The Importance of servo motor sizing should not be underestimated. Proper motor sizing will not only result in significant cost savings by saving energy, reducing purchasing and operating costs, reducing downtime, etc.; it also helps the engineer to design better motion control systems. However, the knowledge of mechanical systems and their influence on motor speed, inertia and torque requirements seems to decline in a world where modern technology aspects, such as tuning and programming, seem to be the main focus. The motor sizing process involves a number of mathematical equations, which are most certainly documented, but not necessarily with the motor sizing process in mind. This book focuses primarily on servo motor sizing and it documents in detail the inertia and torque calculations of standard mechanical components and the motor selection process.

Knock 'em Dead 2013

Major complex problems confront agricultural policy analysts and development specialists regarding the broad issue of 'agricultural technology.' These topics are reviewed in this volume which consists of 37 chapters, developed from papers presented at a conference held at Airlie House, Virginia, near Washington DC. The authors include leading international authorities from the academic sector, World Bank and agricultural research centers. The chapters are grouped into six parts. The first introductory part is followed by investment as the focus of Part II. In Part III a variety of conceptual and

practical issues involved in the transfer of agricultural technology is considered. Part IV includes discussions of concrete technical matters ranging for example from the general to the specific, from plant to animal, and from soil management to irrigation engineering. Emphasis moves from the specifically technological to wider policy issues in Part V and this latter thrust is carried through into the final summarizing section.

A Hatful of Seuss

Saying "I Promise" is the easiest thing to do, its just two tiny words. No one warned me of the weight they hold, that they not only have the power to make something, to give hope, or show devotion. They can destroy everything, cause so much hurt, ruin lives. Every promise holds a toll, if I had known what mine would cost me, I would have walked away. Now I have to pay the price, watch the consequences of my actions unfold. Witnessing someone I love crumble after breaking my oath isn't the hardest thing I've endured, it's being forgotten by the one person that I could never forget.
