Foreign exchange intervention is widely used as a policy tool, particularly in emerging markets, but many facets of this tool remain limited, especially in the context of flexible exchange rate regimes. The Latin American experience can be informative because some of its largest countries adopted floating exchange rate regimes and inflation targeting while continuing to intervene in foreign exchange markets. This edited volume reviews detailed accounts from several Latin American countries' central banks, and it provides insight into how and with what aim many interventions were decided and implemented. This book documents the effectiveness of intervention and pays special attention to the role of foreign exchange intervention policy within inflation-targeting monetary frameworks. The main lesson from Latin America's foreign exchange interventions, in the context of inflation targeting, is that the region has had a considerable degree of success. Transparency and a clear communication policy have been key. For

economies that are not highly dollarized, rules-based intervention helped contain financial instability and build international reserves while preserving inflation targets. The Latin American experience can help other countries in the design and implementation of their policies.

The Small Business Innovation Research (SBIR) program is one of the largest examples of U.S. public-private partnerships, and was established in 1982 to encourage small businesses to develop new processes and products and to provide quality research in support of the U.S. government's many missions. The U.S. Congress tasked the National Research Council with undertaking a comprehensive study of how the SBIR program has stimulated technological innovation and used small businesses to meet federal research and development needs, and with recommending further improvements to the program. In the first round of this study, an ad hoc committee prepared a series of reports from 2004 to 2009 on the SBIR program at the five agencies responsible for 96 percent of the program's operations-including NASA. In a follow-up to the first round, NASA requested from the Academies an assessment focused on operational questions in order to identify further improvements to the program. Public-private partnerships like SBIR are particularly important since today's knowledge economy is driven in large part by the nation's capacity to innovate. One of the defining features of the U.S. economy is a high

level of entrepreneurial activity. Entrepreneurs in the United States see opportunities and are willing and able to assume risk to bring new welfare-enhancing, wealth-generating technologies to the market. Yet, although discoveries in various fields present new opportunities, converting these discoveries into innovations for the market involves substantial challenges. The American capacity for innovation can be strengthened by addressing the challenges faced by entrepreneurs.

Ways in which school leaders can establish "safe schools" are detailed in this guide book. It offers suggestions on how to involve students, parents, law enforcement officials, business and community leaders, and other concerned citizens. This resource guide is designed to help administrators accomplish five goals: (1) assess the school climate by identifying top safety issues; (2) determine safe-school goals; (3) develop a plan for reaching safe-school goals; (4) build a support network for policy development and plan implementation; and (5) maintain a system of continuing evaluation. The guide reviews factors that affect school safety and suggests getting started by creating a planning team. A special section addresses how to conduct a school-site assessment, focusing on what to do before the assessment begins; how to gather pertinent data; how to track and monitor school crime; and how to make campuses safer through good environmental design and sensible management and maintenance. The guide suggests

that the law is at the heart of safe-school planning, and it defines the guiding parameters of what must be done. Two appendices provide model assessment questionnaires and list sample plans, policies, procedures, and codes. (RJM)

This book explores how young children and new families are located in the consumer world of affluent societies. The author assesses the way in which the value of infants and monetary value in markets are realized together, and examines how the meanings of childhood are enacted in the practices, narratives and materialities of contemporary markets. These meanings formulate what is important in the care of young children, creating moralities that impact not only on new parents, but also circumscribe the possibilities for monetary value creation. Three main understandings of early childhood - those of love, protection and purification - and their interrelationships are covered, and illustrated with examples including food, feeding tools, nappies, travel systems and toys. The book concludes by re-examining the relationship between adulthood and the cultural value of young children, and by discussing the implications of the ways markets address young children, also examines the realities of older children in consumer culture. Childhood and Markets will be of interest to students and scholars of sociology, childhood studies, anthropology, cultural studies, media studies, business studies and

China's spectacular rise challenges established economic moulds, both at the national level, with the concept of "state capitalism", and at the firm level, with the notion of indigenous "Chinese management practices". However, both Chinese and Western observers emphasise the transitional nature of the reforms, thereby leaving open the question as to whether China's reform process is really a fast catch-up process, with ultimate convergence to global standards, or something different. This book, by a leading economist and sinologist, argues that "culture" is an exceptionally useful tool to help understand fully the current picture of the Chinese economy. Drawing on a range of disciplines including

Today, space has become a seamless part of many military and civilian activities. The advantages the United States holds in space capabilities will drive some nations to improve their abilities to access and operate in space. Moreover, some actors will seek counterspace capabilities that target the perceived United States and allied reliance on space, including the ability to use secure satellite communications, precision strike capabilities, and ISR assets. As the number of spacefaring nations grows and as some actors integrate space and counterspace capabilities into military operations, these trends will pose a challenge to U.S. space dominance and present new risks for assets on orbit.

Cellulose is destined to play a major role in the emerging bioeconomy. Awareness of the environment and a depletion of fossil fuels are some of the driving forces for looking at forest biomaterials for an alternative source of energy, chemicals and materials. The importance of cellulose is widely recognized world-wide and as such the field of cellulose science is expanding exponentially. Cellulose, the most abundant biopolymer on earth, has unique properties which makes it an ideal starting point for transforming it into useful materials. To achieve this, a solid

Professionalism is arguably more important in some occupations than in others. It is vital in some because of the life and death decisions that must be made, for example in medicine. In others the rapidly changing nature of the occupation makes efficient regulation difficult and so the professional behaviour of the practitioners is central to the good functioning of that

Across the world, universities are more numerous than they have ever been, yet at the same time there is unprecedented confusion about their purpose and scepticism about their value. *What Are Universities For?* offers a spirited and compelling argument for completely rethinking the way we see our universities, and why we need them. Stefan Collini

challenges the common claim that universities need to show that they help to make money in order to justify getting more money. Instead, he argues that we must reflect on the different types of institution and the distinctive roles they play. In particular we must recognize that attempting to extend human understanding, which is at the heart of disciplined intellectual enquiry, can never be wholly harnessed to immediate social purposes - particularly in the case of the humanities, which both attract and puzzle many people and are therefore the most difficult subjects to justify. At a time when the future of higher education lies in the balance, *What Are Universities For?* offers all of us a better, deeper and more enlightened understanding of why universities matter, to everyone.

Urban water and wastewater systems have an inherent vulnerability to both manmade and natural threats and disasters including droughts, earthquakes and terrorist attacks. It is well established that natural disasters including major storms, such as hurricanes and flooding, can effect water supply security and integrity. Earthquakes and terrorist attacks have many characteristics in common because they are almost impossible to predict and can cause major devastation and confusion. Terrorism is also a major threat to water security and recent attention has turned to the potential that these attacks have for disrupting urban water supplies. There is a need to introduce the related concept of Integrated Water

Resources Management which emphasizes linkages between land-use change and hydrological systems, between ecosystems and human health, and between political and scientific aspects of water management. An expanded water security agenda should include a conceptual focus on vulnerability, risk, and resilience; an emphasis on threats, shocks, and tipping points; and a related emphasis on adaptive management given limited predictability. Internationally, concerns about water have often taken a different focus and there is also a growing awareness, including in the US, that water security should include issues related to quantity, climate change, and biodiversity impacts, in addition to terrorism. This presents contributions from a group of internationally recognized experts that attempt to address the four areas listed above and includes suggestions as to how to deal with related problems. It also addresses the new and potentially growing issue of cyber attacks against water and waste water infrastructure including descriptions of actual attacks, making it of interest to scholars and policy-makers concerned with protecting the water supply.

This publication contains a presentation of case laws rendered in jurisdictions having enacted the UNCITRAL Model Law on International Commercial Arbitration. In light of the large number of cases collected, the Commission requested a tool specifically designed to present selected information on the interpretation and application of the Model Law in a clear, concise and objective manner. This request originated the UNCITRAL Digest of Case Law on the UNCITRAL Model Law on International Commercial Arbitration. The purpose of the digest is to assist in the dissemination of information on the Model Law and further promote its adoption as well as its uniform interpretation and application. In addition, the digest is meant to help judges, government officials, arbitrators, practitioners and academics use more efficiently the case law relating to the UNCITRAL text.

Budget literacy is defined as 'the ability to read, decipher, and understand public budgets to enable and enhance meaningful citizen participation in the budget process'. It is comprised of two main parts - (i) a technical understanding of public budgets, including familiarity with government spending, tax rates and public debt and; (ii) the ability to engage in the budget process, comprising of practical knowledge on day-to-day issues, as well as an elementary understanding of the economic, social and political implications of budget policies, the stakeholders

involved and when and how to provide inputs during the annual budget cycle. Given that no international standards or guidelines have been established for budget literacy education to date, this book seeks to address this gap by taking stock of illustrative initiatives promoting budget literacy for youth in selected countries. The underlying presumption is that when supply-side actors in the budget process -- governments -- simplify and disseminate budget information for demand-side actors -- citizens -- this information will then be used by citizens to provide feedback on the budget. However, since citizens are often insufficiently informed about public budgets to constructively participate in budget processes one way to empower them and to remedy the problem of "budget illiteracy" is to provide budget-literacy education in schools to youth, helping them evolve into civic-minded adults with the essential knowledge needed for analyzing their government's fiscal policy objectives and measures, and the confidence and sense of social responsibility to participate in the oversight of public resources. This book elaborates on approaches, learning outcomes, pedagogical strategies and assessment approaches for budget literacy education, and presents lessons that are relevant for the development, improvement, or scaling up of budget literacy initiatives.

This contributed volume provides 11 illustrative case studies of technological transformation in the global pulp and paper industry from the inception of mechanical papermaking in early nineteenth century Europe until its recent developments in today's business environment with rapidly changing market dynamics and consumer behaviour. It deals with the relationships between technology transfer, technology leadership, raw material dependence, and product variety on a global scale. The study itemises the main drivers in technology transfer that affected this process, including the availability of technology, knowledge, investments and raw materials on the one

hand, and demand characteristics on the other hand, within regional, national and transnational organisational frameworks. The volume is intended as a basic introduction to the history of papermaking technology, and it is aimed at students and teachers as course material and as a handbook for professionals working in either industry, research centres or universities. It caters to graduate audiences in forestry, business, technical sciences, and history.

### **International Practices to Promote Budget Literacy**

Across Asia there is a keen interest in the potential advantages of America's market-led system of voluntary standards and its contribution to US innovation leadership in complex technologies. For its proponents, the US tradition of bottom-up, decentralized, informal, market-led standardization is a "best practice" model for innovation policy. Observers in Asia are, however, concerned about possible drawbacks of a standards system largely driven by the private sector. This study reviews the historical roots of the American system, examines its defining characteristics, and highlights its strengths and weaknesses. A tradition of decentralized local self-government has given voice to diverse stakeholders in innovation. However, a lack of effective coordination of multiple stakeholder strategies constrains effective and open standardization processes. Asian countries seeking to improve their standards systems should study the strengths and

weaknesses of the American system. Attempts to replicate the US standards system will face clear limitations--persistent differences in Asia's economic institutions, levels of development, and growth models are bound to limit convergence to a US-style market-led voluntary standards system.
