Written by a team of leading scholars, this new text focuses on a range of key challenges posed by developments in 21st century politics to provide a state-of-the-art assessment of current thinking and future directions in Political Science and International Relations.

BTU Buddy Notebook

From the most basic solutions to advanced, energy-saving projects, no book covers home insulation and weatherization like this one. Homeowners will learn how best to keep their homes warm in winter, cool in summer and weather-tight all year long.

Business Periodicals Index

The BTU Buddy Notebook is a collection of more than 50 unique service call scenarios conducted by an HVAC technician which describe real-life service scenarios related to troubleshooting. Many high quality images help to illustrate troubleshooting techniques and the equipment being serviced. There is widespread interest throughout the world in improving appliance energy efficiency. Methods to reach that end include energy labeling, energy efficiency standards and market conditioning (e.g, energy efficient procurement and DSM programs). Energy efficiency standards, which started out as an action to reduce demand for energy in individual countries, has now become a subject of regional and even worldwide dimension, particularly in the context of global climate change mitigation. Mandatory energy efficiency standards are in place for some appliances in China, Canada, Mexico, the Philippines and the United States. Standards for refrigerator/freezers will take effect in Australia and the European Union in 1999. Voluntary energy efficiency standards are in place for refrigerators in Brazil, India

and Korea and for air conditioners in India, Japan and Korea. Table I showed potential global energy use reductions from codes and standards in buildings. If individual country data can be assembled, a more accurate approach to estimating potential reductions in energy use and carbon emissions would be to perform a bottom-up analysis for energy using equipment on an end-use basis in as many large developing countries as possible. The impact of standards would be assessed as more efficient appliances replaced existing stock models and new purchases that increased saturation rates were made at higher efficiencies than would otherwise be the case. This approach would show the slow but steady buildup of annual energy savings from efficiency standards or other programs to improve energy efficiency.

When Thomas Edison began wiring New York City with a direct current electricity distribution system in the 1880s, he gave humankind the magic of electric light, heat, and power; in the process, though, he inadvertently opened a Pandora's Box of unimaginable illness and death. *Dirty Electricity* tells the story of Dr. Samuel Milham, the scientist who first alerted the world about the frightening link between occupational exposure to electromagnetic fields and human disease. Milham takes readers through his early years and education, following the twisting path that led to his discovery that most of the twentieth century diseases of civilization, including cancer, cardiovascular disease, diabetes, and suicide, are caused by electromagnetic field exposure. In the second edition, he explains how electrical exposure does its damage, and how electricity is causing our current epidemics of asthma, diabetes and obesity. Dr. Milham warns that because of the recent proliferation of radio frequency radiation from cell phones and towers, terrestrial antennas, Wi-Fi and Wi-max systems, broadband internet over power lines, and personal electronic equipment, we may be facing a looming epidemic of morbidity and mortality. In *Dirty Electricity*, he reveals the steps we must take, personally and as a society, to coexist with this marvelous but dangerous technology.

Refrigerant Charging and Service Procedures for Air Conditioning

While there are many historical examples of successful naturally ventilated buildings, standards for indoor climate have tended to emphasise active, mechanical airflow systems rather than passive natural systems. Despite its importance, knowledge about the performance of naturally ventilated buildings has remained comparatively sparse. With ten key research papers this book seeks to address this lack of information.

New York Times bestseller In their first book, the Junk Gypsies—sisters and stars of the popular Texas-born brand and HGTV show—combine big dreams, stories of roadside treasures found, and down-home design projects inspired by epic makeovers for friends like Miranda Lambert, Billie Joe Armstrong, and Sadie Robertson. Amie and Jolie Sikes, the Thelma and Louise of the design world, are the Junk Gypsies: a family with an addiction to flea markets, wanderlust, and Americana inspired design. In their world, cowgirls are heroes, road trips last forever, and junk is treasured. Beginning with a little bit of faith and a whole lot of heart and soul, the sisters travelled the back roads of America like gypsies,

Although the British consider themselves a nation of dog lovers, what we have come to know as the modern dog came into existence only after a profound, and relatively recent, transformation in that country's social attitudes and practices. In *At Home and Astray*, Philip Howell focuses on Victorian Britain, and especially London, to show how the dog's changing place in society was the subject of intense debate and depended on a fascinating combination of forces even to come about. Despite a relationship with humans going back thousands of years, the dog only became fully domesticated and installed at the heart of the middle-class home in the nineteenth century. Dog breeding and showing proliferated at that time, and dog ownership increased considerably. At the same time, the dog was increasingly policed out of public space, the "stray" becoming the unloved counterpart of the

household "pet." Howell shows how this redefinition of the dog's place illuminates our understanding of modernity and the city. He also explores the fascinating process whereby the dog's changing role was proposed, challenged, and confronted—and in the end conditionally accepted. With a supporting cast that includes Charles Dickens, Elizabeth Barrett Browning, Thomas Carlyle, and Charles Darwin, and subjects of inquiry ranging from vivisection and the policing of rabies to pet cemeteries, dog shelters, and the practice of walking the dog, *At Home and Astray* is a contribution not only to the history of animals but also to our understanding of the Victorian era and its legacies.

In this fascinating collection of postings from his popular “Musings of an Energy Nerd” blog, Green Building Advisor's Martin Holladay cuts through the hype and myths about energy efficiency, sustainability, and green building to present the very best ways to make your home more energy efficient. Martin Holladay has been making weekly postings to his “Musings of an Energy Nerd” blog on Green Building Advisor since January 2009. Along the way, he has gathered a devoted following of “energy nerds” who await his weekly musings with rapt anticipation. For the first time, the 50 most popular postings have been assembled in book form to give homeowners a great opportunity to live a more energy-efficient life in their homes. The book begins with an overview of energy priorities, and a discussion of what we mean by terms like green and sustainable. Martin presents several options for energy upgrades for an existing house (from replacing windows to adding superinsulation) before looking at ways to improve the energy efficiency of a new house. Separate chapters follow on HVAC, domestic hot water, appliances, and renewable energy, before the book wraps up with an eye-opening chapter on useless products, scams, and myths (including Martin's list of “Stupid Energy-Saving Tips”).

All of the photographs in this book were taken during the fifteen years from 1985 to the end of the twentieth century. The first decade of the new millennium seems to have passed quickly, but now when I look at these photographs I feel they are about a place different than, and distant from, the one I inhabit now. But New York, which pulsates with life twentyfourseven, is a city that seems to keep its soul intact as time moves on. Perhaps all that has changed is me; having lived in this wondrous metropolis a quarter of a century, I feel totally at home here now, which means I don't walk around with the eye of a newcomer which sees everything in awe and with a sense of wonder. The comfort I have come to feel here may have come at a price after all. But I have another kind of wonder now: what was it like

Prefabrication offers a simple path to the green home of your dreams, and in her latest book, *Prefabulous* author Sheri Koones highlights the many ways of using prefabrication to create almost-off-the-grid homes—houses that are not only environmentally friendly but often operate at nearly zero annual energy cost. Taking energy from the grid when necessary and returning any excess energy produced, almost-off-the-grid homes function on a fraction of the energy required by most houses, and additionally are more comfortable, healthier, quieter inside, and far cheaper to operate. As energy costs continue to rise, the almost-off-the-grid house proves its worth. *Prefabulous + Almost Off the Grid* profiles more than 30 of the most energy-efficient homes in the United States, and this hardworking guide reveals how homeowners can achieve similar results with floor plans, the latest, most efficient technologies, and multiple images of the exterior and interior of each home. Praise for *Prefabulous + Almost Off the Grid*: Recipient of the 2013 Robert Bruss Gold Book Award from the National Association of Real Estate Editors (NAREE) “You can build a high quality, environmentally friendly and efficient home at a reasonable price with a look and feel of a traditional home. Advancements like

those used in our house and the other houses in this book will transform the homebuilding industry.” —Christine Todd Whitman, former governor of New Jersey and administrator of the Environmental Protection Agency “The time has come to throw out the old stereotypes and to embrace prefab building techniques as the way of the future—and the best approach for today. For anyone wanting to create a house that’s sustainable in every sense of the word, this book is an excellent place to start.” —Sarah Susanka, architect and author of The Not So Big House series “I’m passionate about prefab because I know that it can spark an incredibly positive change in the building industry and dramatically reduce costs and construction duration. Prefabulous + Almost Off the Grid is an enlightening guide on using prefab to create your own affordable, energy-efficient home.” —Bruce Ratner, chairman and chief executive of the Forest City Ratner Companies “Sheri Koones highlights the many ways of using prefabrication to create almost-off-the-grid homes that are not only environmentally friendly but often operate at nearly zero annual energy cost. . . . This is an easy-on-the-eyes guide that includes floor plans and multiple images of the exterior and interior of each home. It is not a manual for green construction, but a general overview of aspects of prefab and green construction. And it does that well.” —Natural Life magazine “If you’re ready to do something about your energy dependence, or if you enjoy stories of people who’ve bucked the trends, you owe it to yourself to give Prefabulous + Almost Off the Grid a look. Beautifully illustrated, it ends with a great resources list for the homes showcased.” —Examiner.com “Indispensable guide to creating the ideal,
