### Links Between Air Quality and Economic Growth

A former Senior VP of Apple shares how Steve Jobs motivated people to do the best work of their lives Jay Elliot was hired personally by Steve Jobs, just in time to accompany him on the last of his historic visits to Xerox's Palo Alto Research Center, the visits that changed the course of computing. As Senior VP of Apple, Jay served as Steve's right-handman and troubleshooter, overseeing all corporate operations and business planning, as well as software development and HR. In Leading Apple with Steve Jobs, Jay details how Steve managed and motivated his people—and what every manager can learn from Jobs about motivating people to do the best work of their lives. Steve Jobs used the phrase "Pirates! Not the Navy" as a rallying cry—a metaphor to "Think Different." In the days of developing the Macintosh, it became a four-word mission statement. It expresses the heart of Apple and Steve. The management principles that grew out of that statement form the backbone of this book. Explains how to find talented people who will understand your objectives and be able to make a contribution to that effort Lists traits that can determine whether a person will be so committed to the vision that they will provide their own motivation Explains how to ensure that your employees hold an allegiance to the captain and to his/her shipmates, and also possess the ability to come up with original, unique ways to approach a problem, and be self-guided with a strong sense of direction Leading Apple with Steve Jobs will shift your thought paradigm and inspire you to assemble and lead innovative teams.

In business today, all advantage is temporary. In order to survive-let alone thrive-companies must be able to anticipate and adapt to change, or face rapid, brutal extinction. In *Clock speed*, Charles Fine draws on a decades worth of research at M.I.T.'s Sloan School of Management to introduce a new vocabulary for understanding the forces of competition and making strategic decisions that will determine the destiny of your company, as well as your industry. Taking inspiration from the world of biology, Fine argues that each industry has its own evolutionary life cycle (or "clock speed"), measured by the rate at which it introduces new products, processes, and organizational structures. Just as geneticists study the fruit fly to gain insight into the evolutionary paths of all animals, managers in any industry can learn from the industrial fruit flies-such as Internet services, personal computers, and multimedia entertainment-which evolve through new generations at breakneck speed. Applying the lessons of the fruit flies to industries as diverse as bicycles, pharmaceuticals, and semiconductors, Fine illustrates how competitive advantage is lost or gained by how well a company manages dynamic web of relationships that run throughout its chain of suppliers, distributors, and alliance partners. Packed with revolutionary concepts and tools to help managers make key strategic decisions that affect current and future performance, *Clock speed* shows, as no other book before it, how the ultimate core competency is mastering the art of supply chain design, carefully choosing which components and capabilities to keep in-house and which to purchase from outside.

### **Storytelling at Work**

Quoth the Raven, ""Nevermore."" ""The Raven"" is a classic narrative poem by American writer Edgar Allan Poe. First published in January 1845, the poem is often noted for its musicality, stylized language, and supernatural atmosphere. It tells of a talking raven's mysterious visit to a distraught lover, tracing the man's slow fall into madness. The lover, often identified as being a student, is lamenting the loss of his love, Lenore. Sitting on a bust of Pallas, the raven seems to further instigate his distress with its constant repetition of the word ""Nevermore."" The poem makes use of a number of folk, mythological, religious, and classical references. Poe claimed to have written the poem very logically and methodically, intending to create a poem that would appeal to both critical and popular tastes, as he explained in his 1846 follow-up essay, ""The Philosophy of Composition."" The poem was inspired in part by a talking raven in the novel Barnaby Rudge: A Tale of the Riots of 'Eighty by Dickens.

Anke Hanft and Michaela Knust The present study examines and compares the structure and organisation of continuing higher education in six countries: Austria, Finland, France, Germany, the UK and the USA. The focus is not just on current continuing education provisions at higher education institutions but also on the institutions themselves and their surrounding milieu. The study also attempts to move away from a purely national angle and to approach the topic from an international perspective. The conclusion is reached that when it comes to the development, establishment and professional implementation of continuing education provisions, German higher education institutions lag behind the other countries in the comparison in almost all areas. The main findings in terms of the three levels 'system', 'institution', and 'programme' are summarised below.

### 1 Continuing Education in the Higher Education System

There are considerable divergences, both nationally and internationally, in the definition of the German term "wissenschaftliche Weiterbildung" ("academic continuing education"). In the English-speaking world, a variety of terms such as "lifelong learning", "adult education", "continuing education", "continuing higher education", "university-level continuing education" or "continuing professional development" are often used as synonyms without any precise differentiation - and this is not perceived as a problem.

Most hardware and software companies experience cycles of success and failure, that pattern is certainly not a compelling publishing topic. When you add in the name of Apple Computer, the picture changes from ho-hum to humdinger though. Right now, Apple's shares have surged to a 4-year high, and along with the runaway success of Apple's iPod (10 million iPods sold as of Dec 2004, and 2 million+ units sold in the last 3 months alone), Apple stock seems poised to only increase in value. There's a "halo" effect beginning to take hold - simple put, consumers and business people alike are so impressed with iPod's technology and success that they're taking a second look at other Apple products and in particular Macintosh computers. If the current trends continue, Apple will have sparked yet another revolution in the personal computer arena, and will regain ground many thought was lost for good. Strong customer-focused companies have a clear, relevant promise which they obsessively deliver day-in, day-out. At the same time, they relentlessly drive the market by evolving the offer in the face of market developments and opportunities. Because they meet customer needs better than the competition, again and again, they are able to generate sustainable, profitable, market-leading organic growth. The problem the book addresses is how to achieve this. The authors identify five key steps using their framework for success: Offer a clear, relevant customer promise Build customer trust by reliably delivering that promise Continuously improve the promise, while still reliably delivering it Drive the market by innovating beyond the familiar Support all this with an open organization that promotes frank discussion based on clear facts and market feedback. Above all the book runs counter to the fashionable claim that the starting-point for business success should be to find a 'blue-sky', 'out-of-the-box' breakthrough innovation. Barwise and Meehan use many compelling cases to

illustrate how managers can find ways within their existing network and organization to achieve long term growth.

Behind the bitter rivalry between Apple and Google—and how it's reshaping the way we think about technology The rise of smartphones and tablets has altered the industry of making computers. At the center of this change are Apple and Google, two companies whose philosophies, leaders, and commercial acumen have steamrolled the competition. In the age of Android and the iPad, these corporations are locked in a feud that will play out not just in the mobile marketplace but in the courts and on screens around the world. Fred Vogelstein has reported on this rivalry for more than a decade and has rare access to its major players. In *Dogfight*, he takes us into the offices and board rooms where company dogma translates into ruthless business; behind outsize personalities like Steve Jobs, Apple's now-lionized CEO, and Eric Schmidt, Google's executive chairman; and inside the deals, lawsuits, and allegations that mold the way we communicate. Apple and Google are poaching each other's employees. They bid up the price of each other's acquisitions for spite, and they forge alliances with major players like Facebook and Microsoft in pursuit of market dominance. *Dogfight* reads like a novel: vivid nonfiction with never-before-heard details. This is more than a story about what devices will replace our cell phones and laptops. It's about who will control the content on those devices and where that content will come from—about the future of media and the Internet in Silicon Valley, New York, and Hollywood.

Storytelling at Work is a groundbreaking book about the power of personal storytelling to spark insight, meaning, and innovation - especially in the modern day workplace where data and information have too often supplanted knowledge and

wisdom. The author of the book, Mitch Ditkoff, has been an "innovation provocateur" to some of the world's most forward thinking organizations since 1987 and has come to realize that the single most effective way to jump start wisdom in the workplace is via the sharing of well told stories - first person "moments of truth" that have embedded within them the DNA of what it really takes to be a positive force for change, on or off the job. Part One of Storytelling at Work includes 37 of the author's own stories from the front lines of business, both as the Co-Founder of Idea Champions - a leading innovation consultancy - and earlier in his life, as a young entrepreneur trying to find his way in the world. The stories are entertaining, evocative, and mind opening. Each one is followed by a brief reflection - a simple way for readers to apply the message of the story to their own lives. Part Two of the book is a collection of 16 essays on the art and science of storytelling, a thought provoking exploration of why stories are such a powerful communication medium and how the reader can make best use of stories to have the most possible positive impact on others. "I truly LOVE this book Mitch Ditkoff has delivered a modern classic on how to communicate with wisdom. Kudos " --Rowan Gibson, author of The Four Lenses of Innovation "Storytelling at Work is filled with Eureka moments that will spark your creativity and ignite your motivation. Original and deeply insightful " --Marshall Goldsmith, author of Triggers, a New York Times and Wall Street Journal #1 bestseller "Mitch Ditkoff's powerfully written book shows us how storytelling, well done, humanizes the world of work and helps us tune into the deep well of timeless wisdom within." --Tim Gallwey, author of The Inner Game of Tennis
