People have dreamed of returning to their youth to correct their errors and naiveté. Dr. Frank Dodd acquired that chance but for a different reason. He and his wife, Dr. Beverly Dodd, are retired professors from a small north Florida College. They had just started enjoying retirement when they found Beverly had inoperable cancer and would soon die. Frank bemoaned the fact he hadn't insisted on Beverly seeing a doctor a year earlier when she could have been cured. While in a chat room two

fellow scientists heard Frank discuss his regrets at not getting his wife help in time and how he wished he could go back in time to court and marry her again, only this time get her to the doctors in time to be cured. The two scientists have been doing experiments in time travel and knowledge transfer between brains. Frank agreed to be used as a guinea pig to be sent back to the time of his youth and to implant his knowledge into himself as a boy. He arrives in 1941 with computers and other modern equipment to sell to the government and industry and invest the proceeds for the benefit of all three while living his life over, striving to have the same experiences and doing the same things from his former youth, but this time avoiding the mistakes of his former life. The dilemma occurs when he falls in love with a woman he meets in this new life. Should he remain single and wait for 15 years to meet and court his wife again or marry the one he falls in love with during his present time.

Every day, billions of photographs, news stories, songs, X-rays, TV shows, phone calls, and emails are being scattered around the world as sequences of zeroes and ones: bits. We can't escape this explosion of digital information and few of us want to-the benefits are too seductive. The technology has enabled unprecedented innovation, collaboration, entertainment, and democratic participation. But the same engineering marvels are shattering centuries-old assumptions about privacy, identity, free expression, and personal control as more and more details of our lives are captured as digital data. Can you control who sees all that personal information about you? Can email be truly confidential, when nothing seems to be private? Shouldn't the Internet be censored the way radio and TV are? is it really a federal crime to download music? When you use Google or Yahoo! to search for something, how do they decide which sites to show you? Do you still have free speech in the digital world? Do you have a voice in shaping government or corporate policies about any of this? Blown to Bits offers provocative answers to these questions and tells intriguing real-life stories. This book is a wake-up call To The human consequences of the digital explosion.

TiVo For Dummies

Road & Track

Most Billiard instructional guides focus solely on the physical aspects of the game - the techniques, the shots, and the rules. Zen Pool teaches you all of these practical insights and skills, then goes one step further - showing you how to improve your total game by increasing your physical, mental, and spiritual awareness in the present moment. Many readers have described remarkable improvements after reading the lessons taught in this book - and many professional players have reported winning more tournaments. Zen Pool is your own private success coach: It will guide you to new levels of play and give you the knowledge you need to vastly improve your game. The wisdom and secrets herein have been distilled from a lifelong and fruit bearing quest, including study with, and of, many pool masters. So open Zen Pool, begin your journey, and let three-time national billiards champion Max Eberle awaken the master within you.

RMS Titanic has had more written about her than any other ship but, surprisingly, there is little information directed at the modelmaker. This superb book contains all the information needed to build a highly accurate model, down to the tiniest details of the hull's rivets. The work is based on the author's remarkable 18ft model, built to 1/48 scale, and specially commissioned for a travelling exhibition in North

America. The book contains a mass of practical information on how to construct every part of the great liner and is equally applicable to a small static bread-and-butter display model as to a large working version. Profusely illustrated with close-up photographs, detailed drawings and a large collection of photographs of the prototype herself, the book also contains a complete set of plans considered to be the most accurate yet drawn. With this mix of practical information, rare photographs and highly detailed drawings the book can appeal to all Titanic enthusiasts as well as to ship modellers of every sort.
