Phospholipid technology and applications is an essential reference for technologists developing food and cosmetics products, scientists researching phospholipids in biological and food systems, technologists in fats and oils refining, and scientists developing drugs and drug delivery systems and carriers. The major source of phospholipids is the lecithin recovered during degumming of vegetable oils, particularly soybean oil. This crude material finds uses in its own right but can be purified through a series of processes which eventually lead to individual phospholipid classes such as phosphatidylcholines. It is widely accepted that oil and water do not mix but there are several areas in science and technology where these two distinct phases must coexist in stable emulsions. This is achieved by admixture of amphiphilic molecules of which the phospholipids are important natural examples. Today, phospholipids find many uses in the food industry and in other industries which exploit the amphiphilic nature of these compounds. Further, there are now important procedures by which their amphiphilicity can be optimized for different uses. The early chapters in this book are devoted to the more common glycerol-based phospholipids and cover their structure, source, composition, modification by chemical and enzymatic methods, their physical, chemical, and nutritional properties, and their major uses. The final chapter is

devoted to another kind of phospholipid, the sphingolipids, in which there is a growing interest.

Angelica Kauffman (1741-1807) had an amazing career as a painter of international eminence. Born in Switzerland, and at home in Rome and London, where she was one of the founding members of the Royal Academy of Arts, she always considered her true roots to be the Brengenzerwald of Austria. In addition to her fame as an artist, she was just as known for her refined taste as a salon hostess. This monograph, which accompanies two Austrian exhibitions commemorating the two-hundredth anniversary of the artist's death, is an homage to Angelica Kauffman's life and oeuvre. Oriented toward both art and cultural history, the authors touch on the intriguing question of the relevance of this

exceptional female artist today.

Some would say I have a privileged life. Daughter of the current President of the United States, wealthy, famous, and all things that some girls wish they had. Only I'd dream of having a simple life. A life where I wasn't marrying the scariest man I have ever met. Well, I thought I had just met him, but it turns out,

there's so much I don't know about myself. That's all thanks to a past so twisted, so warped, that no amount of money, or presidential status could wipe it clean. I'm the rebel child. Or as some may see it, the disappointment. I've never cared about expensive wedding gowns, or how much someone paid for a tailored suit. I don't care if your wedding dress is from Walmart, or if it's from some fancy, upscale designer line. So why am I marrying the devil dressed in a thousand-dollar suit? I'm about to find out how I got here. To marrying one of the most powerful men in the country. The road to finding out, though, is paved with darkness, painted with the blood of innocents, and it leads my ass straight to hell. Only this hell is a multi-million-dollar penthouse suite in New York City where Bryant Saint Royal, sits on his throne.

COLLEGE ALGEBRA: REAL MATHEMATICS, REAL PEOPLE is an ideal student and instructor resource for courses that require the use of a graphing calculator. The quality and quantity of the exercises, combined with interesting applications and innovative resources, make teaching easier and help students succeed. Retaining the series' emphasis on student support, selected examples throughout the text

include notations directing students to previous sections to review concepts and skills needed to master the material at hand. The book also achieves accessibility through careful writing and design—including examples with detailed solutions that begin and end on the same page, which maximizes readability. Similarly, side-by-side solutions show algebraic, graphical, and numerical representations of the mathematics and support a variety of learning styles. Reflecting its subtitle, this significant revision focuses more than ever on showing students the relevance of mathematics in their lives and future careers. One of the most accomplished and internationally celebrated artists of the eighteenth century, Angelica Kauffman (1741-1807) established her reputation with sensitive portraits as well as ambitious history paintings. This major study explores the artist's work and career by considering how Kauffman reconciled the public and presumed masculine pursuit of painting with her role as woman artist and arbiter of private taste. Featuring a wealth of new information, this illustrated book demonstrates Kauffman's role in shaping European visual culture, shedding new light on the history of women artists and on art history as a

critical discipline.

With the same design and feature sets as the market leading Precalculus, 8/e, this concise text provides both students and instructors with sound, consistently structured explanations of the mathematical concepts. PRECALCULUS: A CONCISE COURSE is designed to offer a cost-effective, one-semester alternative to the traditional two-semester precalculus text. It contains the features that have made the Larson/Hostetler series a complete solution for both students and instructors: interesting applications, pedagogically effective design, and innovative technology combined with an abundance of carefully developed examples with worked-out solutions and exercises. A Graphical Approach to Precalculus with Limits: A Unit Circle Approach illustrates how the graph of a function can be used to support the solutions of equations and inequalities involving the function. Beginning with linear functions in Chapter 1, the text uses a four-part process to analyze each type of function, starting first with the graph of the function, then the equation, the associated inequality of that equation, and ending with applications. The text covers all of the topics typically caught in a college algebra course, but with an organization that fosters students' understanding of the interrelationships among graphs, equations, and inequalities. With the Fifth Edition, the text continues to evolve as it addresses the changing needs of today's students. Included are additional components to build skills, address critical thinking, solve

applications, and apply technology to support traditional algebraic solutions, while maintaining its unique table of contents and functions-based approach. A Graphical Approach to Precalculus with Limits: A Unit Circle Approach continues to incorporate an open design, with helpful features and careful explanations of topics.

Crowned by Hate (Crowned #1)

A word was coined to describe the condition of people stricken with a new kind of fever when the Swiss-born artist Angelica Kauffman (1741-1807) came to London in 1766. 'The whole world', it was said, 'is Angelicamad.' One of the most successful women artists in history - a painter who possessed what her friend Goethe called an 'unbelievable' and 'massive' talent - Kauffman became the toast of Georgian England, captivating society with her portraits, mythological scenes and decorative compositions. She knew and painted poets, novelists and playwrights, collaborating with them and illustrating their work; her designs adorned the houses of the Grand Tourists she had met and painted in Italy; actors, statesmen, philosophers, kings and queen sat to her; and she was the force that launched a thousand engravings. Despite rumours of

relationships with other artists (including Sir Joshua Reynolds), and an apparently bigamous and annulled first marriage to a pseudo Count, Kauffman was adopted by royalty in England and abroad as a model of social and artistic decorum. A profoundly learned artist, but one who is loved, above all, for her tender adaptations from classical antiquity and sentimental literature; a commercially successful celebrity yet also a founding member of The Royal Academy of arts; the virginal creator of sexually ambivalent beings who was one of the hardest-headed businesswomen of her age, Kauffman's life and work is full of apparent contradictions explored in this first biography in over 80 years.

"A poignant expression of the durability, grace, and potential of the human spirit" set in a post-nuclear dystopia where words are worth killing for (Jean M. Auel, author of the Earth's Children series). By the late twenty-first century, civilization has nearly been destroyed by overpopulation, economic chaos, horrific disease, and a global war that brought a devastating nuclear winter. On the Oregon coast, two women—writer Mary Hope and painter Rachel Morrow—embark on an audacious project to help save future generations: the preservation of books, both their own and any they can find at nearby abandoned houses. For years, they labor in solitude. Then they encounter a young man who comes from a group of survivors in the South. They call their community the Ark. Rachel and Mary see the possibility of civilization rising again. But they realize with trepidation that the Arkites believe in only one book—the Judeo-Christian bible—and regard all other books as blasphemous. And those who go against the word of God must be cleansed from the Earth . . . In this "thought-provoking" novel of humanity, hope, and horror, M.K. Wren displays "her passionate concern with what gives life meaning (Library Journal).
