On the morning of her twelfth birthday, Mary Campbell gets angry with her mother and storms out of the cabin—never to return. As she picks wild strawberries and plans her apology, Mary is captured by Delaware Indians and plunged into a life that is fearsome, strenuous, and utterly unlike the one she knows, beginning with the journey on foot from Pennsylvania to the Delawares' new home in Ohio.

Territory. As the idea of escape becomes less feasible and less urgent, Mary finds herself adapting to the routines, traditions, and beliefs of her captors, and discovers within herself reserves of strength she hadn't known were hers. The life of the real Mary Campbell, taken by Delawares in 1759, is the basis for this enthralling, historically detailed adventure, and for the perceptive portrait of a young woman finding her place in a culture vastly different from her own.

In what ways do films influence and interact with society? What social forces determine the kinds of movies that get made? How do movies reinforce—and sometimes overturn—social norms? As societies evolve, do the films that were once considered 'great' slip into obscurity? Which ones? Why? These questions, and many others like them, represent the mainstream of scholarly film studies today. In *Engaging Cinema*, Bill Nichols offers the first book for introductory film students that tackles these topics head-on. Published in a handy 'trade paperback' format, *Engaging Cinema* is inexpensive and utterly unique in the field—a perfect

complement to or replacement for standard film texts.

Their much-loved, old-fashioned robot, Grumps, is running down and can't be repaired, so a scientist friend loans them EGR3, an experimental new robot to help Grumps. EGR3, known as Eager, learns from his experiences, as a child would. He feels emotions—wonder, excitement, and loss. When the ultra high-tech, eerily human BDC4 robots begin to behave suspiciously, Eager and the Bells are drawn into a great adventure that is sometimes dark and often humorous. This was my first book and a true labor of love. I spent decades studying steam and the work of Dead Men, in both old buildings and on library shelves. I traveled the country, haunting used-book stores, looking for engineering books that held the answers to questions that nagged at me. I was obsessed with this topic, and when I finally sat to write, I poured all that I had learned into this book, and as I wrote, I tried my best to make the words sound good to you - like we were together and having a conversation. I wanted you to know what I know and I wanted you to be able to do what I can do when it comes to old steam systems. This book arrived in 1992 and has since gone through dozens of printings. We've sold it in every state as well as in foreign countries. Steam heat is everywhere there are old buildings, so why shouldn't you be the one with the answers? Dan Holohan

### **How I Fall**

This volume in the JPS Series is intended to help crystallize the emergence of a new field, "Developmental Social Cognitive Neuroscience," aimed at elucidating the neural correlates of the development of socio-emotional experience and behavior. No one any longer doubts that infants are born with a biologically based head start in accomplishing their important life tasks--genetic resources, if you will, that are exploited differently in different contexts. Nevertheless, it is also true that socially relevant neural functions develop slowly during childhood and that this development is owed to complex interactions among genes, social and cultural environments, and children's own behavior. A key challenge lies in finding appropriate ways of describing these complex interactions and the way in which they unfold in real developmental time. This is the challenge that motivates research in developmental social cognitive neuroscience. The chapters in this book highlight the latest and best research in this emerging field, and they cover a range of topics, including the typical and atypical development of imitation, impulsivity, novelty seeking, risk taking, self and social awareness, emotion regulation, moral reasoning, and executive function. Also addressed are the potential limitations of a neuroscientific approach to the development of social

cognition. Intended for researchers and advanced students in neuroscience and developmental, cognitive, and social psychology, this book is appropriate for graduate seminars and upper-level undergraduate courses on social cognitive neuroscience, developmental neuroscience, social development, and cognitive development.
