Around the world, more young people than ever before are attending university. Student numbers in South Africa have doubled since democracy and for many families, higher education is a route to a better future for their children. But alongside the overwhelming demand for higher education, questions about its purposes have intensified. Deliberations about the curriculum, culture and costing of public higher education abound from student activists, academics, parents, civil society and policy-makers. We know, from macro research, that South African graduates generally have good employment prospects. But little is known at a detailed level about how young people actually make use of their university experiences to craft their life courses. And even less is known about what happens to those who drop out. This accessible book brings

together the rich life stories of 73 young people, six years after they began their university studies. It traces how going to university influences not only their employment options, but also nurtures the agency needed to chart their own way and to engage critically with the world around them. The book offers deep insights into the ways in which public higher education is both a private and public good, and it provides significant conclusions pertinent to anyone who works in – and cares about – universities.

This work responds to the need to find, in a sole document, the affect of oxidative stress at different levels, as well as treatment with antioxidants to revert and diminish the damage. Oxidative Stress and Chronic Degenerative Diseases - a Role for Antioxidants is written for health professionals by researchers at diverse educative institutions (Mexico, Brazil, USA, Spain, Australia, and Slovenia). I would like to underscore that of the 19 chapters, 14 are by Mexican researchers, which demonstrates the commitment of Mexican institutions to academic life and to the prevention and treatment of chronic degenerative diseases.

Companies in the business of providing knowledge -- for profit -- will dominate the 21st-century global marketplace. Can your business compete? In today's fast-paced world, knowledge is doubling nearly every seven years, while the life cycle of a business grows increasingly shorter. The best way -- and perhaps the only way -- to succeed is to become a "knowledge-based" business. In *The Monster Under the Bed*, Stan Davis and Jim Botkin show how:

- * Every business can become a knowledge business
- * Every employee can become a knowledge worker
- * Every customer can become a lifelong learner

The Monster Under the Bed explains why it's necessary for businesses to educate employees and consumers. Consider the fact that the vast majority of 60 million PC owners, for example, learned to use their computers not at school but at work or at home. Davis and Botkin explain how any high-tech, low-tech, or no-tech company can discover new markets and create new sources of income by building future business on a knowledge-for-profit basis -- and how, once it does, its competitors must follow or fail. Filled with examples of high-profile companies that are riding the crest of this powerful wave, *The Monster Under the Bed* is an insightful exploration of the many ways that the knowledge-for-profit revolution will profoundly affect our businesses, our educational processes, and our everyday lives.

In this radically conservative book, the authors

advocate a back-to-basics approach to marketing that replaces the relentless quest for differentiation with a relentless focus on these types of basic customer needs. The authors' research shows that most companies have been ignoring the basics for too long. At the heart of the authors' approach is a view of why customers buy what they do. Barwise and Meehan argue that marketers must understand what customers want from the entire product or service category. So rather than focus on new luxury attributes for a specific car —marketers need to understand what basic needs customers have for automobiles in general (ie: safety, handling, etc). Once they figure that out—they need to deliver on those basic needs better than everyone else.

When Harry Met Molly

The 650th anniversary of the foundation of Wingfield College was the occasion for a special two-day

symposium marking the culmination of a three-year UEA-funded research project into the college and castle. The building projects of the late medieval aristocracy focused on their homes and the monasteries, churches or chantry foundations under their patronage where their family were buried and commemorated. This commemoration allowed a visual celebration of their achievements, status and lineage, the scale and prestige of which reflected on the fortunes of the family as a whole. Wingfield is explored in the context of both the actual building of the castle, chantry chapel and the college, and that of the symbolic function of these as a demonstration of aristocratic status. The contributions to this book examine many topics which have hitherto been neglected, such as the archaeology of the castle, which had never been excavated, the complex history of the college's architecture, and the detailed study of the monuments in the church. The latest techniques are used to reconstruct the college and castle, with a DVD to demonstrate these. And the context of the family and its fortunes are explored in chapters on the place of the de la Poles in fifteenth century history, as soldiers, administrators and potential claimants to the throne.

This book is based to a great extent on the biochemical and molecular mechanisms of tolerance of commonly encountered abiotic stresses in nature. This book will deal with increasing temperature, water, salinity, and heavy metals and ozone, and how these abiotic stresses can be managed by microbes through their alleviation mechanisms. Water stress includes both drought and flooding. 1st section outlines the relevance of abiotic stresses in present day environmental conditions. The 2nd section deals with three major stresses - temperature, water and salinity and the metabolic changes and protective adjustments in plants for withstanding these stresses. The 3rd section deals with the role of heavy metals and ozone. The final section is devoted to general abiotic stresses and their alleviation by microbes. These offer a cost-effective and eco-friendly means of combating different stresses.

The Craft & Art of Bamboo

Genius. With hints of madness and mystery, moral license and visionary force, the word suggests an almost otherworldly power: the power to create, to divine the secrets of the universe, even to destroy. Yet the notion of genius has been diluted in recent times. Today, rock stars, football coaches, and entrepreneurs are labeled 'geniuses,' and the word is applied so widely that it has obscured the sense of special election and superhuman authority that long

accompanied it. As acclaimed historian Darrin M. McMahon explains, the concept of genius has roots in antiquity, when men of prodigious insight were thought to possess—or to be possessed by—demons and gods. Adapted in the centuries that followed and applied to a variety of religious figures, including prophets, apostles, sorcerers, and saints, abiding notions of transcendent human power were invoked at the time of the Renaissance to explain the miraculous creativity of men like Leonardo and Michelangelo. Yet it was only in the eighteenth century that the genius was truly born, idolized as a new model of the highest human type. Assuming prominence in figures as varied as Newton and Napoleon, the modern genius emerged in tension with a growing belief in human equality. Contesting the notion that all are created equal, geniuses served to dramatize the exception of extraordinary individuals not governed by ordinary laws. The phenomenon of genius drew scientific scrutiny and extensive public commentary into the 20th century, but it also drew religious and political longings that could be abused. In the genius cult of the Nazis and the outpouring of reverence for the redemptive figure of Einstein, genius achieved both its apotheosis and its Armageddon. The first comprehensive history of this elusive concept, *Divine Fury* follows the fortunes of genius and geniuses through the ages down to the present day, showing how—despite its many permutations and recent democratization—genius remains a potent force in our lives, reflecting modern needs, hopes, and fears.

Welcome to the proceedings of ICCHP 2008. We were proud to welcome participants from more than 40 countries from all continents to ICCHP. The International Programme Committee, encompassing 102 experts from all over the world, selected 150 full and 40 short papers out of 360 abstracts submitted to ICCHP. Our acceptance rate of about half of the submissions, demonstrates the scientific quality of the programme and in particular the proceedings you have in your hands. An impressive group of experts agreed to organize “Special Thematic Sessions” (STS) for ICCHP 2008. The existence of these STS sessions helped to bring the meeting into sharper focus in several key areas of assistive technology. In turn, this deeper level of focus helped to bring together the state-of-the-art and mainstream technical, social, cultural and political developments. Our keynote speaker, Jim Fruchterman from BeneTech, USA highlighted the importance of giving access to ICT and AT at a global level. In another keynote by Harold Thimbleby, Swansea University, UK, the role of user-centred design and usability engineering in assistive technology and accessibility was addressed. And finally, a combination keynote and panel discussion was reserved for WAI/WCAG2.0, which we expect to be the new reference point for Web accessibility from the summer of 2008 and beyond.
