The quality and quantity of permanent sample plot (PSP) data retained by forestry agencies and companies warranted a serious effort to organize and incorporate it into a computerized database management system. The Microcomputer PSP Catalogue (MPC) system facilitates the storage and retrieval of data pertaining to individual permanent sample plots archived by the Canadian Forestry Service and other forestry agencies. The system includes data on geographical location, administrative information, type of information, site attributes, stand conditions, dates of establishment and remeasurement, treatment types and dates of application, reference material on related publications, and comments related to measurement methods, quality control, etc. This manual describes the system setup, start-up, the main menu, and the database contents and standard codes.
