Bitter Creek Wilderness Environmental Impact Statement

“Revelatory . . . With every chapter, you get a history lesson, a hunting lesson, a nature lesson and a cooking lesson. . . . Meat Eater offers an overabundance to savor.”—The New York Times Book Review Steven Rinella grew up in Twin Lake, Michigan, the son of a hunter who taught his three sons to love the natural world the way he did. As a child, Rinella devoured stories of the American wilderness, especially the exploits of his hero, Daniel Boone. He began fishing at the age of three and shot

his first squirrel at eight and his first deer at thirteen. He chose the colleges he went to by their proximity to good hunting ground, and he experimented with living solely off wild meat. As an adult, he feeds his family from the food he hunts. Meat Eater chronicles Rinella's lifelong relationship with nature and hunting through the lens of ten hunts, beginning when he was an aspiring mountain man at age ten and ending as a thirty-seven-year-old Brooklyn father who hunts in the remotest corners of North America. He tells of having a struggling career as a fur trapper just as fur prices were falling; of a dalliance with catch-and-release steelhead fishing; of canoeing in the Missouri Breaks in search of mule deer just as the Missouri River was freezing up one November; and of hunting the elusive Dall sheep in the glaciated mountains of Alaska. Through each story, Rinella grapples with themes such as the role of the hunter in shaping America, the vanishing frontier, the ethics of killing, the allure of hunting trophies, the responsibilities that human predators have to their prey, and the disappearance of the hunter himself as Americans lose their connection with the way their food finds its way to their tables. Hunting, he argues, is intimately connected with our humanity; assuming responsibility for acquiring the meat that we eat, rather than entrusting it to proxy executioners, processors, packagers, and distributors, is one of the most respectful and exhilarating things a meat eater can do. A thrilling storyteller with boundless interesting facts and historical information about the land, the natural world, and the history of hunting, Rinella also includes after each chapter a section of "Tasting Notes" that draws from his thirty-plus years of eating

and cooking wild game, both at home and over a campfire. In *Meat Eater* he paints a loving portrait of a way of life that is part of who we are as humans and as Americans. Praise for *Meat Eater* “Full of empathy and intelligence . . . In some sections of the book, the author’s prose is so engrossing, so riveting, that it matches, punch for punch, the best sports writing.”—*The Wall Street Journal* “Steven Rinella is one of the best nature writers of the last decade. . . . This book was a page-turner.”—Tim Ferris “Rinella’s writing is unerringly smart, direct, and sharply detailed.”—*The Boston Globe* “A unique and valuable alternate view of where our food comes from.”—Anthony Bourdain

Hacklebarney and Voorhees State Parks recounts the history of two beautiful natural sanctuaries at the southwestern end of New Jersey’s Highlands. Managed as a single unit by the state park service, the two parks are Hacklebarney, 977 acres along the Black River corridor, and Voorhees, 640 acres of gently rolling farmland. Their stories are similar: both parks were created in the 1920s on privately donated land and were developed by the federally operated Civilian Conservation Corps. With more than two hundred unique photographs, many published here

Fishing the New Jersey Coast

This report provides a detailed snapshot of our nation's passion for wildlife and nature. It serves as a road map to guide efforts to reach more Americans to provide them with opportunities to hunt, fish, and enjoy America's wildlife and wild places. Bird/wildlife watching, hunting, fishing are not just favorite pastimes, but they share revenues from sale of licenses and tags, as well as excise taxes paid by hunters, anglers, and shooters to continue to support vital wildlife and habitat conservation efforts in every state. The report outlines the details for compilation of information and surveys to different populations and provides highlights along with statistical information represented in tables from the data collected. Sport Fish of New Jersey

The North American model of wildlife conservation is unique, and it has restored wildlife abundance to an entire continent. While courts defined a public-trust relationship with fish and wildlife, sport hunters developed a philosophy and initiated programs that resurrected waterfowl, upland birds, and big game from the ashes of commercial exploitation and habitat desecration. Today, against all odds, we enjoy a wildlife abundance that is the envy of the world. Rifle in Hand traces the evolution of our society's relationship with the animals that share this continent. It introduces the reader to a few of the heroes who made it all happen, people who, while passing through history, left a conservation legacy and hunting heritage for all to enjoy, including Theodore Roosevelt, D'ing Darling, Aldo Leopold and others.

At the end of the nineteenth century, North America suffered a catastrophic loss of wildlife driven by unbridled resource extraction, market hunting, and

unrelenting subsistence killing. This crisis led powerful political forces in the United States and Canada to collaborate in the hopes of reversing the process, not merely halting the extinctions but returning wildlife to abundance. While there was great understanding of how to manage wildlife in Europe, where wildlife management was an old, mature profession, Continental methods depended on social values often unacceptable to North Americans. Even Canada, a loyal colony of England, abandoned wildlife management as practiced in the mother country and joined forces with like-minded Americans to develop a revolutionary system of wildlife conservation. In time, and surviving the close scrutiny and hard ongoing debate of open, democratic societies, this series of conservation practices became known as the North American Model of Wildlife Conservation. In this book, editors Shane P. Mahoney and Valerius Geist, both leading authorities on the North American Model, bring together their expert colleagues to provide a comprehensive overview of the origins, achievements, and shortcomings of this highly successful conservation approach. This volume • reviews the emergence of conservation in late nineteenth–early twentieth century North America • provides detailed explorations of the Model's institutions, principles, laws, and policies • places the Model within ecological, cultural, and socioeconomic contexts • describes the many economic, social, and cultural benefits of wildlife restoration and management • addresses the Model's challenges and limitations while pointing to emerging opportunities for increasing inclusivity and optimizing implementation

Written for wildlife professionals, researchers, and students, this book explores the factors that helped fashion an enduring conservation system, one that has not only rescued, recovered, and sustainably utilized wildlife for over a century, but that has also advanced a significant economic driver and a greater scientific understanding of wildlife ecology. Hacklebarney and Voorhees State Parks

When Lily Raff McCaulou traded in an indie film production career in New York for a reporting job in central Oregon, she never imagined that she'd find herself picking up a gun and learning to hunt. She'd been raised as a gun-fearing environmentalist and an animal lover, and though a meat-eater, she'd always abided by the principle that harming animals is wrong. But Raff McCaulou's perspective shifted when she began spending weekends fly-fishing and weekdays interviewing hunters for her articles, realizing that many of them were more thoughtful about animals and the environment than she was. So she embarked upon the project of learning to hunt from square one. From attending a Hunter Safety course designed for children to field dressing an elk

and serving it for dinner, she explores the sport of hunting and all it entails, and tackles the big questions surrounding one of the most misunderstood American practices and pastimes. Not just a personal memoir, this book also explores the role of the hunter in the twenty-first century, the tension (at times artificial) between hunters and environmentalists, and new models of sustainable and ethical food procurement.

Betsy Andrews's sweeping, energetic, book-length poem pounds the pavement of the New Jersey Turnpike, driving through America—past landfills and wetlands and weapons labs—under the towering shadows of engines, oil, and war. With a disarmingly unique voice that evokes the tradition of Pound and Eliot, Whitman and Williams and Ginsberg, Andrews creates a pastiche of landscape, consciousness, history, and politics in this American age.

Join Delawarean Steven Kendus as he uses his hunting wisdom, experience, and research to preserve Delaware's hunting legacy by sharing important history, tactics, locations, tips, and tricks associated with Delaware hunting.

ONE OF THE NEW YORK TIMES BOOK REVIEW'S 10 BEST BOOKS OF THE YEAR A major book about the future of the world, blending intellectual and natural history and field reporting into a powerful account of the mass extinction unfolding before our eyes Over the last half a billion years, there have been five mass extinctions, when the diversity of life on earth suddenly and dramatically contracted. Scientists around the world are currently monitoring the sixth extinction, predicted to be the most devastating extinction event since the asteroid impact that wiped out the dinosaurs. This time around, the cataclysm is us. In *The Sixth Extinction*, two-time winner of the National Magazine Award and *New Yorker* writer Elizabeth Kolbert draws on the work of scores of researchers in half a dozen disciplines, accompanying many of them into the field: geologists who study deep ocean cores, botanists who follow the tree line

as it climbs up the Andes, marine biologists who dive off the Great Barrier Reef. She introduces us to a dozen species, some already gone, others facing extinction, including the Panamanian golden frog, staghorn coral, the great auk, and the Sumatran rhino. Through these stories, Kolbert provides a moving account of the disappearances occurring all around us and traces the evolution of extinction as concept, from its first articulation by Georges Cuvier in revolutionary Paris up through the present day. The sixth extinction is likely to be mankind's most lasting legacy; as Kolbert observes, it compels us to rethink the fundamental question of what it means to be human.
