The book, presenting the proceedings of the 2018 Future Technologies Conference (FTC 2018), is a remarkable collection of chapters covering a wide range of topics, including, but not limited to computing, electronics, artificial intelligence, robotics, security and communications and their real-world applications. The conference attracted a total of 503 submissions from pioneering researchers, scientists, industrial engineers, and students from all over the world. After a double-blind peer review process, 173 submissions (including 6 poster papers) have been selected to be included in these proceedings. FTC 2018 successfully brought together technology geniuses in one venue to not only present breakthrough research in future technologies but to also promote practicality and applications and an intra- and inter-field exchange of ideas. In the future, computing technologies will play a very important role in the convergence of computing, communication, and all other computational sciences and applications. And as a result it will also influence the future of science, engineering, industry, business, law, politics, culture, and medicine. Providing state-of-the-art intelligent methods and techniques for solving real-world problems, as well as a vision of the future research, this book is a valuable resource for all those interested in this area.

The significance of business-led corporate responsibility coalitions is indisputable. The WBCSD has 200 member companies with combined annual revenues of US\$7 trillion; the UN Global Compact has almost 8,000 corporate members, over two-thirds of them from developing countries. It is estimated that there are more than 110 national and international generalist business-led CR coalitions. But there is now urgent need for informed and balanced analysis of their achievements, their progress and their potential. Why did these coalitions start and grow? What have been their impacts? Where are they heading now? Where should they be going? What is the future? In a period of austerity, the business and public sector must decide whether funding these coalitions is a priority. To meet current crises, there will have to be a great deal more business involvement; but efforts of individual corporations will not be sufficient. There is also a need for far more collective action among companies and more collaborative action between different sectors of society. Business-led CR coalitions with their decades of convening experience could play an important role in this process - if they are fit for purpose going forward. Authors David Grayson and Jane Nelson have been actively involved in such coalitions for decades. In *Corporate Responsibility Coalitions* they first explore the past, present and future of these coalitions: the emergence of new models of collective corporate action over the past four decades; the current state of play, and the increasing number, diversity and complexity in terms of how they not only network with each other but also engage in a much broader universe of institutions that are promoting responsible business practices. In addition, the book provides in-depth profiles of the most strategic, effective and long-standing coalitions, including: Business for Social Responsibility; Business in the Community; CSR Europe; Instituto Ethos; International Business Leaders Forum; the UN Global Compact; and the WBCSD. This book will be required reading for key supporters and potential partners of such coalitions in companies, governments, international development agencies, foundations, non-governmental organizations, academic institutions and think-tanks. It also aims to inspire a future generation of leaders to be more aware of the role of business as a partner in driving more inclusive, green and responsible growth, and to help them develop new types of leadership skills so that they can be effective in finding multi-stakeholder solutions to complex and systemic challenges.

The field of artificial intelligence (AI) has made tremendous advances in the last two decades, but as smart as AI is now, it is getting smarter and becoming more autonomous. This raises a host of challenges to current legal doctrine, including whether AI/algorithms should count as 'speech', whether AI should be regulated under antitrust and criminal law statutes, and whether AI should be considered as an agent under agency law or be held responsible for injuries under tort law. This book contains chapters from US and international law scholars on the role of law in an age of increasingly smart AI, addressing these and other issues that are critical to the evolution of the field.

A powerful polemic on the major threats facing the world today and how they can be overcome. Our world is facing catastrophes of many kinds, from the climate crisis to global outbreaks of deadly diseases. But could we look back at the collapse of previous civilisations to see what lessons might be learned? The explorer and campaigner Robin Hanbury-Tenison believes we urgently need to tackle the four harbingers of catastrophe: The White Horse of Pestilence and Pandemics – many remote tribal societies have lives that are healthier than ours – what can we learn from them? The Red Horse of War – can we avoid conflict through promoting prosperity and renewable energy for all? The Black Horse of Famine – is now the time to use technology we've had since World War II to influence the weather? The Pale Horse of Death – will geoengineering help to undo the appalling pollution we are inflicting on the planet, especially the oceans? The lessons of Taming The Four Horsemen are clear: if we humans are to survive we need to make transformative changes now.

## **Taming the Four Horsemen**

Businesses need a new type of problem solving. Why? Because they are getting people wrong. Traditional problem-solving methods taught in business schools serve us well for some of the everyday challenges of business, but they tend to be ineffective with problems involving a high degree of uncertainty. Why? Because, more often than not, these tools are based on a flawed model of human behavior. And that flawed model is the invisible scaffolding that supports our surveys, our focus groups, our R&D, and much of our long-term strategic planning. In *The Moment of Clarity*, Christian Madsbjerg and Mikkel Rasmussen examine the business world's assumptions about human behavior and show how these assumptions can lead businesses off track. But the authors chart a way forward. Using theories and tools from the human sciences—anthropology, sociology, philosophy, and psychology—*The Moment of Clarity* introduces a practical framework called sensemaking. Sensemaking's nonlinear problem-solving approach gives executives a better way to understand business challenges involving shifts in human behavior. This new methodology, a fundamentally different way to think about strategy, is already taking off in Fortune 100 companies around the world. Through compelling case studies and their direct experience with LEGO, Samsung, Adidas, Coloplast, and Intel, Madsbjerg and Rasmussen will show you how to solve problems as diverse as setting company direction, driving growth, improving sales models, understanding the real culture of your organization, and finding your way in new markets. Over and over again, executives say the same thing after engaging in a process of sensemaking: "Now I see it . . ." This experience—the moment of clarity—has the potential to drive the entire strategic future of your company. Isn't it time you and your firm started getting people right? ## 7 Heavenly Habits of Innovation

In this inspiring book, Jackson Galaxy, star of Animal Planet's hit television show My Cat from Hell, tells the story of the cat who saved his life and set him on the path to becoming America's Cat Daddy. When Benny arrived in his life, Galaxy was a down-and-out rock musician with not much more going on than a part-time job at an animal shelter and a drug problem. Benny's previous owner brought the cat to the shelter in a cardboard box to give him up. He had seen better days - his pelvis had just been shattered by the wheels of a car, and his owner insisted he'd been 'unbondable' from day one. Nothing could have been further from the truth. An inspiring account of two broken beings who fixed each other, Cat Daddy is laced throughout with Galaxy's amazing 'Cat Mojo' advice for understanding what cats need most from us humans in order to live happier, healthier lives. 'A joy . . . Sometimes the biggest stories are actually the smallest ones - one man, one cat, and a quiet love that was large enough to save them both.' Gwen Cooper, author of the New York Times bestseller Homer's Odyssey and Love Saves the Day 'This book is no ordinary cat memoir, nor is it an ordinary cat advice book. It is an inspirational tour de force that offers an intimate glimpse of Jackson, the man, and Jackson, the Cat Daddy.' Ingrid King, publisher and founder, The Conscious Cat, and award-winning author of Buckley's Story- Lessons from a Feline Master Teacher Includes a new afterword by the author

What is the insight behind the Dyson Hairdryer, Tidal Music Streaming, Lego Friends or the Nike AirAdapt 2.0 self lacing trainers? This book explores not only the case studies, but the consumer insights and value propositions behind each example. This is the second book by Mat Shore the renowned consumer insight and value proposition expert. The 7 Heavenly Habits of innovation explores the traits that make successful innovators achieve great things when others fail. Written in Mat's inimitable tongue-in-cheek and irreverent style, this book showcases multiple case studies of elegant and inspired examples of innovation. As you'd expect if you've read Mat's blog or attended his speeches, it also includes a litany of tragic cases where these traits were clearly far from evident. Mat has trained 35,000 people in 27 countries over the last 15 years and his expertise had been sought in the boardroom of major blue chip companies. His clients include GE, Philips, Samsung, Citrix, Lafarge, Electrolux, Nespresso. He has written for the Times of London on innovating and trained the faculty of Washington University on the subject of insight and value proposition development. You can read the companion piece to this book, The 7 Deadly Sins of Innovation, or acquire both together in the compendium version.
