The Girl From the Golden Horn

This book was compiled from contributions given at the 7th IAA Symposium on Small Satellites for Earth Observation, May 4–8, 2009, Berlin (IAA – International Academy of Astronautics). From the 15 sessions for oral presentations and two poster sessions, 52 contributions were selected which are representative for the new developments and trends in the area of small satellites for Earth observation. They re ect the potentials of a diversity of missions and related technologies. This may be based on national projects or international co-operations, single satellites of constellations, pico-, nano-, micro- or mini-satellites, developed by companies, research institutions or agencies. The main focus is on new missions to monitor our Earth's resources (Part I), and the environment in which our Earth is emb- ded (Part II). Part III deals with distributed space systems, a unique feature of small satellites and in most cases impractical to do with large satellites. Here we concentrate on constellations of satellites with focus on future missions relying on co-operating satellites. For all the new developments and projects we need well e- cated specialists coming from the universities. Many universities included already the development and implementation of small satellites in their curriculum. The u- versity satellites chapter (Part IV) shows the high quality which is already reached by some of the universities worldwide.

This book provides an introduction to the use of unmanned aerial vehicles (UAVs) for the geographic observation and spatial analysis of urban areas. The velocity of urban change necessitates observation platforms that not only enhance situational awareness for planning and allied analytical efforts, but also provide the ability to rapidly and inexpensively collect data and monitor change. UAVs can accomplish both of these tasks, but their use in urban environments is loaded with social, operational, regulatory and technical challenges that must be addressed for successful deployments. The book provides a resource for educators and students who work with geographic information and are seeking to enhance

these data with the use of unmanned aerial vehicles. Topics covered include, 1) a primer on UAVs and the many different ways they can be used for geographic observation, 2) a detailed overview on the use of aviation maps and charts for operating UAVs in complex urban airspace, 3) techniques for integrating UAV-derived data with more traditional geographic information, 4) application of spatial analytical tools for urban and environmental planning, and 5) an exploration of privacy and public safety issues associated with UAV operation.

This is the first book to provide a systematic treatment of the economics of antitrust (or competition policy) in a global context. It draws on the literature of industrial organisation and on original analyses to deal with such important issues as cartels, joint-ventures, mergers, vertical contracts, predatory pricing, exclusionary practices, and price discrimination, and to formulate policy implications on these issues. The interaction between theory and practice is one of the main features of the book, which contains frequent references to competition policy cases and a few fully developed case studies. The treatment is written to appeal to practitioners and students, to lawyers and economists. It is not only a textbook in economics for first year graduate or advanced undergraduate courses, but also a book for all those who wish to understand competition issues in a clear and rigorous way. Exercises and some solved problems are provided.

No institution is as critically important to America's security. No American institution is as controversial. And, after the White House, Congress, and the Supreme Court, no institution is as powerful. Yet until now, no book has presented the full story of the FBI from its beginnings in 1908 to the present The Bureau The Secret History of the FBI Based on exclusive interviews-including the first interview with Robert Mueller since his nomination as director-The Bureau reveals why the FBI was unprepared for the attacks of September 11 and how the FBI is combating terrorism today. The book answers such questions as: Why did the FBI know nothing useful about al-Qaeda before September 11? What is really behind the FBI's more aggressive investigative approaches that have raised civil liberties concerns? What does the FBI think of improvements in airline security? How safe does the FBI think America really is? An Award-winning investigative reporter and New York Times bestselling author of Inside the White House, Ronald Kessler answers these questions and presents the definitive history of the Federal Bureau of Investigation. The Bureau reveals startling new information-from J. Edgar Hoover's blackmailing of Congress to the investigation of the September 11th attacks.

The extraordinary saga of the mysterious life of Kurban Said was told in amazing detail in a recent New Yorker article. One of the most beguiling mysteries it uncovered was the existence of another magical novel—The Girl From the Golden Horn. It is being published in English now for the first time. It is 1928 and Asiadeh Anbara and her father, members of the Turkish royal court, find themselves in exile in Berlin after the collapse of the Ottoman Empire. Years ago she had been promised to a Turkish prince but now, under the spell of the West, the nineteen-year-old Muslim girl falls in love and marries a Viennese doctor, an "unbeliever." But when she again meets the prince—now a screenwriter living in exile in New York—and he decide he wants her as his wife, she is torn between the marriage she made in good faith and her promised duty made long ago. The Girl From the Golden Horn is a novel of the clash of cultures and values—of prewar Istanbul and decadent postwar Berlin. And, of course, Muslims and Christians. But it is also about the clash within Asiadeh herself, and the tension between duty and desire.

The Internationalisation of Business R&D

What's the secret to a company's continued growth and prosperity? Internationally known marketing

expert Al Ries has the answer: focus. His commonsense approach to business management is founded on the premise that long-lasting success depends on focusing on core products and eschewing the temptation to diversify into unrelated enterprises. Using real-world examples, Ries shows that in industry after industry, it is the companies that resist diversification, and focus instead on owning a category in consumers' minds, that dominate their markets. He offers solid guidance on how to get focused and how to stay focused, laying out a workable blueprint for any company's evolution that will increase market share and shareholder value while ensuring future success.

Understanding the Digital Economy

The rapid growth of electronic commerce, along with changes in information, computing, and communications, is having a profound effect on the United States economy. President Clinton recently directed the National Economic Council, in consultation with executive branch agencies, to analyze the economic implications of the Internet and electronic commerce domestically and internationally, and to consider new types of data collection and research that could be undertaken by public and private organizations. This book contains work presented at a conference held by executive branch agencies in May 1999 at the Department of Commerce. The goals of the conference were to assess current research on the digital economy, to engage the private sector in developing the research that informs investment and policy decisions, and to promote better understanding of the growth and socioeconomic implications of information technology and electronic commerce. Aspects of the digital economy addressed include macroeconomic assessment, organizational change, small business, access, market structure and competition, and employment and the workforce.

By the dawn of the new millennium, robotics has undergone a major transformation in scope and dimensions. This expansion has been brought about by the maturity of the field and the advances in its related technologies. From a largely dominant industrial focus, robotics has been rapidly expanding into the challenges of the human world. The new generation of robots is expected to safely and dependably co-habitat with humans in homes, workplaces, and communities, providing support in services, entertainment, education, healthcare, manufacturing, and assistance. Beyond its impact on physical robots, the body of knowledge robotics has produced is revealing a much wider range of applications reaching across diverse research areas and scientific disciplines, such as: biomechanics, haptics, neurosciences, virtual simulation, animation, surgery, and sensor networks among others. In return, the challenges of the new emerging areas are proving an abundant source of stimulation and insights for the field of robotics. It is indeed at the intersection of disciplines that the most striking advances happen. The goal of the series of Springer

Tracts in Advanced Robotics (STAR) is to bring, in a timely fashion, the latest advances and developments in robotics on the basis of their significance and quality. It is our hope that the wider dissemination of research developments will stimulate more exchanges and collaborations among the research community and contribute to further advancement of this rapidly growing field.

The DARPA Urban Challenge

It has become clear that over the past few decades enterprises not only produce and sell abroad but increasingly also develop goods and services outside their home countries; a development now known as the internationalisation of business R and D. This book presents a comprehensive picture of the current state of internationalisation of R and D in the business sector. The contributors explore key patterns of the internationalisation of R and D across various countries and sectors using case studies to underpin empirical evidence. They examine the drivers of the process, revealing the impacts of R and D internationalisation on both home and host countries

using both qualitative and quantitative analysis. Topics discussed include: * Why firms locate R and D activities abroad * Data availability, quality and comparability * The role of the EU and the US in the internationalisation of R and D * Country-level factors such as size, workforce and FDI as determinants of R and D internationalisation * Impacts of R and D internationalisation on home and host countries. This book will prove an insightful read for academics, researchers and students with an interest in economics - particularly the economics of innovation - business and management, and science and technology. It will also prove a valuable resource for R and D policymakers and public administrators.
