story, the author, an engineer, has talked to all surviving Coventry Climax personnel who were involved with the racing engines. The author was given full access to all of Walter Hassan's papers, photographs and engine drawings. After 30 months of original research and writing, this book describes exactly how these famous engines developed from industrial fire pumps to the Hillman Imp, from Le Mans winning Lotus Elites to Formula One winners driven by Stirling Moss and Jack Brabham, right through to the company's takeover by Jaguar in 1963. Viewed through the eyes of an engineer, and the detailed recollections of those who were there, this is a fascinating account of the trials and tribulations of leading edge race engine design from 1952 to 1966.

Since its first appearance in 1950, Pounder's Marine Diesel Engines has served seagoing engineers, students of the Certificates of Competency examinations and the marine engineering industry throughout the world. Each new edition has noted the changes in engine design and the influence of new technology and economic needs on the marine diesel engine. Now in its ninth edition, Pounder's retains the directness of approach and attention to essential detail that characterized its predecessors. There are new chapters on monitoring control and HiMSEN engines as well as information on developments in

Wolseley was one of Britain's leading car manufacturers in vintage days. Its two early managers, Austin and Siddeley, became famous for their own makes of car and Wolseley made a fascinating assortment of products from sledges for Scott of the Antarctic to Count Schilowsky's two-wheel Gyrocar. Austin and Morris fought American firms for its ownership in the 1920s, Morris winning eventually in 1927. The name was used for upmarket versions of first the Morris and then BMC models of the 1950s, when the cars were widely used by the police.

The Chinese are inordinately proud of having invented, among a whole host of other things, the compass (without which the world would have got lost), paper (without which books would not exist), the printing press (ditto), porcelain (no pretty matching chinaware), silk (no decadence), pasta (what would the Italians eat?), the wheelbarrow (how would civilisation have fared without it?) and the bristle

toothbrush. A guide to understanding the Chinese which dispels or confirms preconceived prejudices with humor and insight.

Pounder's Marine Diesel Engines and Gas Turbines

The story of a man that brought his own personal style to the world of industrial design, from automobiles to powerboats. Some 50 years after his design masterpieces wrested styling leadership away from General Motors - Harley Earl. Thirty four years after his untimely death, Virgil Exner's name still remains inexorably linked to the Chrysler Corporation in the minds of car enthusiasts worldwide. For an all too brief period, Exner's name epitomised all that was great and exciting in America. His thrilling automobile designs from the mid-fifties took the world by storm and put Chrysler at the top. His work was nothing less

than a revolution. Until the mid-fifties, engineers, creating cars that were reliable but invariably staid and conservative, had dominated auto design. Exner introduced to Chrysler, firstly with his 'idea cars' then with production models, vehicles that were wanted for their looks but at the same time, were soundly engineered; automobiles that carried classic proportions and gave the illusion of movement even whilst stationary. His design of the 1947 Studebaker established the design pattern for all modern cars and was a huge success. Along with automobile styling, his talents stretched to many other areas of industrial design, from trains to trucks and boats to Buicks. This book gets behind the character of the man, his strengths and weaknesses, his personal tragedies and his vision of modern transport. Uncover why he set up in competition with Raymond Loewy, get the real facts behind historic inaccuracies and why he was made scapegoat for the sales disaster of the early sixties, Then delight in his fine artwork and his love of motor racing. With many previously unseen works of art and family photos among the 150 colour images throughout this is a unique and fascinating insight into a pivotal player in the development of the modern automobile.
