our breath and get lost in our pursuit to understand or explain them. Designed by the innovative Kimberly Varella, the book is itself a tactile, fluid and provocative interpretation of beauty. Varella's design provides unexpected points of entry, playing with the concepts of beauty by using reflective surfaces, hot pink thread weaving pages together and a "heart" of the book, from which all else flows. Ethereal, Intricate, Extravagant, Transformative, Transgressive, Elemental and Emergent Beauty are the seven themes. Each section includes the individual designers in conversation with the curators about her or his process and beauty's

differing forms, punctuated by rich galleries of their work, generating the ultimate feast for the senses.

Fluorescence microscopy images can be easily integrated into current video and computer image processing systems. People like visual observation; they like to watch a television or computer screen, and fluorescence techniques are thus becoming more and more popular. Since true in vivo experiments are simple to perform, samples can be directly seen and there is always the possibility of manipulating the samples during the experiments; it is an ideal technique for biology and medicine. Images are obtained by a classical (now called wide-field) fluorescence microscope, a confocal scanning microscope, upright or inverted, with epifluorescence or transmission. Computerized image processing may improve definition, and remove glare and scattered light signal. It also makes it possible to compute ratio images (ratio imaging both in excitation and in emission) or lifetime imaging. Image analysis programs may supply a great deal of additional data of various types, starting with calculations of the number of fluorescent objects, their shapes, brightness, etc. Fluorescence microscopy data may be complemented by classical measurement in the cuvette or by flow cytometry.
