Private law has long been the focus of efforts to explain wider developments of law in an era of globalisation. As consumer transactions and corporate activities continue to develop with scant regard to legal and national boundaries, private law theorists have begun to sketch and conceptualise the possible architecture of a transnational legal theory. Drawing a detailed map of the mixed regulatory landscape of 'hard' and 'soft' laws, official, unofficial, direct and indirect modes of regulation, rules, recommendations and principles as well as exploring the concept of governance through disclosure and transparency, this book develops a theoretical framework of transnational legal regulation. Rough Consensus and Running Code describes and analyses different law-making regimes currently observable in the transnational arena. Its core aim is to reassess the transnational regulation of consumer contracts and corporate governance in light of a dramatic proliferation of rule-creators and compliance mechanisms that can no longer be clearly associated with either the 'state' or the 'market'. The chosen examples from two of the most dynamic legal fields in the transnational arena today serve as backdrops for a

comprehensive legal theoretical inquiry into the changing institutional and normative landscape of legal norm-creation.

Law Commission: Fiduciary Duties of Investment Intermediaries: A Consultation Paper - Consultation Paper No 215

Over recent decades corporate governance has developed an increasingly high profile in legal scholarship and practice, especially in the US and UK. But despite widespread interest, there remains considerable uncertainty about how exactly corporate governance should be defined and understood. In this important work, Marc Moore critically analyses the core dimensions of corporate governance law in these two countries, seeking to determine the fundamental nature of corporate governance as a subject of legal enquiry. In particular, Moore examines whether Anglo-American corporate governance is most appropriately understood as an aspect of 'private' (facilitative) law, or as a part of 'public' (regulatory) law. In contrast to the dominant contractarian understanding of the subject, which sees corporate governance as an institutional response to investors' market-driven private preferences, this book defines corporate governance as the manifestly public problem of securing the legitimacy – and, in turn, sustainability – of discretionary administrative power within large economic organisations. It emphasises the central importance of formal accountability norms in legitimating corporate managers' continuing possession and exercise of such power, and demonstrates the structural necessity of mandatory public regulation in this regard. In doing so it highlights the significant and conceptually irreducible role of the regulatory state in determining the key contours of the Anglo-American corporate governance framework. The normative effect is to extend the state's acceptable policy-making role in corporate governance, as an essential supplement to private ordering dynamics. Shortlisted for The Peter Birks Prize for Outstanding Legal Scholarship 2013.

Cases and Materials on Company Law

The understanding of subjective perceptions of wellbeing, that is, the perceived needs and current levels of satisfactions of people, could provide valuable information for policy and decision makers. It would allow for the mapping of the envisaged impacts of policy against things that people value and care about, thus providing information about the positive and negative potential of different policy options to impact upon human welfare. In this book, Dr Silva Larson takes us on a journey of explorations into the things that are important to people. She argues that an approach which takes into account both what people value most and how satisfied they are with the current state of affairs would assist decision makers with identifying perceived regional priorities. Further, she proposes and describes one such approach, that of using a

quantitative composite value that combines both types of information, and demonstrates, using two shires in the Great Barrier Reef region of Australia as examples, how this can be done. The resulting “action lists” identify and quantify the unsatisfied needs of most importance to most people in the region, that is, factors that have high potential to improve the quality of life of residents, if restored.

Business Law and the Legal Environment

As attention moves rapidly towards comparative approaches, the research and teaching of company law has somehow lagged behind. The overall purpose of this book is therefore to fill a gap in the literature by identifying whether conceptual differences between countries exist. Rather than concentrate on whether the institutional structure of the corporation varies across jurisdictions, the objective of this book will be pursued by focusing on specific cases and how different countries might treat each of these cases. The book also has a public policy dimension, because the existence or absence of differences may lead to the question of whether formal harmonisation of company law is necessary. The book covers 10 legal systems. With respect to countries of the European Union, it focuses on the most populous countries (Germany, France, the UK, Spain, Italy and Poland) as well as two smaller Member States (Finland and Latvia). In addition, the laws of two of the world's largest economies (the US and Japan) are included for the purposes of wider comparison. All of these jurisdictions are subjected to scrutiny by deploying a comparative case-based study. On the basis of these case solutions, various conclusions are reached, some of which challenge established orthodoxies in the field of comparative company law.

An effective system of corporate governance has both internal and external aspects that have to be sufficiently responsive if governance is to succeed. In this book, Ahmed Naciri examines these two core aspects or the latest buzzword in business and management theory. Internal aspects include ownership structure, the board of directors and committees, internal control, risk management, transparency and financial reporting. External aspects can either be market-oriented, or can take the form of credit ranking, and/or social requirements. Due to the original orientation of the Sarbanes/Oxley Law, concentrating solely on financial disclosure and given its decisive and tremendous influence on all other similar corporate governance legislations all over the world, most writings on corporate governance have dealt with solely internal corporate governance mechanisms. This book aim is to fill up the gap by using a systemic approach and giving a global picture of the corporate governance theoretical foundations, mainly by putting the emphasis on its double dimension: internal and external.

This collection of essays by a distinguished team of authors drawn from a variety of disciplines seeks to build on the insights of this economic analysis and broaden understanding by examining the company in a wider historical, legal, political, and sociological context.
