Algebra 1, Student Edition

Homework Done Right shows teachers how homework assignments can connect with the curriculum and how to make it applicable to their students' lives. Educators will learn how to design and implement active, creative assignments that promote useful skills like inquiry, problem solving, and critical thinking. Moving beyond the current "homework debate," this resource is split into three sections to explain the rationale for meaningful homework, how to make it relevant, and how students in different grades respond to it. Additionally, teachers will learn about: Effective homework strategies and sample assignments for all K-12 levels in numerous subject areas Do's and don'ts of homework planning Promoting parent involvement Guidance on helping students develop leadership and collaboration skills through activities such as questioning, evidence gathering, and interviewing Classroom-ready tools, including homework planning forms and other reproducibles When homework assignments are challenging and relevant, students have a new opportunity to engage with learning and will be able to succeed academically!

Glencoe Math, Course 1, Student Edition

Addressed to K-12 teachers, discusses enhancing student achievement through project-based learning with multimedia and offers principles and guidelines to insure that multimedia projects address curriculum standards.

Core Connections

Adding It Up explores how students in pre-K through 8th grade learn mathematics and recommends how teaching, curricula, and teacher education should change to improve mathematics learning during these critical years. The committee identifies five interdependent components of mathematical proficiency and describes how students develop this proficiency. With examples and illustrations, the book presents a portrait of mathematics learning: Research findings on what children know about numbers by the time they arrive in pre-K and the implications for mathematics instruction. Details on the processes by which students acquire mathematical proficiency with whole numbers, rational numbers, and integers, as well as beginning algebra, geometry, measurement, and probability and statistics. The committee discusses what is known from research about teaching for mathematics proficiency, focusing on the interactions between teachers and students around educational materials and how teachers develop proficiency in teaching mathematics.
