Drawing Parallels expands your understanding of the workings of architects by looking at their work from an alternative perspective. The book focuses on parallel projections such as axonometric, isometric, and oblique drawings. Ray Lucas argues that by retracing the marks made by architects, we can begin to engage more directly with their practice as it is only by redrawing the work that hidden aspects are revealed. The practice of drawing offers significantly different insights, not easily accessible through discourse analysis, critical theory, or observation. Using James Stirling, JJP Oud, Peter Eisenman, John Hejduk, and Cedric Price as case studies, Lucas highlights each architect's creative practices which he analyses with reference to Bergson's concepts of temporality and creativity, discussing their manner in which creative problems are explored and solved. The book also draws on a range of anthropological ideas including skilled practice and enchantment in order to explore why axonometrics are important to architecture and questions the degree to which the

With 60 black-and-white images to illustrate design development, this book would be an essential read for academics and students of architecture with a particular interest in further understanding the inner workings of the architectural creative process.

Universities and the Occult Rituals of the Corporate World explores the metaphorical parallels between corporatised, market-oriented universities and aspects of the occult. In the process, the book shows that the forms of mystery, mythmaking and ritual now common in restructured institutions of higher education stem from their new power structures and procedures, and the economic and sociopolitical

factors that have generated them. Wood argues that universities have acquired occult aspects, as the beliefs and practices underpinning present-day market-driven academic discourse and practice weave spells of corporate potency, invoking the bewildering magic of the market and the arcane mysteries of capitalism, thriving on equivocation and evasion. Making particular reference to South African universities, the book demonstrates the ways in which apparently rational features of contemporary Western and westernised societies have acquired occult aspects. It also includes discussion of higher education institutions in other countries where neoliberal economic agendas are influential, such as the UK, the USA, the Eurozone states and Australia. Providing a unique and thought-provoking look at the impact of the marketisation of Higher Education, this book will be essential reading for academics, researchers and postgraduate students engaged in the study of higher education, educational policy and neoliberalism. It should also be of great interest to academics in the fields of anthropology, folklore and cultural studies, as well as business, economics and management.

history and can be used not only to construct but also to rethink historical continuity. Almost-forgotten or sleeping history can be revived to legitimize an imagined future in a political discourse today. History can hardly be neutral or factual because it depends on the historian's, as well the people's, perspective as to what kind of events and sources they combine to make history meaningful. Analysing historical analogies – as embedded in narratives and images of the past – enables us to understand how history and collective memory are managed and used for political purposes and to provide social orientation in time and space. To rethink theories of history, iconology and collective memory, the authors of this volume discuss a variety of cases from Hong Kong, China and Europe.
