This book focuses on participatory capacity-building in ways that address the practical needs and strategic interests of the disadvantaged and disempowered - it examines how differences in class, ethnicity, race, caste, religion, age and gender lead to the 'politics of exclusion'. It offers innovative, accessible tools to enable facilitators from both inside and outside communities to empower those who are frequently omitted from decision-making processes. The style and approach are interactive, stimulating reflection and involvement by all parties. Power, Process and Participation aims to enable facilitators from inside and outside communities to involve and empower those commonly excluded in decision making processes. It provides a balanced overview of how 'participation' has been used in this context and raises the questions that all those involved in this type of activity should ask themselves. There are three distinct sections: Part 1: Definitions, history and issues - which provides an overview of some of the broad issues underlying the themes addressed in this book. A useful brief history is given of well known participatory methodologies and key questions are asked on the use and misuse of 'participation': whose ends does it serve, who is involved and what are the power relations, appropriate time frames and scale and how should it proceed in order to best serve the interests of the people involved? Part 2: Methods and ethics in our research and our use of the media - Whose expertise counts? How is it acknowledged? These are explored in the context of contributors' experience of undertaking research with women in Zimbabwe. Questions of ownership and consent as well as other issues are discussed further in the context of the use of video in participatory communication. Part 3: Tools for environmental and social change - The longest section in the book gives 35 tools and how to use them in facilitating participation. An introductory session explains how to use the section. Tools are cross referenced and for each the purpose, materials, process and estimated time is provided. For a number of the tools, examples of how they have been used in practice are included. Power, Process and Participation describes itself as a manual and although it does not immediately look like one, it is readable, logically arranged and combines instructions on how tools can be used with examples of how they have been used in practice. There are notes on how to use the book and how to choose from the tools offered. This book would be useful to anyone looking for both an overview of participation and how it can be used and misused; and guidance on facilitating the process.

Although effective fire sprinkler systems are crucial to public safety, for years, the designers of those systems had few published resources to reference and guide them through their design processes. The first edition of this book changed all that, and now The Design and Layout of Fire Sprinkler Systems Second Edition suits their needs even better. Written and thoroughly updated by a fire prevention engineer with more than 20 years of experience, this book provides a complete, systematic introduction to automatic fire sprinkler design and layout, from design basics, code requirements, and pipe hanging to hydraulic calculations, retrofits, and details on fire pumps. The author carefully outlines all of a designer's responsibilities and includes an entire chapter dedicated to preparing for the NICET exam. More than 150 sample diagrams, checklists, sample forms, spec sheets, photographs, and a glossary complement the text, and the larger page size of this edition permits clear presentation of diagrams and schematics. The Design and Layout of Fire Sprinkler Systems not only builds the foundation and skills of newcomers to the field, but also provides an outstanding reference for fire safety professionals, building inspectors, insurance underwriters, and municipal officials.

The State Fire Marshal's test is administered through PSI. All tests consist of questions that require true-false or multiple choice answers. The technical test questions are based on NFPA 10. We create these self-practice test questions referencing the principles and concepts currently valid in the Fire Extinguisher trade. They are for reinforcing learning, NOT for simulating "real" questions. Each question comes with an answer and a short explanation which aids you in seeking further study information. For purpose of exam readiness drilling, this product includes questions that have varying numbers of choices. Some have 2 while some have 5 or 6. We want to make sure these questions are tough enough to really test your readiness and draw your focus to the weak areas. You should use this product together with other study

resources for the best possible exam prep coverage.

Most librarians know the importance of disaster preparedness. Many disasters could have been prevented altogether or have had reduced impact if institutions had been better prepared. This resource guide suggests how disaster preparedness can be achieved at cultural institutions. Twenty-three basic resource articles are presented to introduce disaster preparedness. They deal with the safety of collections rather than the safety of staff, and related issues such as security and environmental control are not addressed. Of the materials that cover what to do once a disaster has occurred, most emphasize water damage because so many causes of disaster result in water damage. The resource guide is supplemented by a list of 23 selected readings. When a choice had to be made between a readily available source and one that was difficult to obtain, the hard-to-obtain one was included in the resource guide, and a reference to the other was provided in the bibliography. The basic processes for disaster preparedness include: (1) brainstorming potential disasters; (2) investigating responses to past disasters; (3) outlining a disaster plan; (4) determining remaining needs; and (5) developing recommendations. (SLD)
