Modern businesses generate huge volumes of accounting data on a daily basis. The recent advancements in information technology have given organizations the ability to capture and store data in an efficient and effective manner. However, there is a widening gap between this data storage and usage of the data. Business intelligence techniques can help an organization obtain and process relevant accounting data quickly and cost efficiently. Such techniques include: query and reporting tools, online analytical processing (OLAP), statistical analysis, text mining, data mining, and visualization. Business Intelligence Techniques is a compilation of chapters written by experts in the various areas. While these chapters stand on their own, taken together they provide a comprehensive overview of how to exploit accounting data in the business environment.

The World War I Memoirs of Major General William J. Snow, the U. S. Army's first Chief of Field Artillery. This book has been out of of print since 1941 and includes material that was not published in the original edition. This book focuses on the problems and challenges General Snow faced in mobilizing the Field Artillery for overseas service in France. World War I was widely known as an artillery war. This book is an insiders account of how the U.S. Army's Field Artillery came close to the breaking point and how General Snow tackled these challenges. "'Signposts of Experience' is a brilliant recounting of how the U.S. Field Artillery became the King of Battle for the U.S. Army on the doorstep of the First World War. Major General William Snow's Memoirs as first Chief of Field Artillery, provide artillery and fire support leaders of today a framework of initiative, organization, disciplined training, and exacting standards that has been the backbone of Red Leg pride for over a century. As we reset the Army today and prepare for the future we must ensure that we get 'fires' right. Major General Snow's experiences are a must read for those who wear the crossed cannons of the artillery as well as those that are supported by its fires." -- Lt. Gen. David P. Valcourt, US Army (Ret.), Chief of Field Artillery (2003-2005)

Readings in Management Accounting

In the classroom, ABC looks like a great way to manage a company's resources. But many executives who have tried to implement ABC on a large scale in their organizations have found the approach limiting and frustrating. Why? The employee surveys that companies used to estimate resources required for business activities proved too time-consuming, expensive, and irritating to employees. This book shows you how to implement time-driven activity-based costing (TDABC), an easier and more powerful way to implement ABC. You can now estimate directly the resource demands imposed by each business transaction, product, or customer. The payoff? You spend less time and money obtaining and maintaining TDABC data—and more time addressing problems that TDABC reveals, such as inefficient processes, unprofitable products and customers, and excess capacity. The authors also show how to use TDABC to link strategic planning to operational budgeting, to enhance the due diligence process for mergers and

acquisitions, and to support continuous improvement activities such as lean management and benchmarking. In presenting their model, the authors define the two questions required to build TDABC: 1) How much does it cost per time unit to supply resource capacity for each business process? 2) How much resource capacity (time) is required to perform work for a company's many transactions, products, and customers? The book demonstrates how to develop simple, valid answers to these two questions. Kaplan and Anderson illustrate the TDABC approach with a wealth of case studies, in diverse settings, based on actual implementations.
