Peter Norton's Complete Guide to PC Upgrades

Lacking access to any enforceable configuration standards, anyone attempting to select and configure hardware required to install Solaris for x86 in stand-alone and networked (grouped) configurations, is bound to hit some troublesome and frustrating pitfalls. Written in non-technical language -- supplemented with how-to illustrations, checklists, and rules-of-thumb -- this user-friendly configuration and planning guide takes the mystery out of technical configuration details and walks readers step-by-step through a simple structured approach for making the critical decisions that will ultimately result in trouble-free computer and network hardware operation. Focuses on good planning as the key to successful hardware configuration and installation. Shows how to: determine hardware requirements; select compatible hardware; configure hardware components; design the physical network; troubleshoot installation problems. Features hardware selection and configuration charts; resource contact lists; installation planning checklists; technology tutorials; and network design guidelines. For those who are upgrading hardware for use with Solaris for x86, setting up a small networked group of x86 systems, providing technical support of x86 installations, or putting DOS and Solaris for x86 on the same system.

This book provides the National Academy of Sciences' 1995 review of the technology development program for the remediation of the Department of Energy's weapons complex facilities. It makes scientific, technical, and programmatic recommendations to strengthen technology development within DOE and ensure that it meet its goals of cost effectiveness, safety, and decreased risk. The recommendations address DOE's five focus areas: landfill stabilization; contaminant plume containment and remediation; facility transitioning, decommissioning, and final disposition; mixed waste characterization treatment; and high-level waste in tanks. The book also addresses technologies in areas that cross cut the above focus area programs, namely characterization monitoring and sensor technologies, efficient separations and processing, robotics, and waste disposal.
