A Newbery Medal winning modern classic about a racially divided small town and a boy who runs. Jeffrey Lionel "Maniac" Magee might have lived a normal life if a freak accident hadn't made him an orphan. After living with his unhappy and uptight aunt and uncle for eight years, he decides to run--and not just run away, but run. This is where the myth of Maniac Magee begins, as he changes the lives of a racially divided small town with his amazing and legendary feats.

This edition of Swokowski's text is truly as its name implies: a classic. Groundbreaking in every way when first published, this book is a simple, straightforward, direct calculus text. It's popularity is directly due to its broad use of applications, the easy-to-understand writing style, and the wealth of examples and exercises which reinforce conceptualization of the subject matter. The author wrote this text with three objectives in mind. The first was to make the book more student-oriented by expanding discussions and providing more examples and figures to help clarify concepts. To further aid students, guidelines for solving problems were added in many sections of the text. The second objective was to stress the usefulness of calculus by means of modern

applications of derivatives and integrals. The third objective, to make the text as accurate and error-free as possible, was accomplished by a careful examination of the exposition, combined with a thorough checking of each example and exercise.

“Kitty Burns Florey seems to write from a great wellspring of inner calm that derives from a gleeful appreciation of life's smallest details.” —Richard Russo, Pulitzer Prize-winning author of *Empire Falls*

Once wildly popular in grammar schools across the country, sentence diagramming has fallen out of fashion. But are we that much worse for not knowing the word-mapping method? Now, in this illustrated personal history that any language lover will adore, Kitty Burns Florey explores the rise and fall of sentence diagramming, including its invention by a mustachioed man named Brainerd “Brainy” Kellogg and his wealthy accomplice Alonzo Reed the inferior “balloon diagram” predecessor and what diagrams of sentences by Hemingway, Welty, Proust, Kerouac and

other famous writers reveal about them. Florey also offers up her own common-sense approach to learning and using good grammar. And she answers some of literature's most pressing questions: Was Mark Twain or James Fenimore Cooper a better grammarian? What are the silliest grammar rules? And what's Gertude Stein got to do with any of it?

As a boy in Brooklyn's Red Hook projects, James McBride knew his mother was different. But when he asked about it, she'd simply say 'I'm light-skinned.' Later he wondered if he was different too, and asked his mother if he was black or white. 'You're a human being,' she snapped. 'Educate yourself or you'll be a nobody!' And when James asked what colour God was, she said 'God is the colour of water.' As an adult, McBride finally persuaded his mother to tell her story - the story of a rabbi's daughter, born in Poland and raised in the South, who fled to Harlem, married a black man, founded a Baptist church, and put twelve children through college.

'Immediately acclaimed by Alice Walker and Doris Lessing, *Nervous Conditions* has come to be considered one of Africa's most important novels of the twentieth century. Set in Rhodesia in the 1960s, almost twenty years before Zimbabwe won independence and ended white minority rule, the novel's heroine, Tambudzai Sigauke, embarks on her

education. On her shoulders rest the economic hopes of her parents, siblings, and extended family, and within her burns the desire for "personhood," to no longer be part of such an "undistinguished humanity." With its searing observations, devastating exploration of the state of "not being", wicked humour and astonishing immersion into the mind of a young woman growing up and growing old before her time, the novel is a masterpiece.' Astronomy is written in clear non-technical language, with the occasional touch of humor and a wide range of clarifying illustrations. It has many analogies drawn from everyday life to help non-science majors appreciate, on their own terms, what our modern exploration of the universe is revealing. The book can be used for either a one-semester or two-semester introductory course (bear in mind, you can customize your version and include only those chapters or sections you will be teaching.) It is made available free of charge in electronic form (and low cost in printed form) to students around the world. If you have ever thrown up your hands in despair over the spiraling cost of astronomy textbooks, you owe your students a good look at this one. Coverage and Scope Astronomy was written, updated, and reviewed by a broad range of astronomers and astronomy educators in a strong community effort. It is designed to meet scope and sequence requirements of introductory astronomy courses nationwide. Chapter 1: Science and the Universe: A Brief Tour Chapter 2: Observing

State of the Union Address By Franklin D. (Franklin Delano) Roosevelt I come before you at the opening of the Regular Session of the 73d Congress, not to make requests for special or detailed items of legislation; I come, rather, to counsel with you, who, like myself, have been selected to carry out a mandate of the whole people, in order that without partisanship you and I may cooperate to continue the restoration of our national wellbeing and, equally important, to build on the ruins of the past a new structure designed better to meet the present problems of modern civilization. We are delighted to publish this classic book as part of our extensive Classic Library collection. Many of the books in our collection have been out of print for decades, and therefore have not been accessible to the general public. The aim of our publishing program is to facilitate rapid access to this vast reservoir literature, and our view is that this is a significant literary work, which deserves to be brought back into print after many decades. The contents of the vast majority of titles in the Classic Library have been scanned from the original works. To ensure a high quality product, each title has been meticulously hand curated by our staff. Our philosophy has been guided by a desire to provide the reader with a book that is as close as possible to ownership of the original work. We hope that you will enjoy this wonderful classic work, and

On a warm afternoon in the fall of 1861 Carter Druse is on picket duty on top of a cliff overlooking a valley where five regiments of the Union army are resting. The enemy is near, and the Union force means to surprise them in the night unless “accident or vigilance” forewarns them. Druse had been sleeping but wakes to see a man on a horse surveying the activity in the valley below. He sights his rifle, but hesitates when the rider turns and seems to look straight at him. In a crisis of conscience, Druse questions where his duty lies. Alpha-, Beta- and Gamma-Ray Spectroscopy Volume 1 offers a comprehensive account of radioactivity and related low-energy phenomena. It summarizes progress in the field of alpha-, beta- and gamma-ray spectroscopy, including the discovery of the non-conservation of parity, as well as new experimental methods that elucidate the processes of weak interactions in general and beta-decay in particular. Comprised of 14 chapters, the book presents experimental methods and theoretical discussions

and calculations to maintain the link between experiment and theory. It begins with a discussion of the interaction of electrons and alpha particles with matter. The book explains the elastic scattering of electrons by atomic nuclei and the interaction between gamma-radiation and matter. It then introduces topic on beta-ray spectrometer theory and design and crystal diffraction spectroscopy of nuclear gamma rays. Moreover, the book discusses the applications of the scintillation counter; proportional counting in gases; and the general processes and procedures used in determining disintegration schemes through a study of the beta- and gamma-rays emitted. In addition, it covers the nuclear shell model; collective nuclear motion and the unified model; and alpha-decay conservation laws. The emissions of gamma-radiation during charged particle bombardment and from fission fragments, as well as the neutron-capture radiation spectroscopy, are also explained. Experimentalists will find this book extremely useful.

An award-winning public reader of Homer discusses poetry and the nature of performance with the probing and insightful Socrates in Plato's immortal dialogue. Ion, a professional rhapsode, performer of dramatic recitations of Homer and lecturer on poetry, has a revealing discussion with Socrates. Acclaimed for the power of his performances, Ion becomes so involved in performing that he feels the emotions described in his story and expects them to be transmitted to his audience, inspiring laughter or tears. More than this, Ion claims his understanding of Homer is second to none. Socrates offers a chain of subtly wily questions that cause much reconsideration of the nature of poets, poetry and artistic interpretation. The even, ironic tone of the philosopher makes a sharp and amusing contrast with Ion's pride and energy in this elegant example of Plato's penetrating thought. With an eye-catching new cover, and professionally typeset manuscript, this edition of Ion is both modern and readable.

While there has been increasing interest in recent years in the welfare of farm animals, fish are frequently thought to be different. In many people's perception, fish, with their lack of facial expressions or recognisable communication, are not seen to count when it comes to welfare. Angling is a major sport, and fishing a big industry. Millions of fish are caught on barbed hooks, or left to die by suffocation on the decks of fishing boats. Here, biologist Victoria Braithwaite explores the question of fish pain and fish suffering, explaining what we now understand about fish behaviour, and examining the related ethical questions about how we should treat these animals. She asks why the question of pain in fish has not been raised earlier, indicating our prejudices and assumptions; and argues that the latest and growing scientific evidence would suggest that we should widen to fish the protection currently given to birds and mammals.

their roles as women and mothers. After being overshadowed by the Civil War, the novel was rediscovered in the late 20th century and since then hasn't been out of print ever. It is one of the seminal books written on the theme of slavery from a woman's point of view and appreciated worldwide academically as well. Excerpt: "Reader be assured this narrative is no fiction. I am aware that some of my adventures may seem incredible; but they are, nevertheless, strictly true. I have not exaggerated the wrongs inflicted by Slavery; on the contrary, my descriptions fall far short of the facts. I have concealed the names of places, and given persons fictitious names. I had no motive for secrecy on my own account, but I deemed it kind and considerate towards others to pursue this course." Harriet Jacobs (1813–1897) was an African-American writer who was formerly a fugitive slave. To save her family and her own identity from being found out, she used the pseudonym of Linda Brent and wrote secretly during the night.
