"The People of the Planet Clarion" was the last book by Truman Bethurum, summing up his feelings about the strange visitors and their Captain, the voluptuous Aura Rhanes (who may have been Aurora Thor, daughter of the Venusian thinker Valiant Thor, according to the 1982 introduction by Gray Barker). Includes 44 pages of Bethurum's autobiography, explaining his early life and influences. A rare reprint from New Saucerian of one of the more rare Saucerian contactee titles. Today several ideas and conceptions regarding ancient-traditions in the society are taken as correctly right, and therefore derivatives activities considered as granted, however their interpretation and use could be put in debate as we never were told the true and sometimes even the real history was never mentioned. The human reason and trust was betrayed by rulers with the help of religion, transforming "rationality" into blind faith into false religious statements about our social role. Several facts were adapted conveniently by historian to the politicians in powers, it was not always appropriate or obviously as more of the people thing they were. For example, the legacy of religion, Calvinism, as one of religious which tough people about predestination, and the peoples' impossibility to change their destiny, thus,

Throughout the United States, at any given time of year, there are festivals, concerts, fairs, sporting events, and many other large and small events that gather or have the potential to gather large crowds. Under normal conditions, these events go on with few or no problems. When something goes wrong, however, either as a result of a natural hazard or a manmade hazard, then local emergency management becomes involved. These mass gatherings are also potential targets for terrorists. Multiple deaths and injuries at large public events have occurred consistently and over a wide spectrum of countries and types of events. Certain highly competitive sports events, particularly soccer, and rock concerts and festivals tend to produce spectator-generated incidents, while air shows and auto races tend to produce more participant-generated occurrences. In some instances, advanced assessment of, and planning for, these events failed to occur, or when they did, they failed to identify the potential for disaster, or mitigating or coping strategies for a major incident. The purpose of this manual is the prevention of injury, suffering, or death that may occur as a result of poor planning or preventable incidents at public events. This manual is intended to provide

guidance for the management of risks associated with conducting events that involve mass gatherings of people and assist planners and organizers in making such events safe and successful. FEMA has prepared this manual for use by anyone planning or conducting a special event or mass gathering. This manual is intended to enable its users to ensure that adequate measures and systems are in place to prevent, reduce, and provide care for injuries, illness, and suffering that may occur. Many people, in addition to health personnel, contribute significantly to the success of a public event. Therefore, FEMA anticipates that this manual will be distributed to event promoters, managers, public and private organizations, emergency service personnel, government bodies, and any individual or organization that contributes to the planning of events. Wide distribution is encouraged, providing that individuals understand that the detailed contents of the manual are directed principally at managing the health and safety aspects of the event for all participants, officials, and spectators.

Hepatology has come of age in the last decades. Biology of the liver has flourished long before. As the largest homogeneous organ of the body the liver served as useful model in the development of biochemistry and related disciplines. Only gradually were these biological investigations applied to the clinical study of liver disease. This was particularly stimulated by the recognition that in the greater part of the world, the developing countries and what we now call the Third World, liver disease represents a major threat to overall public health. It leads to morbidity and mortality of persons in their productive years from liver cancer, cirrhosis and parasitic disease, particularly, schistosomiasis. Moreover, the growing emphasis on the social impact of diseases focused on disorders of the liver because malnutrition, poverty, and drug addiction contribute greatly to their spread. This is compounded by the increase of alcohol abuse, recently on the rise even in the developing countries. Concern with environmental pollution has also raised the interest in liver diseases, in part because the liver acts as a guardian against polluting chemicals and in part because it is considered, possibly to an exaggerated degree, a vulnerable target of such chemicals.

This edition of Othello reprints the Bevington edition of the play accompanied by six sets of thematically arranged primary documents and illustrations designed to facilitate many different approaches to Shakespeare. The text includes tracts on marriage, travel literature, military manuals, maps, ballads, royal proclamations, early modern descriptions of Africa and the Middle East, nineteenth-century scripts for performances of Othello, and scenes from contemporary re-envisionings of the play. The primary documents contextualize race and religion in the Renaissance, gender relations, military life, the passions, the notion of the "Other" in early modern England, and the afterlife of Othello on the stage.
